THERE is at least one agricultural college that has been abundantly able to demonstrate its ability to not only tell others how to make money by farming, but also to make money for itself on its farm. The Clemson Agricultural College of South Carolina has accomplished this feat, as shown by the figures which have just been given out by L. G. Brandon, superintendent of the college farm. Among other things it is shown that the farm now has to its credit about \$3,500 and has about \$2,000 worth of corn and hay for sale. The farm, which is under the general direction of Prof. J. N. Harper, director of the experiment station and of the agricultural department, had a most successful year in 1913. One of the most important factors in the production of large crops on this farm was the use of modern machinery.

In 1913 the college farm produced 8,000 bushels of corn, 475 tons of silage, 4,500 bushels of oats, 24 bales of cotton (on 18 acres), 150 bushels of peas and enough hay to feed 40 head of mules and horses, with a surplus of six car loads for sale.

This year the farm will make about 4,500 bushels of oats on 85 acres. These oats are about ready for cutting and three large binders will be used in this work. They are pure appler oats and will be sold as seed. When the oats are well out of the way these 85 acres will be sown in peas and sorghum for hay. In addition the farm is being planted in 265 acres of corn and 65 acres of cotton.

The horse and man power used in preparing and planting this acreage is as follows: One thirty-horsepower, oil pull tractor; 18 mules, working six two-horse plows; two two-row planters and a smoothing harrow and 14 men.

The tractor used on the college farm has a plowing capacity of one acre in about fifty minutes and can cover nine acres a day under ordinarily favorable circumstances. It is an oil-pull tractor and practically all danger to the crops from fire is eliminated.

The plowing capacity of the farm is approximately 100 acres a week, enabling the superintendent and his men to seize on every favorable season for work, no matter how short it may be. The use of modern farm machinery eliminates delays and often means saving crops which might otherwise be lost because seasons favorable to working were too short to allow the necessary acreage to be covered by inferior machinery. Another advantage of a machine such as a tractor on large farms is the elimination of some of the men and mules, two of the most expensive factors in making crops.

**Greatest Bargain
ALLOWAY
Has Ever Offered**

Think of it—a real, well-made, easy to operate, Portable Elevator, only \$79.50—just about half what others charge! It's the man's turning sensation ever offered. It puts an elevator in everyone's reach. It's no longer a luxury that on account of high prices only a few could afford. Farmers who have seen it wonder how I can make it so good and sell it so cheap. Let me tell you why.

\$79.50

The facts are—I am building just 4,000; no more. Going like hot cakes now—get your reservation in. My price to you on one is based on that quantity, or the same on one as if you'd take the whole 4,000. You buy direct from factory and pay for actual cost of labor, material and

Lowest price ever made; a price that every farmer can afford.

THROW AWAY YOUR SCOOP!

It's a back-breaker, an instrument of torture. My Portable Elevator saves time—30 minutes to an hour on every load cribbed, which gives you that extra time in the cornfield and thereby pays for machine first year and makes you money. Adds years to your life.

Guaranteed As Good As Any Better Than Most

The Galloway Portable Elevator is no experiment; it's tried and tested—guaranteed—backed by a \$25,000 bond. Sold on 30 to 60 days' trial with the understanding that if it's not all we claim, if it fails to work as good as any you ever saw or tried at any price, I will take it back and pay the freight both ways.

Better still. I have 5 selling plans—cash or credit—which makes it still easier for you to own an elevator. Don't buy any make or kind until you first get my proposition. Write today for illustrated circular and full particulars about the elevator that's creating a sensation everywhere. Address

HOME-MADE CIDER PRESS

By A. C. McPherson

TO MAKE the press use a plank 2 by 12 inches and 12 feet long. Soft wood will do, but hard wood is better. Saw off two pieces 2 feet long. Cut a groove in each of the long pieces 4 inches from the end and $\frac{1}{2}$ inch deep and as wide as the thickness of the short pieces. Then spike the four pieces together. Get a carpenter's iron bench screw, which will cost about \$1, which does for the screw.

For the cheese crib get two hoops made of heavy hoop iron, with holes punched about $1\frac{1}{2}$ inches apart, and fill them with staves about 2 feet long and $1\frac{1}{4}$ inches wide, and with small nails or screws fasten the staves inside the hoops, leaving them $\frac{1}{4}$ inch apart, and with a false bottom to catch and conduct the cider the press is complete.

For the grinder a flour or salt barrel will do. Saw it in two at the bulge, then take a board and saw out a false

head a little smaller than the barrel head and tack it on the outside of the tub head. This is to support the tub bottom.

Next take a piece of scantling 2 by 4 inches and 3 feet long. Taper one end round the tip. A block of hard wood, with a hole bored in $\frac{1}{2}$ inch deep for the screw to work in, must be made, to keep it from binding. Such a press can be made for three or four dollars, if, indeed, most of the material can not be found on the farm.

Bushels of apples which might be made into vinegar go to waste on many farms owing to the absence of cider mills or apparatus for the purpose. Cider can be made at any time after fruit ripens in a few minutes' time and all culls, partly decayed fruit, etc., can be made up into cider, cutting away the decayed parts, during winter, by the use of the cider press. Many have provided themselves with the patent presses or mills, but many of our farmers are destitute of this convenience. A home-made masher and press like the illustration shows will pay for themselves every year. From ten to twelve gallons of cider may be made of an evening or on a rainy day.

THE FARMER'S BUSINESS CORRESPONDENCE

A COMMISSION MERCHANT sat in his New York office with two letters spread out before him. Each of the letters offered him about the same number of barrels of fruit every week during

the approaching season, and it happened that the number mentioned was just about what he would need to complete his orders and supply his custom. He read each letter carefully and then turned to his stenographer and dictated a reply to each. One received a negative reply and the other an order for the shipment as mentioned in the letter, to be made every week at a very good price, provided the fruit proved marketable and, of course, subject to other market conditions.

The merchant's decision was made and based entirely on the appearance of the letters. The letters were as follows, and you may make your selection—there is no doubt but what it will be the same as the merchant's:

LETTER NO. 1.

—, Mich., Mar. 15, 1912
dear sir: I will have fruit for sale every week beginning about June 15, can you use them? if so would like very much to sell them to you every week.

yours truly JAMES SMITH JR

LETTER NO. 2.

—, Mo., Mar. 15th, 1912.
Mr. John Harker,
Commission Merchant,
New York, N. Y.

Dear Sir:
Beginning June 15th, I shall be able to ship you on Tuesday of each week, four crates or barrels of fruit, beginning with strawberries and including apples, pears and peaches in season—all properly labeled and prepared for market. If you can use them, state probable prices.

Awaiting an early reply, I am,

Yours, sincerely,

JOHN F. BROWN.

It might be said of these letters that the first is not the worst specimen that commission merchants and other business men are forced to read from farmers, nor is No. 2 a model of the best. They are just ordinary letters, but the second is much neater, nearer correct and more business-like. Many samples like the first would contain misspelled words and far worse grammar.

But the point that ought to be of

interest to the average farmer is the fact that the second letter sold the goods and the first failed. It is a clear demonstration that good business methods pay. I believe every farmer should own a typewriter, especially now that they can be bought at prices ranging from \$20 up. With the typewriter one is less apt to make mistakes and every farmer can then have a neat-appearing letter whether he is a good penman or not.

The writing of a good letter is not a difficult matter. There is a correct form for a letter, easy to learn and to follow.

It will pay to study carefully the letters which are sent to you from business houses. When you next write a business letter place before you on the desk a copy of a very well prepared letter from some business house and model the date line, the heading and the close after it.

There is still another point that will prove of value to the farmer and that is the printed letterhead and envelope. Give your farm an appropriate name and have it printed on a thousand each of envelopes and noteheads. They should not cost more than \$3.50 per thousand each, printed. If you buy them plain they will cost from \$1 to \$2, so that there is no reason why you should not have them printed. It is safer to use printed envelopes too, as lost or undelivered mail will then be returned to you.

It is safe to conclude that 90 per cent of the business men today will favor the purchase of products from the farmer using printed stationery and a typewritten or at least neatly and correctly written letter, rather than from the farmer using any old scrap of paper and a penciled letter.

Guess They Know It

"We are taking in boarders this summer."
"Do they know you are taking them in?" asked the visiting neighbor.

Do You Realize on Your Opportunity?

In every number of UTDF there are advertised new machines and new materials that you need. Unless you buy them you lose the opportunity for more profit, or comfort, or pleasure. Don't hesitate to buy, as every advertiser is guaranteed.

CARE OF THE SEPARATOR

THE SECRET of making good butter is in keeping the separator clean. A separator that is flushed with cold water and allowed to stand until morning skimming, becomes rank, because the slime that gathers dries fast and is hard to clean. After all the things are washed put them in the receptacle in some order, ready to be assembled, because this saves time. Again, I take care of the separator and am so used to it I could put it together in the dark. Another reason why I clean the separator myself, I would not care to ruin my reputation as a sweet butter maker for the world. So do not give the separator a bad name.

There isn't any separator that will skim clean cream by just flushing with cold water. It must be taken apart and every piece should be rinsed in cold water first, then put in a pan large enough to hold them, then scald everything with boiling water, enough to cover the pieces. Gently rock or whirl the pan round so that the water rushes through all the funnels and tubes. Test with your sense of smell—keep it so—sweet and clean. I assure you the butter will be as sweet and clean. If it isn't, the one who did the milking was careless.

The boy may protest against washing his hands in hot water. Insist upon it. Stand by until he forms the habit of absolute cleanliness. Indeed, the boy must be taught not to squirt a thin stream of milk in his left palm, then his right, and keep on milking, while the milk drops from his hands or elbows into the milk pail. I have seen the milking done in that way, and it did not surprise me when the butter was churned, it had the distinctive cow-flavor, unpleasant.

Absolute cleanliness is essential both in the milking and in the care of the utensils, cellar, and churn. And please don't wash the milk pails in the same water with the supper dishes. Wash them when the separator things are washed. Do not wash with soap. Use baking soda. Soap makes a slippery mess of it. Wash all the milk utensils with a thin cloth of knitted underwear, and keep it for the purpose. Do not wipe after the hot bath, for the things are hot and will dry quickly. Do not use the milk pail and milk utensils for other purposes than the use of butter making, or milking, for there isn't any substance which will absorb odors as does the milk or butter, so be careful.

It means attention, but not heavy work, though, for it is work that will bring its reward. It will pay, not only in the saving of dollars, but in the fact that the butter you make is pure and wholesome, above all not a subject for severe criticism.—Elizabeth Marie Spies.

A NEW TEST FOR SOUR SOILS

WHAT is expected to prove a more positive test for soil acidity than the common litmus paper test, and one which, because of the cheap and harmless chemicals used in its operation, will be within the reach of the ordinary farmer, has been devised by E. Truog, instructor in the department of soils, College of Agriculture of the University of Wisconsin.

The new test, it is believed, will be of especial benefit to county representatives and to field agents of the state soils laboratory, owing to the fact that it is simple to operate and approximately quantitative results can be secured in from ten to fifteen minutes.

The new method consists of the addition to a sample of soil to be examined of zinc sulphide with small amounts of calcium chloride and water and boiling the mixture in a flask held over a small flame, preferably an alcohol lamp. Commercial lead acetate paper, which can be purchased at the drug store, when held in the fumes of the mixture for a few minutes, will

Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

turn from light brown to a shiny black according to the degree of acidity in the soil. The natural color of the lead acetate paper is white, hence the discoloration can be plainly seen and will more accurately gauge the acidity in

a soil than will the litmus paper test now in use.

The chemicals are perfectly safe for the layman to handle and the complete apparatus, including flask and burner, ordinarily will not cost more than \$2.

Method of Calculating Size and Cost of Home-made Silos

METHODS of calculating the proper size and cost of silos are given in a recently issued Farmers' Bulletin No. 589, "Home-Made Silos." The bulletin, which may be had free on application to the United States Department of Agriculture, consists of forty-seven pages, with thirty-seven figures and diagrams, and gives explicit directions for the home construction of concrete, stave and modified Wisconsin silos.

The concrete silo has the advantage of the other two in permanency and stability. A well-constructed concrete silo will last indefinitely. There is no danger of its blowing or burning out or being attacked by vermin. Little attention is required to keep the structure in good condition.

The stave or tub silo has become very popular in late years because of the cheapness, ease and quickness with which it may be constructed. Stave silos, however, are temporary structures, since they last only from five to fifteen years.

The modified Wisconsin silo is more substantial than the stave silo, that is, it is not so liable to be blown down or to get out of repair through drying. In case some parts of the wall rot out they can be more easily repaired than those of a stave silo.

Decent data on the cost of home-made silos collected by the Dairy Division from all parts of the country show the following relative cost of three types:

The following table will show the proper diameter of the silo for herds of different sizes to be fed different amounts for winter feeding, when 2 inches of silage are removed daily:

Relation of size of herd to diameter of silo for winter feeding (on basis of 40 pounds of silage per cubic foot).

A 900-pound cow will ordinarily consume 30 pounds of silage a day; a 1,200-pound cow about 40 pounds. Yearlings will eat about one-half as much as mature animals; fattening cattle, 25 to 35 pounds for each 1,000 pounds live weight. A sheep will take about one-eighth as much as a cow. Horses should be limited to 15 to 20 pounds daily.

In general, the depth of the silo should not be less than twice nor more than three times the diameter. The greater the depth the better the silage, on account of the pressure from above. If less than 24 feet in height the quality of silage will not be the best. A very great height, however, is to be avoided on account of the excessive amount of power required to elevate the cut corn into the silo.

Type of Silo	Number of Silos	Average Capacity Tons	Average Cost	Average Cost per Ton Capacity
Concrete (100 tons or less)...	71	71	\$220.47	\$3.10
Concrete (101 to 200 tons)...	50	135	348.68	2.59
Concrete (more than 200 tons)...	23	219	446.42	2.04
Total concrete.....	144	117	\$301.08	\$2.58
Modified Wisconsin.....	8	116	\$185.52	\$1.61
Stave (100 tons or less).....	25	63	\$118.40	\$1.87
Stave (over 100 tons).....	16	129	187.46	1.45
Total stave.....	41	89	\$145.35	\$1.63

Inside Diameter of Silo (Feet)	Quantity of Silage in Depth of 2 Inches (Pounds)	Number of Animals That May Be Fed Allowing—			
		40 pounds per head	30 pounds per head	20 pounds per head	15 pounds per head
10	524	13	17	26	35
11	634	16	21	31	42
12	754	19	25	37	50
13	885	22	29	44	59
14	1,026	25	34	51	68
15	1,178	29	39	59	78
16	1,340	33	44	67	89
17	1,513	38	50	75	101
18	1,696	42	56	85	113
20	2,094	52	70	104	139

We were surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent of the farms in the country.

Grape vines are inexpensive to start with. They are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and they practically last always. In addition to all of these things, grapes bear fruit every year and the fruit is healthful, valuable and desirable almost second to none that grows.

Considering the sum of these advantages, how can any householder justify himself in putting off planting some grape vines any longer? Only one in seven farms has a grape vine. There are also hundreds of thousands of town and city homes that have neglected to provide this handsome vine and universally prized fruit. Grape vines such as ours would cost 50 CENTS EACH or more from nursery salesmen.

The varieties are Niagara, Moore's Early, Concord, Diamond, Worden and Catawba. This collection comprises extra early, medium and late varieties, and the three colors, black, red and white. Full directions will be sent with each collection.

Our Offer Send 75 cents and get this collection of six grape vines and UP-TO-DATE FARMING one year, or send a club of five at 50 cents—\$2.50—and we will send you thirty vines and the paper one year to each subscriber. Send the coupon.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

HOW I CLEARED MY PLACE OF DEBT

(Awarded First Prize of \$3)

WHEN I purchased my farm of fifty acres, I was not in a position to pay cash, but went in debt heavily. When I moved to the farm it was in poor condition to raise any kind of crop. Over half of it was in woods, not timber, but just worthless brush. The part that was under cultivation was so poor that nothing would grow sufficiently to make a crop. I took possession in May. About all the crops were out and I was unable to fertilize the first year. My nearest neighbor told me that I would starve out, for every man who had tried that farm before had given it up. This was not encouraging, neither was my fall harvest. My corn was so short the neighbors asked if I was going to dig it; my hay crop was two small loads. Therefore, I was compelled to buy feed for my stock, which was two cows and two horses. With feed bills and doctor bills (for the first year a typhoid epidemic broke out in our community), I was bankrupt and had to sell a horse to raise \$84 interest the next spring. However, with the warm spring sunshine came new hopes and new ambition, and I started in dead earnest. I purchased another cow and started a milk wagon to a town two miles away; I also raised a good patch of truck which I sold and delivered along with my milk. When I put out my crops I used lime and fertilizer along with my barnyard manure, the result was a very encouraging harvest. During the summer I worked at the carpenter trade and in the fall I cleared more land. As I cleared a field I would sow it down in grass which enabled me to keep more cows, for I was finding out that in the milk lay cash. Each year I added more to my herd, but always keeping up to a set standard, and as I increased my herd I increased the fertility of my soil and did not have to buy feed to winter on, but had hay to sell.

By keeping the best and repeating each year only on a larger and better scale, I was able to pay off all indebtedness in a few years and now, twelve years since, I have my farm paid for, an addition built to my house and barn, a silo, several necessary other buildings, my house plumed with gas which I piped a quarter of a mile, my farm all cleared but three-quarters of an acre wood lot, and all cleared land raising prize crops of the community. Besides I have a neat bank account and am lending money to the neighbor who said I would starve out, but who now inquires when I am going to purchase a car.—D. S. D., Maryland.

OVERFEEDING THE PIGS

(Awarded Second Prize of \$2)

IHAVE had considerable experience with young and growing pigs and have found that to feed hogs at a profit one has many things to guard against while they are yet young.

It is natural for every farmer to want to see his little pigs grow. Often one gets overzealous and really spoils the animals for later growth by feeding more than they can handle. It is true that the cheapest gain a

pig ever makes is while he is young, but it is as true that he can economically and profitably make only a certain amount of gain at that tender age, and that gain should be in the form of bone and new tissue, rather than fat.

The digestive system of a small pig is small and weak. This is why it is given bulky feeds like milk, namely to enlarge its system. To give it large quantities is not alone a loss of feed, but results in a loss of energy, of digestion, and weakening of the digestive system. All the food has to be digested whether it is assimilated or not, and the part that is not assimilated passes from the body and the result is scours. My experience and observation proves to me that a pig that is crowded too hard at the beginning will not develop proportionately large later on. It never becomes able to handle and utilize to advantage large quantities of feed. It simply becomes stunted at the beginning as a result of too much kindness. By all means feed the pig enough to keep it thrifty and growing, but do not stuff him until he is a burden even to himself. I have also noted the value of giving the pig plenty of exercise. Even in the proteids or growing foods, which young pigs are given, the proportion of carbohydrates is high, say three or four times as much as the protein. The function of these carbohydrates is to yield heat and energy, but if the body does not require enough energy to use up these nutrients, they go for the production of fatty tissues. Hence, the need of exercising the young pig. He must eat these carbohydrates; if he does not exert enough energy in digesting his foods, in moving about, to utilize them he becomes a little bundle of fat. Fat forms around the heart, liver and other vital organs, he becomes, dumpish, inactive and in some instances dies.

A fat little pig is anything but desirable, and a little pig is bound to become fat if he is not given sufficient exercise. Every day they should be allowed to have free range over a field or lot, and if they want to remain in the beds or around old straw piles, drive them out and compel them to move about. I feed middlings with milk twice daily, mixing in a small amount of oil meal. I do not feed much corn. I keep plenty of slack coal in the feed lots, mixing salt with it. Care at this time means dollars at marketing time.—W. G. Noland, Pendleton, Indiana.

(Awarded Third Prize of \$1)

Bad eggs cause Missouri farmers alone a loss of between three and four million dollars annually. Government experts estimate that 5 per cent of the eggs marketed have developing chickens and that 3 per cent are "rots," due to the embryo decaying. All these losses could be avoided by keeping roosters out of the flocks, thus having only infertile eggs produced. If those Missouri farmers would follow this plan they could save one and three-fourths millions of dollars annually. The same averages will apply to all other states, with particularly large losses in the south.

Infertile eggs produced by flocks in

which there is no male bird are the only kind that can reach the consumer in good condition during the hot summer months. The only object in having a male bird in the flock is to get fertile eggs for hatching purposes. Now that the hatching season is over the Missouri College of Agriculture urges all farmers to sell off all the roosters or shut them away from the hens.

Last year in July and August nearly one-half the eggs leaving the farms were unfit for food. The farmer, as a result, received a low price. Prevent that loss this year by getting rid of the rooster. Now is the time to act to prevent future losses.

Heat is directly or indirectly responsible for a loss to Missouri farmers of two and one-half million dollars worth of eggs annually. Heat causes germ growth, embryo and mold development, increases evaporation and causes eggs to become bad in a very short time. April eggs are high in quality because of the lower temperature which prevails at that time.

According to studies made at the Missouri College of Agriculture, nearly all of the loss in eggs due to heat can be avoided by the ordinary conveniences that the average farm provides. If farmers would take the same care of eggs that they do of butter before and during the time that it is taken to market, there would be practically no loss from heat. Any temperature above 70 degrees is too warm. Even under the best of conditions eggs should be taken to market at least once each week.

Eggs should be collected daily and should be cooled as quickly as possible. A sweet, fresh basement, which is cool, or a cyclone cellar makes a satisfactory place to store eggs. They may also be kept cool by placing them in a bucket lowered into a well. Avoid storing them in musty basements and keep them away from flies.

RAISING SHEEP

IN THE spring of 1913 husband decided to quit raising sheep, as his pasture was going to be scarce, we had three ewes at that time, having sold down to that number on account of scarcity of feed, owing to the drouth of 1912.

I dearly loved the sheep and thought there was money in them, so I talked up a trade with a neighbor who had plenty of pasture and no sheep, with the result that he took the three ewes to keep three years, he to keep all ewe lambs and sell all the bucks and divide the profit equally at the end of the three years all the ewes will be divided equally and we get the original three ewes back. He has had them eighteen months and in that time the wool has amounted to \$10.00 and they have sold \$25.00 worth of lambs, have seven fine ewes on hand and one buck, and two lambs died. I think this a good record, and sheep are going up all the time and are very scarce.—A. H.

Better than Riding

They were riding donkeys as a part of the show and a little boy was almost crying because he was not able to hire a donkey to ride. Presently a fat woman hired one and, turning to the little boy, she said: "Don't you want me to hire a donkey for you to ride?" "No," said he cheerfully, "if you are going to ride I'll just sit here and laugh."

Of Doubtful Preference

"What's the matter, daughter? You look troubled and anxious."
"Oh, father, when I marry I want a duke."
"Oh, well, my dear, we can easily arrange that. I was afraid you wanted a baseball pitcher."

Worse than Either

Johnny—You are the meanest, hatefulest, spitefulest person I ever saw.
Tommy—I never saw anybody as crabbed, as ugly and as bigoted as you.
Father—Children, hush. You don't know I'm here, do you?

Vital Points in Swine Raising

TO ATTAIN success in the growing of swine it is necessary to plan at least a year in advance. The first question to be settled is, how many pigs one can afford to grow. This must be determined by the size of the hog pasture, the amount of feed that will be available, etc. There are few quarter-section farms on which it will pay to grow more than 100 head in a year, no matter what the prospective profits may be, for in swine, as in all other livestock, there is a limit to the size of the profitable herd. While double the number might return a greater gross profit, they would not return nearly as much net, and it is the net, not the gross profit, for which we are working. Hence it is important to determine the number of pigs per year that can be grown well. This next point determines the number of brood sows that will be needed. In my experience of more than thirty years in raising hogs, I do not consider it safe to expect more than six matured pigs from a brood sow, although with careful selection and feeding it is possible to average eight and even ten. The number of sows to breed to make a certain number of pigs will depend somewhat on one's wisdom in the selection. There are times when it is best to keep the old brood sows over. It is a common saying that the pig of the mature sow is a month old the day it is born. It will not pay to keep these matured sows, however, unless they have proved by performance their right to be kept on the farm another year. The first thing in the selection of brood sows is to carefully weed out those that have proved themselves unprofitable. There are various classes to be weeded out. First is the irritable, nervous, rattle-headed sow. She may be a good breeder, is probably a good milk producer, but can she raise her pigs? Has she faults of temper or lack of judgment that condemns her? Relatively speaking, the sow that produces small litters should be rejected. Not necessarily for that one offense, however. There may be circumstances which entitle her to her owner's charitable judgment, but if she is the type of sow which usually produces small litters she should be excluded.

No aged brood sow is kept on any farm that has not proved herself to be a good milker. There are certain indications which enable us to judge of the milking quality of the brood sow. There is a very close connection between the milking capacity and the breeding capacity. Poor milkers are generally shy breeders. Nature nearly always cares for the young. Good milking quality is quite as important in a brood sow as in a dairy cow.

When a sow gets the habit of eating her pigs it is well to get rid of her. Especially is this true of the heavy sow that becomes loggy and careless and lies on her young, or when she becomes so excited in the presence of her owner that she is ready for war, it is well to dispose of her. But the brood sows should ordinarily be kept till they are four years old if they have proved by performance their right to the very best treatment one can give them.

Usually there will be so many brood sows weeded out by this careful selection that it will be necessary to draft from the young ones. Here we have an opportunity for the exercise of sound judgment. We must study

not merely the gilts but their dams. There is a good deal in favor of the gilt that comes from a large litter that is well nourished and uniform. I consider it a black mark to a brood sow to have seven or eight pigs, a few of them first-class and the rest uneven, but a gilt has a right to the honor of being a mother of pigs if she comes with a large litter, well nourished, and from a sensible dam. Before making a selection of the brood sow it is well for us to leave our ideas of beauty in the house, for in the pig, as well as in other places, "pretty is as pretty does." I would reject without a moment's hesitation the nice, chubby, compact, good-looking gilt that is inclined to take on fat. The place for her is in the feed yard. Above all things, only those sows should be selected that have a positively feminine appearance. No one, if he were at a sale, would think for a moment of buying a heifer for dairy purposes that had a steery look, no matter how well formed she might be. On the same principle should the sow be rejected that has a masculine look. There is a look of motherliness in some gilts, even by the time they are weaned. For it is mothers that we should look for. This class will not be found with a tendency to take on flesh. They are rather loosely built, roomy, and inclined to growth rather than fattening. When it comes to mating (and this is one of the most important features of swine growing) it is necessary to select a rather closely built, compact, energetic male that is as decidedly masculine as the gilts are feminine in appearance.—John Underwood, Tunnel Hill, Ill.

FATTENING PIGS FOR HOME USE

IF THE early spring pig has been kept in a thrifty condition since weaning time, it will be ready to place in the feed pen early in the fall, then if well fed, it will be ready for the butcher in November. The days of feeding the pig until he is weighted down with fat and a seeming misery to himself, are about past, and justly we think. For home consumption the tender, juicy flesh of the pig is much the best. As a rule the quicker the pig takes on fat or grows, the better the pork product. And unless obliged, under pressure for "more" lard, a la Oliver Twist, we would never grow swine until they were simply a mass of fat, as all the fine flavor is merged into fat. The younger the pig the more easily and economically can it be fattened, as a rule.

The fattening pig should not be fed on corn exclusively. Give a change of diet. Give foods that supply protein, as peas, cow peas, soy beans, mid-dlings amde into good, sweet soup, etc.

Do not make the mistake of thinking anything is good enough for the pig, and as a consequence, let the contents of the swill barrels become sour or ill-smelling, as to be a nuisance. It is a positive affront to offer an animal such food, alive and teeming with bacteria. Contrary to the belief of some people swine prefer thin food, fresh and clean. Give growing pigs all they can eat and no more, at a feed.

Sweet corn is an excellent fattening food and if somewhat soft, so much the better. Skim milk is best fed direct from the separator or the dairy.

Troughs should be cleaned before placing a fresh supply in them, and the pen kept free from decaying matter, as possible, as swarms of flies are attracted and prove a source of annoyance. Fleas are active in the warm months and should be destroyed with kerosene emulsion. Apply by spraying or use a small hand broom. Annoyance from insects or vermin causes irritation and retards growth. Clover makes an ideal fattening place for pigs. A pig fattened to the weight of 150 or 200 pounds is in prime state.—A. C. McPherson.

WINTER FEED FOR CATTLE

FOR the dairyman who is working on a large scale nothing can take the place of the silo as a means of supplying green feed in winter. However, the small dairyman, or even the man who keeps only a few beef cattle, in most cases cannot afford a silo and must look for some other means of supplying green feed in the ration.

I believe the next best way to get a good supply of green feed for cattle is by planting mangels, beets and turnips. If you have never tried this method of growing feed you will be agreeably surprised at the amount of succulent feed that can be produced on any small plot of ground well cultivated.

I usually select a piece of low-lying, rather sandy ground and turn it to a depth of ten inches. It is then disced and harrowed until in good, mellow condition. Much of the work that goes on these winter crops should be done before they are planted, and you should not plant them until the ground is ready for them.

The rows are laid off two feet apart with a large shovel plow or a small middle breaker. In the bottom of this furrow is put an application of some fertilizer calculated to make watery growth which will differ in most sections. I use about five hundred pounds per acre. The rows are bedded up and then dragged down. I always do the seeding by hand in a small hand-made furrow, using the hoe for this work. Sugar beet seed are hard to germinate and I usually soak them a few hours before seeding.

A small one-horse plow run through the middle of the rows about three times and the weeds cut and the battle is won. If you have been careful in seeding they will need no thinning.

I harvest them in the fall when I am ready or when they have made their growth. They are halved and piled convenient to the barn in small high stacks. A layer of straw is thrown over them and then soil is placed over all to a depth of six or eight inches. I make an improvised shed over this of loose boards laid in courses and weighted. Thus treated, beets and turnips should remain sweet and crisp all winter. The addition of a small amount daily to the ration of a dairy cow will generally result in greatly increased milk production. I think it is not so much the amount of food value added that helps the production as it is the fact that such feed helps to make more assimilable the other feed in the ration. This feed is also good for any other cattle and stock you may have. I usually feed my turnips to hogs, reserving the beets and mangels for cows.

Of varieties of these crops, for mangels the yellow globe is seemingly the best producer. Rutabagas require a longer season than the others. You will probably do well if you plant them to select one as near globe form as possible. Rutabagas or mangels ordinarily make from fifteen to twenty tons of feed, but though the beet does not make so much it is regarded as by far the best for feeding.

It is not feasible to attempt to raise successful crops of root vegetables on sour land or that not well drained. They require a moist, but not damp or wet, seedbed, deeply prepared and well mellowed.—Kolb Perkins, Cushing, Texas.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

For many years farmers believed that the place where they were the most wronged, or the place where they could hope to get surest and quickest relief from bad business conditions was where they did their buying.

Around this idea the early farm organizations were built. But about twelve years ago this paper announced that farmers' chief end of organization should be to price their own products. That the place where they were wronged the most was where they sold their products, and if they ever made any considerable money, outside of the rise in the price of land, it must be in what they sold.

That was the beginning of the great change in the chief object of farm organization, from buying supplies cheaper to selling the crops high enough. Farmers' organizations now in the field, and which originally recognized only the buying object are adopting the selling object, and thousands of independent local organizations have sprung up all over the country to help their members in selling. Notwithstanding, though, that practically every farmers' organization now recognizes that wise marketing is the corner stone on which it must be built, they are now forced to admit that there is still something lacking. As organized now, the very best association that exists often meets disappointments in marketing, and if a crop is very abundant often all goes at unprofitable prices.

This shows, if indeed a demonstration is necessary, that the uniting of the farmers of a community for business is not enough. But we believe the last word in agricultural organization and co-operation has been said in the newly organized American Farmers' Federation. This new organization may be compared to the college and university, where the farmers' education is completed and he is fitted for the great undertakings, while the original attempts at organization, fifty years ago, were the kindergarten schools, and the common and high schools of co-operative education.

The local club or organization is still needed to develop the people in co-operation and to do everything for the welfare of that community. But the dreams and prophecies of thinkers,

along co-operative lines for farmers, are now to be realized through the new federation. While the local farmers' organization is needed for social, educational and business reasons, the greatest fulfillment of its destiny as a useful institution must come through its affiliation with and the consolidation of all of them in one great national and international federation. Through the federation will come the solution of the great problem of distribution. This problem solved, as it must be solved, to protect the producer in his prices and profits, many other problems that have vexed farmers will automatically solve themselves.

It is, of course, purely speculative the number of farmers in the present organizations which are eligible to membership in the federation. The number, though, is enormous and, unquestionably, enough to exert the balance of power to feed the market as the real demand expresses itself and put price-making in the hands of the producers, if only such would control their crops and delegate the marketing to the federation. Some person has estimated that there are "no less than 5,000,000 of our rural population interested in co-operation." This probably included farmers and their families.

It is stated that there are 2,200 farmers' co-operative grain elevator associations, 2,120 farmers' dairy associations, and 349 cheese factories. Besides these there are fruit, vegetable, potato and other associations, and many farmers' clubs and organizations for any and all purposes that may be needed. The 1910 census report gives the number of farms in the United States as 6,360,000. If we assume that one-fourth of these are in the co-operative associations, then 1,590,000 farms, or the products of them, are directly in line for national co-operation in marketing and the entrance fee is only \$5.00 per local unit of organization. It is conservative to assume that fifty is the average membership of the present associations. Then the cost per man is only ten cents.

The very special attention of each reader is called to the article in this number under the head "American Farmers Federation," and the blank appended thereto. The plan of the federation as explained in that article,

has an exceedingly strong appeal to present local organizations of all descriptions. But farmers outside of organizations are also told how to proceed to qualify for admittance to the federation. The latter should send the blank appended to this, and the former the blank appended to the other article.

In order to prevent any confusion, let me say here that the entrance of the American Farmers Federation in the field does not disturb the status of the Farmers Society of Equity, or any other society or organization, and they should not be affected in the least, except to enlarge their field of operation and multiply the benefits their members can secure. We hope the officers and organizers of such organizations will be quick to see their greater opportunities and embrace them. The fact that the A. F. F. is in the field is not a reason for the efforts to organize locals of the F. S. E., or any other organization should be slackened, but rather that they should be increased.

The national headquarters of the F. S. E. recognizes that there are still all the old arguments why every community should have its local clearing house, with the additional one that now such clearing houses will soon get even greater benefits because of the federation.

We will say that the American Farmers Federation is the sum or sequence of all the former efforts of farmers to organize and co-operate. We believe the plan that has been adopted is adequate for the establishment and operation of the national and international marketing system for farm crops. One thing it has done that should have a tremendous bearing on its future, viz: It has avoided antagonizing present organizations. On the contrary its plan of building only with established local units can be made a decided boost to the present organizations. And any organization that antagonizes the federation or stands aloof and does not help to build it up, we may question that organization's sincerity in its work for farmers.

At least such were the thoughts of those who organized the federation. If they fell short in anything, they have provided that any shortcoming can be remedied in the first annual meeting to be held next December. So we appeal to all farmers and their teachers and leaders to help establish the federation from this moment and meet with us next December to remedy any error of omission or commission of the Kansas City meeting.

With this fair declaration we want to say that any local organization that refuses to federate wilfully restricts

its present usefulness and to an extent retards the day of the fulfillment of the federation's purpose. And a community of unorganized farmers who will not now organize and then federate, simply puts off the day of their deliverance from the present vicious marketing system.

The probably ten thousand local associations now, no difference what their affiliations or connections are, should consider the fate of many other local associations that went before them and attempted to solve their marketing problems with community co-operation. By federating they can take the last step and it is the one that will insure their permanency. And to those farmers who have refused to join any organization because "farmers won't stick together," we can assure them that the federation has come to stay. It is giving to American agriculture a business system that will be necessary as long as crops are grown to sell.

And don't think that the new organization belongs to the officers. It belongs to the members. It has no capital stock and nobody will ever draw dividends except the members, through better prices obtained for crops sold. The door of the federation is open so wide as to admit every producer of any crops to sell. The way is made plain in the article referred to headed, "The American Farmers Federation."

If you are a member or an officer of a local association now, see that the necessary steps are taken to federate and send the blank appended to the other article. If you are a farmer outside of an association send the blank below. If you are not a farmer and want to engage in a pleasant and profitable business, send the blank below.

This Is the Blank.

Farmers Society of Equity,
Indianapolis, Ind.

Gentlemen: Please send me full particulars for organizing local associations and federating them. If agreeable to you, I will undertake to organize at the following places, which are market cities or towns, or shipping stations:

American Farmers Federation

Following is a brief but clear statement of the purposes of the American Farmers Federation, recently launched at the meeting in Kansas City, Kansas, and its plan or organization and co-operation to accomplish its object. This article should be read carefully by each subscriber and then passed on to his neighbors for them to read. And more than this. As the marketing problem of farm crops, and which affects every producer of crops to sell, can only be solved in a reasonable time through such a federation movement, the farmers in each community should now see to it that the association they belong to federates, or, if no association now, then one should be organized at once. The form may be that of the Farmers Society of Equity, or any of the other organizations in the field, or it may be independent. But the article explains. Farmers, to whose attention this comes and who approve of the federation, should write to the head officers of any association they may belong to and to the publishers of farm papers to help establish the federation. By doing so they will be promoting the welfare of their organization, or the paper, as the case may be.

What the A. F. F. Is

It is an organization of farmers' organizations in which the unit of membership is a local farmers' association, and not the individual.

Its Object

To accomplish the great marketing reform for the products of the farms to the end that prices will be profitable to the producers, equitable to the consumers, steady over the whole year, and the enormous waste and greed for profits in their distribution be at an end.

How It Will Be Done

We will federate present local associations and where none now are, see to it that one is organized, and then federate it.

The field of the American Farmers Federation is North America. It is for all crops and for all farmers who produce any crops to sell. Therefore, the plan is to have a local organization at each city, town or railroad station where any crops are marketed or loaded to ship away.

The American Farmers Federation is giving to agriculture a business system at last. Being a business organization, it must be organized where the business is done. This means that the local must be at the marketing place and not at a schoolhouse. Organizations at schoolhouses may be maintained for other purposes, but they must affiliate with the central local association at the marketing or shipping place. However, members in good standing may market at any local.

As this article is intended to reach all farmers, whether members of an organization now or not, we want to make it perfectly clear just what the federation is and what it is doing and how it is doing it.

Not a Rival of Present Organizations

We have said it is an organization of farmers' organizations, not individuals. The unit of membership is a local organization. It is, therefore, not a rival to any existing organization such as the Societies of Equity, the Grange, the Gleaners or the Farmers' Union. Nor does it matter to what organization the local belongs to make it eligible to a membership in the federation. And, when it federates, the American Farmers Federation does not dictate or interfere in the least with its relations to the parent organization of which it is a part. It only takes on itself the additional federate relationship and becomes a part of the great working force that is establishing the new marketing system to take the place of the one that has too long obstructed the sale of farm products, interfered with the supplying of demand, made consumption less than it should have been, discouraged production because of unprofitable prices and exacted unwarranted tolls from both producers and consumers.

Where there is a local association now that will federate, the organizers of the American Farmers Federation are required to assist in building up the membership of that local. In case it will not federate and in places where there are no local associations now, the organizers of the federation are expected to assist in organizing new locals in any present organization, or they may be independent, as there are thousands of independent locals in the country now, and under any name the local people select. After it is organized it is eligible to entry into the American Farmers Federation on exactly the same terms as local associations already organized. The federation's only requirement is that the local thus organized shall become a part of the federation and, therefore, a factor in solving the nation's marketing problem.

Thus the federation will not only not interfere with the organizations and societies that now exist, north, east, south and west, but it actually helps them to build up and increase their own membership and their strength for the accomplishment of their own objects, under their own laws and rules, and besides, through the federation, the great object of scientific, systematized marketing will be accomplished without special effort or complications on the part of the societies, unions and organizations themselves.

The American Farmers Federation thus supplies a shorter road to success in marketing to solve the great problem of profitable prices for farm crops, and that other great problem, the high cost of living, than has ever before been pointed out. It means the building up of all present farm organizations and the organization in one form or another of the whole of rural America, to the end that there may be perfect concert of all in the great reform of the ages—the new marketing system to correct evils that have cursed the world of producers and consumers these many years.

This program is so fair and so equitable and means so much for humanity, present and future, that every present farmers' organization, and all farmers outside of any organization, should subscribe to it immediately and help to its accomplishment.

THE ORGANIZED FORMS AND PLANS OF THE AMERICAN FARMERS FEDERATION

As stated, the object of the American Farmers Federation is to equip agriculture with a business or marketing system. Whether the system will give the results desired depends on the machine that operates it. The machinery of the federation consists of three parts, and only three. They are the local associations, county or district clearing houses, and the National Clearing House.

We have explained how the local of the federation is obtained.

The county or district clearing house is organized by the local associations in the county or district. They may be Granges, Unions, Equity clearing houses or independent. The plan of organizing is fully set forth in the constitution and by-laws. The county or district clearing house is to get the reporting into large units, instead of the local units, which would be so many as to make the plan unwieldy.

The National Clearing House is the central business head. Its composition and government is fully set forth in the constitution and by-laws. Its present location is at Indianapolis, Indiana.

The work of the American Farmers Federation is limited to marketing the crops of its members. (Component local clearing houses). Following is the process:

Getting a Report of Supply

The members of the local association report to their secretary or business agent when any crops are ready to market, or a short time before. The business agent of each local then reports the total of each crop his members have to the county or district clearing house.

The county or district clearing house then has each day a report of all the crops ready for market, or to be ready soon, with the grades or class, in the whole county or district. It then reports the totals to the National Clearing House.

Thus, when the federation is completed, The National Clearing House will have a daily report of all crops ready to market, or to be ready soon, and it will know just where they are and on what railroads they can be shipped. To get this report will require less than 2,000 telegrams a day and the expense will probably not exceed \$1,000 a day. If the reporting would be done in local units the number that would be sent to the National Clearing House daily would probably reach 50,000.

Getting a Report of Demand

Having thus explained how the report of supply is secured, the next thing is getting a report of the demand.

When the federation is completed it will have representatives on all important markets who will gather the reports and transmit them to the National Clearing House in market units, similar to the reporting of supply in county units. (About one hundred of the largest markets have representatives now). When the federation is developed to such a point that a large part of any crop is controlled in the federation, for marketing, then the demand must seek the supply. This will give the producers, or their federation, the opportunity to make the price and the terms of sale. There can be no question about this, for, as soon as the supply is no longer thrown on the market blindly, but is controlled at one place and let out only as it is called for, then the demand will go to it and put down for what is wanted. Pending the time when the federation is developed to this point for the various crops, the marketing will be done through the representatives, thus avoiding many of the old toll gates and putting more of the money that the consumers pay into the producers' pockets.

Immediate Benefits

Any producer who now becomes a member of a local clearing house federated with the A. F. F., and thus entitled to the benefits of the federation, can immediately market to get more money, with constantly increasing benefits as the federation grows.

Duties of Representatives

The specific duties of the representatives on the various markets at this time, is to report the condition of their respective markets to the National Clearing House and to the local and county or district clearing houses as a guide for the direction of the crops. Also to make sales f. o. b. shipping point, or receive consignments and sell them at the highest prices. Also to

co-operate in storing and in financing stored crops.

Direction of Marketing

When reports of demand are received at the National Clearing House from the market representatives, it transmits them to the various subordinate clearing houses that have the supplies, and which are closest to the demand, with all shipping instructions.

Such, briefly, is the system of marketing of the American Farmers Federation. It is giving greater benefits now in marketing than any other plan ever tried. But when any crop, be it grain, live stock, vegetables or any variety of fruit, is controlled to the point that the supply does not at times overwhelm the demand and destroy the values, the producers of such crop or crops can be absolutely able to decide the prices and dictate the terms of sale. As nearly every farmer produces more than one crop for sale, and as the federation is for all crops, then it follows that the development of the A. F. F. in any section, or for any crop, is directly in line to bring other crops more under control for storing and marketing until soon the federation will extend all over the country and all crops will come under its beneficent influence.

TERMS FOR FEDERATING

The by-laws of the American Farmers Federation provide that any present local union or grange or association can become a federated unit on the payment of \$5.00 to the A. F. F. National Clearing House or any authorized agent of the federation, accompanied by a copy of its constitution and by-laws and a list of its members in good standing. The charge is the same regardless of the number of members.

Subsequent members can be admitted to the federated local body on its regular terms but such subsequent members must pay the entrance fee provided by the federation, viz: two (2) cents per acre for the land cultivated in all crops, including gardens, orchards and pastures; provided further, that no entrance fee shall be less than \$1.00. The entrance fee may be paid by the owner of the land or the renter, but it is paid on the farm. Consequently any future owner or tenant on the farm will have the full benefits of the federation without further payment. If the person seeking to enter his farm is financially unable to pay the fee in cash, he may execute his note to the treasurer of the local, with 6 per cent interest, and to run not more than one year. There are no future dues to be paid.

In case there is no local association to federate, or in event there is one and it will not federate, then the farmers of the community shall select some one of the several farmers' organizations now in the field and organize a local body of it, or they may organize an independent local. In case a local of one of the present organizations is organized its usual terms will prevail. When the local is organized it can federate on the same terms as provided above and subsequent members may be admitted as provided above. But if an independent local is organized, then all of the members will pay the entrance fee of two (2) cents per acre and when organized \$5.00, will secure a certificate of membership in the federation.

THE PROBLEM THE FARMERS HAVE TO SOLVE

Briefly stated, this is the problem the American Farmers Federation is solving:

Farm crops are produced in certain parts of the country, but are wanted for consumption in other parts and in foreign countries.

So the problem is to bring the supply and demand together by the most direct and cheapest way.

To do this there must be a place where the crops are reported and where the demand is reported—they must be brought together. We mean this: *Instead of the supply being for sale in every producing community it must be reported to a central clearing house and that be authorized to sell it.* As soon as this is accomplished, not necessarily completely, but to a considerable extent, the order of marketing will be exactly reversed. For instance, *when there are no more crops being dumped in the producing communities, then the demand will look to the clearing house for a demand, the demand will go to them.* Nothing can be more certain. The fact that farmers produce the only absolutely necessary things of life makes their marketing problem much

simpler than any other, but it has generally been considered the most difficult.

IN CONCLUSION

We have said this marketing system is in operation now. Several hundred local farmers' associations are using it and it has representatives on nearly one hundred of the great markets. So let it be understood that as soon as any local association applies for its certificate of federation, it will be supplied with the confidential directory of market representatives and the necessary blanks, instructions, etc. to avail itself of the system at once. In short, *it will be equipped with the federation business marketing system and have the full co-operation of the National Clearing House.* And the same way with any community of farmers that will now organize and federate.

Rests With Present Associations

The matter of completing the American Farmers Federation and quickly solving the marketing problem rests largely with the present associations. There are probably ten thousand of them in the country now and the members of them control probably enough of all the crops to completely revolutionize marketing as soon as they federate. The fee is only \$5.00 for each association. We do not want, however, to minimize the importance of organizing new locals. To build a marketing machine that will do perfect work we will need a clearing house at each marketing place. Besides, the farmers of such communities desire the benefits, and are as much entitled to them, as those already in organizations.

Farmers have perhaps, ten thousand local associations organized now. They organized them to make their business more profitable. But they often are disappointed over the prices their crops sell for, because of competition amongst the associations. They can see now that, standing alone, they can have no hope of better things, but marketing conditions are getting worse. In a federation, however, for national unity in marketing, is their hope. The members will welcome the federation which leaves them home rule, as now, and supplies what all have lacked—a national marketing system. This is the thing that no present local, county, district or even national organization that exists now can hope to have alone.

Raises a New Hope

The time has come when farmers all over the country are ready for organization and federation on a sound plan. Wherever the federation plan is presented it raises new hopes for a solution of the vexed marketing problem, on which all others of farmers' problems hinge. The plan of organizing and federating presented here we believe is the best so far proposed and it should be carried out in every community. *We submit, if the great marketing problem is ever to be solved, must it not be solved this way? So why procrastinate? The thing must be done and will be done some time. So why not do it now and begin to get the benefits at once?*

Farmers Will Accept It

The fact that farmers are organized in perhaps 10,000 local bodies now should dismiss all suspicious that they might not accept the federation idea and use the federation's system. If they were concerned about their well being to organize in 10,000 local bodies, then will they not welcome the federation which gives them the first real foundation on which to build an enduring organization and a business system, when sufficiently established, under which no crop will ever need to be sold at unsatisfactory prices, and which local co-operation never can guarantee?

What We Are Working To

For fear that some may think the undertaking is too immense, let us say that what the National Clearing House proposes to do will not call for much more detail than some local and district marketing associations have now. Remember, what we seek for is to control the supply in the federation and at the same time take care of the financially poor farmer while he is holding his crops. Then the plan of marketing will be exactly reversed. That is, *instead of the supply chasing around blindly for the demand, the demand will be compelled to go to the supply.* Under such a condition the National Clearing House can direct the marketing of a thousand car loads of grain, a million barrels or boxes of apples or a million bales of cotton as easily as a local association can market a few car loads, with

FEDERATION BLANK

American Farmers' Federation, Indianapolis, Ind.

(The name of the association) desires to become a unit of the American Farmers Federation. We enclose \$5.00 with this. Also we accompany it with a list of our members who are in good standing and a copy of our constitution and by-laws, as per conditions for federating.

Please send us a certificate of federation and the necessary blanks, directory, etc., and instructions for using the federation's system of marketing. Following are the crops we have now, or will have soon to be marketed:

.....
.....
.....

..... President

....., Secretary

If no local association at your place now, fill out and send blank j "A Personal Message" department in this paper, and get full instructions for organizing.

definiteness in the former case and all uncertainty in the latter.

Some of the Benefits

So we've got to federate the local organizations and organize others. The federation is going to be a great and good organization as soon as the farmers want it of be. You must not expect the men at its head to work it out alone. They can not do it. Only as the farmers themselves want the federation for the freedom, independence and extra profits it will make them, will it spread and cover the land. Through the American Farmers Federation the farmers can get everything they want or should have. When the marketing problem, to always get profitable prices, is solved, land values will be maintained or increased, the fertility of the soil can be built up, farmers will build better homes and beautify their grounds. They will build good roads and will educate their children. The farmer and his wife and children will work less and hire more help, because they can pay the price of labor. The farmer's wife will furnish her home as handsomely as her city cousin does. The hired-man problem will be solved and the boys and girls will want to stay on the farm, because it will then offer possibilities for profits equal to any other business, and other young and old people will then want to go to farms. And besides all these things, the success of the farmers through the federation will make them heavier buyers of goods. This will benefit the merchants and build up the country towns and through the country merchant the benefits will reach the merchants and manufacturers in the cities. In short, the establishment of the American Farmers Federation will bless and benefit every person in the country, except those who exist now because of the uncertainty in agriculture. With the certainty and steadiness of price of farm products that this movement is destined to bring, all speculation and gambling in the necessities of life must end. Then we will also see the end of the rule of the gambling boards of trade and produce and cotton exchanges. If there seems to be to you, some bothersome details not covered in this brief circular, seek for further light and work for the establishment of the federation in your community.

RESOLUTIONS

Adopted at the Mass Convention, Kansas City, Kas., August 17-19, 1914

WHEREAS, The advance crop reports of the government come at times when the farmers cannot take advantage of them by increasing their acreage or reducing it to thus work to a normal production, but they are looked for by the speculators, and every improvement in crop prospects is a signal for a reduction in price of the balance of the former crop that the farmers have on hand; And

WHEREAS, Advance reports are not

correct and cannot be depended upon as measuring the final crop. But an overestimate based on the final yield of the crop, results in an unfairly low price for any marketing that is done before the crop can be accurately measured. For instance, the advance reports of an extraordinary yield of spring wheat this year, based on both the winter and spring wheat crops, probably made the early market in winter wheat from 10c to 20c a bushel lower than it should have been, on the basis of the total final crop. Therefore,

BE IT RESOLVED, That this meeting does condemn the advance crop reports and we recommend that the department of agriculture give out only two reports on each crop. The first one, the acreage planted as soon as it can be reliably estimated, and the other one when the crop is harvested and can be reliably measured.

ON AGRICULTURAL COLLEGES.

WHEREAS, The Agricultural Colleges of the country are co-operating with the Council of Grain Exchanges, which is a federation of the leading boards of trade and produce and cotton exchanges of the country, for the object of increasing the production of crops. And

WHEREAS, The boards of trade and produce exchanges are opposed to any different plan of marketing, consequently the colleges are handicapped, if not wholly prevented, from performing their services to farmers and educating them and helping them to get more money out of their farms. Therefore,

BE IT RESOLVED, That we demand that the Agricultural Colleges of the country divorce themselves from such harmful influences that have for years made them institutions more for the benefit of the enemies of farmers rather than institutions exclusively in the interest of agriculture.

AGAINST PRESENT METHODS OF PRICE-FIXING.

WHEREAS, Violent fluctuations in the price of grain and produce on boards of trade are detrimental to the producers of the crops and the consumers of them. And

WHEREAS, They are a burden on the miller and to business, and are a benefit to no one except the speculators and gamblers. Therefore,

BE IT RESOLVED, That we condemn the present mode of price-fixing by boards of trade, and be it further

RESOLVED, That we favor a commission appointed by the government with power to name prices on all farm products, which we believe will be equitable to both producers and consumers. And

BE IT FURTHER RESOLVED, That we have reached a point when all products bought and sold in interstate commerce should be so bought and sold by governmental protection, in weighing and grading, as provided in the McComber bill now before Congress. And

BE IT FURTHER RESOLVED, That we denounce to the fullest extent the trading in futures and especially urge our representatives in Congress to employ all possible means to end such practices. And

BE IT FURTHER RESOLVED, That it is the sense of this convention that each and every local society, association and organization of farmers be cordially invited and urged to co-operate in the movement to federate all agricultural associations for the purpose of the establishment of a practical, efficient, national system of marketing.

Signed by the committee:

W. T. DICKSON, A. E. WEBER,
B. F. WALTON, C. W. PECKHAM,

The Fame of the Equity System Spreads

We will hold meetings every week so as to keep perfectly acquainted with the workings of the society and let nothing get cold. We have several members who came from localities where the Equity has done good, one in particular from the tobacco districts, a young man who was forced to leave the home farm. Tobacco was selling as low as 2 cents per pound. Now his father, on the same farm, receives as high as 23 cents and even more for fancy wrappers, all due to organization. And there are others from other sections with similar experiences.

Our hard fight will be to establish a standard pack so that all fruits and vegetables shall be absolutely sound when offered for sale, here or elsewhere. This we expect to accomplish through the society.—J. C. Alden, Ft. Landerdale, Fla.

Twine Highly Satisfactory

Buffalo, Mo., July 20, 1914.
MR. J. A. EVERITT—July edition of Up-to-Date Farming at hand. Notice a letter from Mr. Fogarty states his supply of twine is exhausted and he hopes to do business with the F. S. E. again next year. I, as a member, hope he may, as our twine was highly satisfactory both in price and quality.

We believe our small order resulted in a saving of \$1,000 to the farmers of our county. At the beginning of the season the farmers were paying for a similar twine 11 cents at some places and 12 cents at others, and the report was circulated that the price would probably advance. When our success in getting twine for a much lower price was learned, and just as the twine market opened up in full blast, the price suddenly dropped to 10 cents.

I understand our county used more than two car loads of twine. On a basis of 60,000 pounds a saving of 1 cent a pound would be \$600. Enough would have been sold at 12 and 13 cents to make at least a minimum of \$1,000 saving to the farmers.—Yours very truly, M. E. Davis, President, Goodson, Mo.

The Individual Shipper's Handicaps

The United States Supreme Court has decided that a shipper of live stock must file damage claims in writing with the agent at the point of delivery before the intermingling or sale of the stock. Some railroads require that damage claims must be made within forty-eight hours after the stock arrives at destination. The shipper must have complied in full, to the very letter of the stock-shipping contract of the road, or the transportation company is automatically released from all liability. Farmers must either look after these matters themselves, and be right on the job, or organize a shipping association and employ an agent to look after their interests, or sell to the local buyer at the latter's price. The method which will make the farmers the most money is to organize, have their own business agents at both shipping and terminal stations, as the plan of the Farmers Society of Equity provides.

Awl Given

Save money daily with awl by pairing shoes, harness, belts, rugs, gloves, grain bags, etc. Everything enclosed. Full size 6 1/2 in. long. Makes lock stitch. Use any thread. Full instructions included. OUR OFFER—Awl given with a two years' subscription for 75c. Satisfaction guaranteed or money refunded. UP-TO-DATE FARMING, Indianapolis.

WATCH RING & CHAIN GIVEN
We will send you 20 packages of gold-eyed needles. Sell them at 10c a pkg., silver aluminum thimble free with each pkg. Return our \$2.00 and we will give you a beautifully engraved watch, ring or chain. Guaranteed 5 years. Fine time-keeper, looks and wears like Gold. Also Diamond Chain. ALL FREE. Extra present if you order now. NATIONAL GIFT CO. Dept. 3104 Elmira, N. Y.

Photo Pillow Tops Free!

Send us a good, clear photograph of yourself, a dear friend or a relative, and we will reproduce it on a pillow top free of charge. One or as many you want.

These pillow tops are carefully made, full size, 20x22 inches, out of fine satin. Your choice of white, pink, light blue or yellow. The photograph will be enlarged and reproduced on the cloth, not simply printed on the cloth. Photographers and art dealers charge a high price for this class of work, and it is only possible for us to offer it on our plan free because we contract for thousands. We do not furnish the cord. You are not asked to buy anything extra or sell a thing to get one. Sent by prepaid mail.

clear and distinct, and be sure and write name and address plainly on back of the photo. We guarantee delivery of pillow top within 10 days.

OUR FREE OFFER
Send only 50c, the regular price for a 3-year's subscription to THE HOUSEHOLD GUEST, and a photograph, and your photo will be enlarged and reproduced on a pillow top without additional charge. Just think of it! A beautiful photo pillow top free in connection with a 3-year subscription to THE HOUSEHOLD GUEST, the great big monthly home, fashion and story magazine. Send today, as this offer may never be made again, and your opportunity will be lost forever. If you are a paid-in-advance subscriber, your subscription will be advanced. Or you may send us two yearly subscriptions of two friends at 50c each or one 3-year subscription of one friend, and pillow top will be sent you free postage prepaid by us.

PICTURES ENLARGED

WAR IN AMERICA—Genuine A grade, 16x20, bromide enlargements, 69c; 6-inch frames reduced to 98c; films developed (any size), 5c. Renowned Copying House, 1254 N. Sheffield ave., Indianapolis, Ind. Agents wanted.

SEEDS, PLANTS, TREES

SEEDS WANTED—We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

TENANT WANTED

TENANT WANTED—Experienced dairy and potato farmer for large farm near Helenwood, Tenn., on Q. & O. Road, 212 miles south Cincinnati; must have experience and outfit; share rent; all first year crop given; expiration of 8 years' service will give deed to 40 acres; Swede or German preferred. C. W. Oakes, 151 East Forty-seventh st., Indianapolis, Ind.

MISCELLANEOUS

FREE FOR SIX MONTHS—My special offer to introduce my magazine, "Investing for Profit." It is worth \$10 a copy to anyone who has been getting poorer while the rich, richer. It demonstrates the real earning power of money, and shows how any one, no matter how poor, can acquire riches. Investing for Profit is the only progressive financial journal published. It shows how \$100 grows to \$2,200. Write now and I'll send it six months free. H. L. Barber, 452, 20 W. Jackson Boulevard, Chicago.

I HAVE 100 head yearling steers for sale; also know of 8 or 10 loads heavy feeders, Hereford, Angus and Shorthorns, that I will help buy for 50c per head commission. Write me your wants if in need of cattle. Harry I. Ball, Fairfield, Iowa.

STEERS FOR SALE—60 head calves, weigh 515 lbs.; 45 head Angus, weigh about 675 lbs.; 60 Shorthorns, weigh around 900 lbs. All natives and good quality. W. W. Dyer, Ottumwa, Iowa.

GINSENG SEEDS—\$1.50 per thousand; Ancona eggs, \$2.00 per setting, in season. John B. Hooker, Fly-creek, N. Y.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

THE STATE of trade over the country is summarized in Bradstreet's Weekly as follows:

Irregular and unsettled. Fall trade good in west. Slow in south. Marketing of staples a problem likely to be solved. Crops improved. Rains help cotton, corn and tobacco. New record set up in wheat exports. Exchange market improved. Grain prices higher. Money situation restricts new enterprises. Building slackens. Lumber duller. Farmers hold wheat. Enormous acreage planned this fall. Many industrial plants resume. Pacific northwest lumber mills lack orders. August clearings smallest in six years. Week's clearings larger outside New York. Failures comparatively few.

The two weeks period since our last report has been eventful in agricultural circles. War conditions in Europe, threshing and harvest reports from the northwest, this country and Canada, confirming the damage to spring wheat, the confirmation of a report of a world's shortage of wheat and August weather not favorable to crops over a very large extent of country, operated to advance prices in some lines phenomenally. The export situation, as regards grain, is very satisfactory, but cotton is in a bad way on account of much of the usual European demand being blocked by the stoppage of factories or the inability to reach countries having the mills. The cotton crop is much above an average in yield, and the great question is how to market it. There is no regular market price and sales are made from 6 to 10 cents, depending on the pressure to sell or the necessities or fairness of the buyer.

The September government crop report estimates the spring wheat crop at 15,000,000 bushels lower than the month before, the corn crop 36,000,000 bushels lower, and the oats crop 37,000,000 bushels lower. On the other side are tobacco with 77,000,000 pounds added, potatoes, 1,000,000 bushels added, and sweet potatoes, 5,000,000 bushels added.

The total production of each crop, as interpreted by the crop reporting experts, from the conditions of the crop on Sept. 1, compared with the production forecast interpreted from Aug. 1 condition, and the final production figures for the last five years follow: (In millions of bushels, i. e., 000,000's omitted.)

Crops	Sept. 1 Forecast	Aug. 1 Forecast	1913 Crop	5 yr. Av.
Winter wheat	675	675	523	441
Spring wheat	231	236	240	245
All wheat	906	911	763	686
Corn	2,598	2,634	2,447	2,708
Oats	1,116	1,153	1,122	1,131
Barley	900	203	178	182
Rye	908	43	41	95
Buckwheat	17	17	14	17
White potatoes	371	270	332	357
Sweet potatoes	55	50	59	58
Tobacco, pounds	862	791	954	996
Flax	15	17	18	20
Rice	24	24	26	24
Hay, tons	69	69	64	66

Since our last report the visible supply of wheat shows a considerable decrease which reflects holding by farmers and a strong demand. The visible supply of corn increased moderately under the excessively high prices that are offered, while oats increased more on a big advance in price.

The tables show that price of cash winter wheat advanced 12 to 14 cents at Chicago to 18 to 23 cents at Cincinnati. Cash spring wheat, which had been at a premium of 10 to 15 cents over winter wheat, is about the same as the latter now, and 2 to 4 cents lower than two weeks before. The "future" quotations are also interesting. They were ten cents higher for the December and May options on Sept. 4. Fluctuations in speculative wheat prices are continuous and often violent. The cash prices are steadier and gains made have been well held. It would be foolish to attempt to predict the future price, as that largely depends on the duration of the war. And the war, we predict, will continue until one side is completely vanquished. The victors then will dictate terms of peace, which we believe will include disarmament and preclude the possibility of future war. We should all hope for this and the United States should insist on disarmament.

The price of corn is slightly lower than two weeks before, but oats are 3 to 7 cents higher in the various markets. If present prospects on potatoes continue to the harvest time, the crop will be the third largest produced. The years of larger crops were 1909, 376,000,000 bushels and 1912, 420,000,000 bushels. Reports on the bean crop forecast a crop above the average. The estimated hay crop indicates the third largest ever grown. The apple crop is estimated at 230,000,000 bushels, which is about 65,000,000 bushels more than last year, but about 25,000,000 bushels under the crop of 1912. There are already indications of the old, low price and wasting troubles that usually associate with a large crop of apples.

Advice

WHEAT—Hold for \$1.25 and then sell. **CORN**—Sell old crop. **OATS**—Market gradually. **Potatoes**—Let early potatoes go to market as ready. **HAY**—The price has declined, we advise holding. **COTTON**—Hold it, store if necessary.

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on August 29, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease; X means increase).

	August 15, 1914	Change from two weeks before
WHEAT	38,194,000	— 2,194,000
CORN	5,377,000	X 1,760,000
OATS	24,452,000	X 6,209,000
BARLEY	2,003,000	X 491,000

The visible supply of wheat in Canada on the same date was 8,367,000 bushels. This is 3,842,000 bushels less than two weeks before and is 5,337,000 bushels more than a year before. The visible supply of oats was 1,123,000 bushels on the same date, which is 857,000 bushels less than two weeks before and is 4,839,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on September 8, two weeks before and the year before, as follows:

	Sept. 8, 1914	Two weeks before	A year before
Chicago	1.15½@1.20	1.03@1.06	93 @93
St. Louis	1.14½@1.16½	1.04@1.07	93 @95
Kansas City	1.08 @1.10	99@1.00½	91 @92
Cincinnati	1.18 @1.19	99 @96	95½@96½
New York			96 @97½
Minneapolis—Spring wheat: No. 1 hard, 1.17½; No. 2 northern, 1.09½@1.14½. Two weeks before, 1.19½ and 1.12½@1.18½, respectively. A year before, 90½ and 88½ to 89½, respectively.			
CORN, No. 2 WHITE			
Chicago	80½@81½	82½@83½	77½@78½
St. Louis	82½@85	83 @83½	78 @78
Kansas City	79½	79	77 @77½
Cincinnati	84½@85	83½@86	79½@80
New York			83½
OATS, No. 1 WHITE			
Chicago	50 @51	47 @47½	44½@45
St. Louis	54	47½	44
Kansas City	52	44½@45	43 @43½
Cincinnati	53½@54	43 @43½	45 @45½
New York			

Future Grain Prices

Chicago futures closed on Sept. 8, 1914, and two weeks before as follows: Wheat—September, \$1.14; December, \$1.16½; May, \$1.24½. Two weeks before, \$1.03, \$1.07 and \$1.13½, respectively.

Corn—September, 78½c; December, 74½c; May, 77½c. Two weeks before, 80c, 70½c and 73½c, respectively.

Oats—September, 49½c; December, 52½c; May, 55½c. Two weeks before, 46½c, 48½c and 50½c, respectively.

Winnipeg, Canada—Spring wheat—October, \$1.13½; December, \$1.14½. Two weeks before, October, \$1.11½ and December, \$1.14½.

Chicago Produce Market

Chicago, September 5, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	75	75	100
Tuesday	50	30	100
Wednesday	45	45	80
Thursday	25	30	90
Friday	23	45	35
Saturday	30	25	20

Total, 6 days . . . 248 250 325
Market was firm and more than usually active for a Saturday. This was largely due to the fact that business will be suspended Monday, and buyers will have no chance to fill orders before Tuesday. Receipts were moderate.

Sales reported were: Per bushel, bulk: Jersey Giants—4 cars at 75c; Minnesota Onions—6 cars at 70c, 1 car at 72c, 1 car at 73c. Wisconsin, part white and part red, 1 car at 75c.

Per bu. Minnesota, Early Onions, bulk or sacked . . . 68@73c
Dakota Onions . . . 70@73c
Wisconsin . . . 70@75c
Jersey Green Mountains . . . 82@85c
Jersey Giants, bulk . . . 75@78c
Jersey Cobblers . . . 85@88c

The price of potatoes if 5 to 8 cents a bushel higher than two weeks before. A year before the price of Minnesota Onions was 60 to 65 cents a bushel.

SWEET POTATOES—Were equally steady. Today trade was quiet; offerings only moderate.

Quotable: Barrels, Virginia . . . \$3.00@3.50
Jerseys . . . 4.50
Hampers, Jersey . . . 1.50

BEANS—The market rules quiet. There are a few common white beans on the open market and they are dull, but fine goods are not seen. Dealers, however have stocks; no large quantity. Holders are firm. Hank-picked, choice . . . \$3.00
Common . . . 2.25@2.75
Red Kidneys, common to good . . . 3.75@4.25
Brown Swedish, long . . . 2.50@3.00
Round . . . 2.50@3.00

HAY—Receipts, 1,046 tons. Prairie hay in good demand and firmer. Offerings small. Timothy hay steady. Receipts increasing and demand fair.

Choice Timothy hay . . . \$16.00@16.50
No. 1 Timothy . . . 14.50@15.00
No. 2 Timothy . . . 13.00@14.00
Kansas, Iowa and Nebraska Prairie . . . 13.00@14.50
Illinois and Wisconsin Prairie . . . 8.00@10.00

STRAW—Rye straw quotable at \$6.50@7.00. Oat straw at \$6.50@7.50. Wheat straw, \$6.00@7.00.

There has been no change in the price of straw from two weeks before.

BROOM CORN—is having a fair trade. Corn of good quality is steady.

Per ton. Illinois corn . . . \$120.00@140.00
Oklahoma . . . 90.00@120.00
Damaged, less.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
	12,154	12,642	11,713	6,343	6,988	7,077
	12,054	11,992	10,638	7,163	7,731	8,162

Total . . . 56,017 57,915 46,519
Receipts April 1, 1914, to Sept. 5, 1914, 2,378,271 cases
Receipts April 1, 1913, to Sept. 6, 1913, 2,502,005 cases
Receipts April 1, 1912, to Sept. 7, 1912, 2,458,803 cases
Receipts April 1, 1911, to Sept. 9, 1911, 2,098,504 cases

The feeling is a firm one and the advance of yesterday was well maintained.

Country shippers should be careful in making shipments. It is useless to send eggs which are badly

heated and rotten eggs—they cost freight to get them here and then cost again to get them carted to the dump. The city ordinance, too, makes them liable for confiscation and receivers are liable to prosecution.

Fresh firsts . . . 22½@23 c
Ordinary firsts . . . 21½@22 c
Storage packed firsts . . . 24½@25 c
Storage packed extras . . . 24½@25 c
Miscellaneous cases included . . . 18 @22½ c
Cases returned . . . 17½@22 c
Checks, good sound . . . 15½@16½ c
Ordinary heated and poor . . . 12 @14 c
Dirties, good . . . 17 @18 c
Cuddled stock brings higher prices.
Heated, showing heavy loss . . . 12 @15 c

Change same period last yr.	Change from a year before	Change from 2 years before
X 573,000	—12,332,000	X 12,935,000
—1,330,000	X 1,607,000	X 2,519,000
X 5,674,000	— 4,742,000	X 18,524,000
X 602,000	— 299,000	X 643,000

Refrigerator eggs—April extras, charges paid, quotably 24@24½c. Firsts nominally 22@23½c.

Melons

CITRON—Nothing to speak of doing. Neither demand nor offerings to speak of.

CANTALOUPE AND GEMS—Trade is falling off. It is centered largely in Colorado and New Mexico flat cases. These, especially the former, in good supply and still coming. Few of the Michigans are any longer desirable.

OSAGE—Are quiet. Demand is tame. Such as are large and fine are moderate sale. Small melons drag and rule weak. Any soft or cracked have to be sold now. Even then it is difficult to find buyers.

WATERMELONS—Rule dull and weak. It is too late and too cool for any demand to speak of. A few cars still coming from Indiana and Iowa. The melons are mainly small to medium size.

Fruit

APPLES—Choice fruit is in fair demand. Wealthy and Maiden Blush are about the best sale. Alex-

anders, if fine, also fair sale. Trade in Dutchess is slow. All undersize or common apples rule dull. There is considerable of the cheaper grade stock on sale.

CRAB APPLES—Not much doing on account of it being Saturday. They remain quoted steady if the right kind. They must be nice and of the desirable varieties. Other kinds, or above kinds if not fine, not cared for.

GRAPES—Choice black grapes in regular baskets are ruling firm, having a good trade and offerings only about fair. Cases 6 and 12 baskets are slow sale; none care for these packages. Some Delawares coming in. They are moderate sale when in small closed baskets, but cases are slow. Some Niagras are offered. Very little call for this kind.

LEMONS—There is only a quiet business, so that dullness is quoted. Under good offerings prices were quoted as weak. The European war has not caused the short supply that has been expected.

PEACHES—The market was in a depressed state. Supply was too large. It was altogether beyond the requirements of the trade. Some peaches still to come on the market. All were anxious to close out. No one disposed to hold over, for Monday will be a holiday. Labor day, and there will be no business doing, at least none to speak of. Prices today were lower from the start. They may go below quotations, no one can tell what late market will be. The outlook is bad. For small peaches, especially white, sellers are ready to grab any reasonable bid. Some Elbertas coming, which, though large and fine, are too green.

Beside a plethora of Michigan peaches there also are a good many from the west—Colorado.

Some Michigan peaches coming are perfectly green. They have no sale. Who wants green peaches at any time? The market is overstocked with good fruit.

PLUMS—Are slow. Demand is tame from all sources. They continue in good supply. Conditions not being favorable, an easy feeling prevails. Receivers are doing the best they can.

PEARS—Are not coming forward as freely as some time ago. When fine, large, clean, well put up, they sell fairly well and quoted a shade firmer. Small, gnarled or rough-skinned stock, no matter what kind, are slow and easy at discounted prices.

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago for the period, 1900 to September, 1914, inclusive. The lowest figures in August, 1914, were: Wheat, 82 cents, on August 20th; corn, 75 cents, on August 3rd; oats, 33 cents, on August 3rd.

To Bring Seller and Buyer Together

As an additional help to MEMBERS OF THE FARMERS SOCIETY OF EQUITY in marketing their crops we have instituted this form of communicating what they have to sell to farmers and local clearing houses who may be in need of the things. Any reader of this paper, who is also a member of the Farmers Society of Equity, or will become a member, is entitled to report his crops to the National Clearing House and get this service. FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

COAL for Threshing and for Winter

Our mines will supply all your coal needs. Highest grades. Satisfaction guaranteed. Be sure to write us.

FARMERS COAL CO., Colorado Springs, Colo.

William H. Ramalla, Evert, Mich., R. 3, has 30 tons No. 2 timothy hay and 10 tons meadow clover No. 1 hay for sale. Price \$12 ton, his station.

Tevis W. Saltmarsh, Lebanon, Ind., will have about 200 Brown Leghorn hens to sell about Sept. 15.

SEED PEAS—Horsford and other varieties. Very fine. Car lots and smaller quantities. Write to O. M. Hess, Manager, St. Anthony, Idaho.

Alfalfa hay, No. 1; price \$8.50 per ton, f. o. b. Nelber, Wyo. White to Geo. W. Wortham, secretary, Nelber, Wyo. Also one registered Jersey bull; price \$111.00.

Wanted, fall and winter apples. Geo. W. Warham, Nelber, Wyo.

Frederick I. Garland, Kutch, Colo., reports rye, oats, corn and potatoes for sale.

Elizabeth C. Richie, Shelby, Mich., reports 200 bu. Damsen plums, first class, price 1½c per pound.

APPLES—Emil S. Larsen, Camino, Cal., reports two carloads of Baldwin apples, price 90c per box, packed and graded. 4. 4½x5 tier, f. o. b. Placerville. Also has potatoes, 700 sacks No. 1 Burbanks, \$1.75 per 100 lbs.

PRAIRIE HAY—150 tons No. 1 prairie hay, price \$10 per ton, f. o. b. Davis City, Neb. Address John I. Morris, Davis City, Neb. R. F. D. 2.

HONEY—In car lots and smaller quantities. Address Lewis Yoder, secretary, Nampa, Idaho.

Mr. B. G. Doerksen, Box 45, Denair, Calif., has 3 or 4 tons of dried peaches for sale, f. o. b. Denair. This is home-dried fruit and is fine. Shipped in sacks. Will send samples.

Dried

Apricots Direct from California grower. Apricots, \$10 per 100 lbs.; peaches, \$6 per 100 lbs.; prunes and raisins, \$6 per 100 lbs. Price f. o. b. Kingsburg. Order now for fall shipment. Finest quality fruit. A. L. Cross, Kingsburg, Cal.

J. W. Lathrop, Valdez, Kans., has 1,000 bales of upland prairie hay to sell, f. o. b. Angola, Kans.

Carlisle Commission Co., Kansas City, Mo., writes: "We would be glad if you would put us in touch with members of your association, especially handlers of alfalfa, as we would just as soon buy f. o. b. their track as to handle on commission."

John I. Morris, secretary Garrison, Neb., says: "You may discontinue the notice you published in Up-to-Date Farming in regard to alfalfa, for we had more calls than hay."

R. J. Riner, secretary Advance, Ind., is in the market for good apples and Michigan potatoes to supply his local clearing house.

W. E. Camron, Clayton, N. M., will have a car of first-class Mexican Pinto or Frejolita beans for sale; price 4 cents a pound f. o. b. Clayton. Shipped sight draft, subject to inspection. Will also have milo maize and cane seed and feterita seed.

AMES HARRIS NEVILLE CO.

BAGS BURLAPS TWINES

Standard Goods Prompt Shipments Right Prices

A. A. Bailey, Bagdad, Ky., is in the market for a car load of clover hay. Members should write Mr. Bailey and find out the freight rate to his station and quote delivered price. Remember that freight agents can not absolutely guarantee freight rates, but can quote approximately the freight rates.

Washington Red Cedar Shingles

We are offering straight cars at wholesale prices to members of F. S. E. Have your local clearing house write us for particulars and prices on all grades delivered to your station. We ship nothing but the best. We also furnish anything in Fir, Cedar, Spruce, Hemlock Lumber.

ROBERT EMERSON CO., Box 1156, Tacoma, Wash

Two Hundred Thousand Farmers Acting in Concert are a Power to Reckon With

We also want to extend its circu-

lation and make it the national power in teaching, organizing and directing

Need we remind our present readers that when the new crop wheat was selling at 60 to 70 cents a bushel, we told them to hold it; that we urged them to not sell oats because they would be higher; and potatoes, when others were advising hurrying them to market because the price might be lower, we advised gradual marketing and the price constantly went higher. But this is what we have been doing for years. We know UP-TO-DATE FARMING gives a distinct service to farmers that makes them more money, but we want more of the direct evidence of it. If this paper has helped you in ways that no other paper has, it can help every other of the hundreds of thousands farmers who raise crops like you do. So write us a letter and tell us what benefit UP-TO-DATE FARMING has been to you, particularly financial benefit.

FARMHOUSE WINDOWS IN WINTER

By L. H. Cobb

SOME FARMHOUSES are built with provisions for flowers in the windows and fire is kept up during extremely cold nights to protect them from freezing, but this is an exception, for in most cases little attention is given to flowers in the house and no fuel is used for so simple a purpose as to keep plants alive. It is for this large class of housewives and daughters that have limited facilities for keeping plants, and who do not feel like going to any expense for flowers under the conditions, that this article is written.

Most farm homes are barren and desolate much of the time. This is a mistake, for a little brightness and cheer goes so far in lightening the burdens of life. A few plants in a window and a few moments taken each day to admire and care for them

is such a help in overcoming all tendencies to the "blues." It is not necessary to have expensive flowers, for the simple home garden flowers are as pretty as many of the choice hot-house plants, and they will grow and bloom under conditions where the others would fail utterly.

The old-fashioned snapdragon is a good winter bloomer and it is now very popular as a cut flower. It is so hardy and easily grown that it can be had with no expense in any window. The old blooming plants should be cut back early in the fall and potted up in time to get started before it is necessary to take them into the house, as the new growths are more sturdy if allowed to break in the open air. Give a rich soil and plenty of water and you will have immense spikes of bloom that will be exceptionally pure in color. The colors of almost all flowers are better and clearer when grown indoors, except some of a delicate tint, which come almost white.

Single petunias of bright colors and variations are especially bright in the windows and are so free blooming they will provide a bit of color at all

times. These should be cut back before being taken up. The large, fringed sorts are prettier, but they are not so free blooming as the smaller sorts.

Portulacca, or rose-moss, so well known and popular, is fine for a window box, or it is pretty hanging over the edge of pots that contain some tall growing plant without heavy foliage. The moss is always in bloom. The double is more desirable than the single, and when it is once established in the yard it can be kept up to a high standard in color and doubleness by carefully culling out the singles and poorer colors. The seeds are self-sown and a multitude of little plants will appear every spring.

I have found no flower in the window that can excel the nicotiana and I have seen collections of fine plants where it was considered a rare flower and coddled as much as a fern or box begonia, and yet it is a common garden annual, easily grown from seeds, and self-growing when once established. It is not nearly so generally grown in the gardens as it should be. The flowers are pure white and borne on long stems. Cut the old plants back to the heavy foliage at the base when you take them up. One of the reasons I like this flower so well for window culture is its time of blooming. It opens its flowers about 4 o'clock in the afternoon and is at its best all evening, the beautiful pure white, star-shaped flowers glistening in the lamplight. The fragrance is strong and penetrating and liked by most people, though there are some who think it sickening. A single plant will scent a whole room.

Balsams are pretty, but to get them nice in form they have to be grown in the pots or else taken up before they are very large. They can not be cut back and made to make good blooming plants. They are quick growers and bloomers and the seeds germinate easily, so one can start a few plants early in the fall and have them in bloom during the winter. The flowers are borne along the stems and a very good plan is to cut out all side branches and have one tall pillar of bloom and foliage.

Tuberose that have not bloomed by fall can be taken up and potted and they will bloom in the window. The flowers are pure white, with heavy waxen petals, and a heavy, penetrating fragrance.

The hardy Russian violet is a dainty little flower for the window and there is no plant more easily grown. They are perfectly hardy in the open ground and will bloom both in the spring and fall in the garden. Then if taken up after they have had a good freeze and brought into the window they will bloom all winter. If they are not allowed to freeze they will all run to leaves when taken inside.

There are many other annuals and some of the hardy perennials that can be taken up and will bloom well in the window. Sweet alyssum, ageratum, verbenas, mignonette, dianthus, nigella, lobelia and calceolarias are all good bloomers and the columbine has given me some very fine flowers when taken up after a freeze and forced in the house.

THREE GREAT LABOR SAVERS.
IT IS (or should be) the aim of a man when he marries to take good care of his wife and provide for her comfort. Woman, however, is naturally self-sacrificing. While yet a bride she denies herself needful things in order that her husband may save money to

The style of the season \$5.98
To illustrate how quickly new styles are shown by the Charles William Dress Store, we display the new basque model introduced this summer at Fremet's Paris opening. When you are examining this in your home, Fifth Avenue shops will be showing it at their exhibitions. The basque model will dominate winter styles. This model specially designed for the Charles William customers is of lustrous Satin. The gracefully draped waist, soft girdle and modish pleated tunic give intensely becoming lines. Ample width for walking. Buttons of satin generously used. Semi-roll collar of fresh hemstitched linen. At our price you are making an unusual saving. Black, navy or Copenhagen. Sizes 32 to 44. State color and size. No. 2457A1625 Prepaid, \$5.98 2457A1625

All-Wool Serge Dress

\$6.00
Value **\$3.98**

XHD1—A real bargain offer. Dress of exceptionally pretty style, made of all-wool serge in navy, brown, wine or black. Bodice becomingly bloused, has pretty tailored revers and displays a dressy trimming in its vest and collar of dainty Oriental lace. The plaited panel in skirt offers a pleasing effect. Hooks in front beneath the single fold. This is only one of the many stylish "Standard" dresses offered in the new Fall Bulletin. (Ladies' sizes 34 to 44 bust; misses' 14 to 18 years.) Special postpaid in the U. S. **\$3.98**

Stylish Fall Dresses Your Choice **\$3.98**

This is your opportunity to save money. Get these charming new dresses promptly. Only a few thousand left. They won't last long, so order at once.

Velvet Corduroy Dress \$6.00 Value **\$3.98**

XHD4—Velvet Corduroy is at its best when employed in the simple tailored effects offered in this lot. The dress illustrated is of a particularly graceful, trim style, and the material is a very fine, staunch quality. Effectively trimmed with novel new girde of mercerized imported moire and collar and cuffs of Oriental lace. Tiny buttons provide an appropriate finish. Closed in front beneath a narrow fold and comes in narrow fold and comes in navy, brown or wine. Ladies' sizes, 34 to 44 bust; misses, 14 to 18 years. These handsome tailored dresses all bargains at \$6. special post-paid in the U. S. **\$3.98**

Handsome All-Wool Serge Russian Skirt \$4.00 Value **\$2.67**

HS267—Stunning, new skirt with perfect-fitting girde top and graceful hanging Russian tunic. Broad silk taffeta band and button-trimmed fold. Accordion plaited serge underskirt. Hooks at side. Comes in navy blue, black, tan or gray. (Sizes 22 to 30-inch waist and 37 to 43-inch lengths.) A dressy \$4.00 skirt. Special, postpaid in the United States. **\$2.67**

Stout **\$3.50**
Sizes
HS350—Same as HS267 in stout sizes, 31 to 38-in. waists. Post-paid **\$3.50**

Special 3-Piece Dress Offer **\$1.59**

H3R159—Special 3-dress offer. Pretty splendidly made dresses that'll give a full six months' wear. One dress is of tan linen, banded with blue and prettily embroidered; another is of blue linen with black-and-white stripe trimming, and the third is of blue Scotch plaid Gingham with full gored skirt, scalloped embroidery edging, etc. (Sizes 6 to 14 years.) A big bargain. These excellent dresses, postpaid in the U. S. **3 for \$1.59**

buy implements and other things for use on the farm. In many nerve-racking ways she economizes in full faith that her husband will so appreciate and love her all the more for her sacrifices, that he will be pleased to "make good" to her as soon as his finances will permit. But in how many cases does this work out as she fondly hopes it will? Far too many farm women continue to perform their tasks patiently in the "old-fashioned way." The men folks buy all sorts of up-to-date machinery to lighten and increase their labor, which is, of course, the very thing to do, but how about the women folks? We need improved machinery too. Such things as the little gasoline engine washing machines, gasoline flat irons, etc., that can and do lighten the work of the housewife, should be provided. As we use a small gasoline engine to help lighten the work about the house, I will endeavor to tell what can be done with one. There is such a cry these days about the scarcity of help, and with reason, as it is hard, or almost impossible to get help. But why stand and rub on the old wash board or turn the washing machine or churn, etc. when for a few dollars a small gasoline engine can be purchased which will do the hardest part of the work. Some may say, "that is all right if we could afford it." But, really, one cannot afford to do without this help considering the amount of work and time saved. With me wash day is play since the engine does the work and how delighted the boys are to run it. I do a large washing and churning with about 15 cents worth of gasoline. I have a power washer and wringer, and let me say that I would not do without this outfit for several times its cost. I consider it the greatest labor saver for the farmer's wife. Everyone who still washes by the old method knows how "back-breaking" it is. It also takes longer to do the washing and the clothes are never as clean and white as when a washing machine is used. I am sure that no one after using a washer will be willing to part with it for two or three times its cost, provided another could not be secured. Our little gasoline engine runs the churn and cream separator. We put a small wooden pulley on the churn, which was made by sawing off a round block of wood about four or five inches wide so it would not split easily. Then we bored a hole in the center and fastened it on the churn shaft. Then we obtained a friction pulley for the cream separator so as to start the separator slowly, bringing it up in speed.

As our little engine has two pulleys on it, we can run the washing machine and churn at the same time. Other uses for the small engine are sawing wood, turning the grindstone, using a wooden pulley the same as the one used on the churn. We use the cream separator pulley on the fanning mill. It can easily be seen what a time and labor saver a small gasoline engine is, doing a considerable amount of work on about one gallon of gasoline a day. Before we purchased our little engine, we wrote to all the engine advertisers in UP-TO-DATE FARMING and got their literature. We thought this the best thing to do, as we would have more than one kind to select from and might be able to save a little money by doing so. The engine is made by one of the largest manufacturers in America. It has never given us any trouble at all. I have used a gasoline flat iron for some time and find it a very great labor, time and money saver. Two cents worth of gasoline will do an ordinary ironing. I would not think of doing without one. It has never caused me the least bit of trouble, and I think it is as perfectly safe with ordinary care as a kerosene lamp. To those readers of UP-TO-DATE FARMING who are not using a gasoline engine, washing machine, and gasoline flat iron, let me say that these are three of the greatest labor, time and money savers you can buy.—Mrs. L. M. Underwood, Tunnel Hill, Ill.

What is Now the Fashion

6805—LADIES' BLOUSE. This is a one-piece model, sleeves and body being in a single piece. The neck is slightly open and is trimmed with a very pretty and stylish flare collar, standing close to the neck in the back and turning back from it at the sides and front. There is a little loose material under the arms, but not overmuch, and the sleeves end just below the elbow. The edges are given a fancy finish by tiny revers. Sizes 34 to 44 inches bust measure. Medium size requires 1 1/2 yards of 36-inch material.

6364—LADIES' SKIRT. This may be worn with the blouse already described, as well as with many others. It is a two-piece design, with a seam at either side. High or regulation waistline may be used and buttons placed at each side seam as far as the flare. Sizes 22 to 30 inches waist measure. Medium size requires 2 1/2 yards of 36-inch material.

6788—HOUSE DRESS. This shows a model with reversible fronts. These are entirely double, so that the frock may be closed at either side, or first with the right side exposed, and then, when that gets a trifle soiled, with the left side. Another advantage of this dress is that the waistline may be made adjustable for wear with or without corsets by making two or three buttonholes in the belt and placing the buttons at intervals. The blouse portion of this dress is regulation in every respect, with small armhole and front closing. The skirt has four gores. Sizes 34 to 46 inches bust measure. Medium size requires 4 1/2 yards of 36-inch material.

6821—HOUSE DRESS. Made with the very low drop shoulder, front and back being in one piece. The skirt has three gores and may have either style of waistline. Sizes 34 to 44 inches bust measure. Medium size requires 3 1/2 yards of 36-inch material, with one-half yard of 7-inch contrasting goods to trim.

6017—ROMPERS. These may be made with or without a center front seam, but there is one in the back where the closing is placed. The leg sections are in one with each half of the body. Sizes 2, 4 and 6 years. Medium size requires 1 1/2 yards of 36-inch material.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET of EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER of EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

TWO of our letters in this issue show a wonderful contrast in home scenes and conditions. Just think of the beautiful views in and around Pittsfield, Mass., as described in our first letter. Are they not remarkable? Now read the letter from Meadow, Tex. A vast level country and not a rock, a hill or even a tree in sight! Most of our young readers can scarcely realize that such a country could be, but those who studied geography thirty or forty years ago remember the great plains of Texas, sometimes called the great American desert. No one then thought that would ever be a farming country. Now we have a Cadet letter from there telling us more about it than we ever knew, and thousands of people live there. This is both a nation and an age of progress.

DEAR CADETS—I have read the Cadet page in UP-TO-DATE FARMING for more than two years and think it is fine. I am 18 years old and live on a 223-acre farm near Pittsfield, Mass. Pittsfield is a very nice place, it being in the center of the Berkshire country and in the heart of the Berkshire hills. The view of Lebanon valley, five miles to the west, is the finest in New England, and the view of Pittsfield from the great rock at the summit of Snake hill is magnificent, and in the distance towers Graylock, 3,500 feet above the level of the sea, and the highest point in Massachusetts. The many different lakes include Pontusog lake, Onota lake, Moorewood lake and Silver lake. Another interesting thing is the Balance Rock, a great big rock balanced on another not one-tenth its size. It was in Pittsfield that General LaFayette was given a reception in 1825. Pittsfield has its many charms, as have the western cities,

though I would like to go west and live in the western states. We have eight horses, but we do not keep cows. The farmers in the eastern states do not keep many cattle. They raise crops such as hay, corn, oats and potatoes and work with machinery. A country life is much better than that of the city. I live only three miles out of the city and one mile from the car line, so it is easy to get to the city and do trading and still live in the country in the open air. I would like to exchange post cards with the Cadets.—Helen L. Jones, Pittsfield, Mass.

DEAR CADETS—May a farmer girl, 18 years old, join you? Our farm is near the Susquehanna river, where we have fine times boat riding and fishing. I live in the country in the summer, but I board in town in winter so that I may attend high school. I will be a senior next terms. We have taken UP-TO-DATE several years and I like it very much. The farmers here are making hay (July 23). I would like to correspond with the Cadets.—Rachel Van Luvance, Wyalusing, Pa.

DEAR CADETS—We subscribed for UP-TO-DATE FARMING only recently, but I like it immensely, especially the Cadet page. I live in the cotton belt of Oklahoma, but cotton is gradually being displaced by grain crops. "Hog and hominy" is becoming the universal slogan here. I am 17 and will graduate from the twelfth grade next spring. I then expect to attend the agricultural school and specialize in farm demonstration work, as there is a promising field here in Oklahoma. I would like to receive letters or cards from all Cadets and will answer all.—Harvey Cline, Ardmore, Okla.

DEAR CADETS—I have been a reader of UP-TO-DATE for the past four years and I thought I would drop in to let you know we are farmers up this way too. We raise mostly peppermint, alfalfa, wheat, corn and oats, and all kinds of vegetables. We are having a very dry summer. I would be pleased to hear from the boys and girls of every state and promise to answer all who write. I am past 16, but am not yet

an old maid.—Susan M. Wisler, Wakarusa, Ind.

DEAR CADETS—Will you admit a West Texas girl to your page? My father has been a subscriber for UP-TO-DATE for three years and I love to read all the letters, especially those from the western states. I suppose it is because I have always lived in the west. My parents came to the plains twenty years ago, so you see I am an old-timer. I do not know how it looks in a timbered country, or a rough, broken country. We have no timber here and nothing that could be called a hill. Everything is so different now, though, to what it was twenty years ago. Then there were few people and fewer schools. All the schooling I had until I was 15 my brother and myself went seven miles to get, and as it was usually in the winter and we had to cross the canyon we went very little. You could ride miles and miles and never see a fence or a house. The prairie was covered with cattle and antelope went in bunches of from two and three to twenty-five and thirty. Sometimes for days and weeks we saw no one but cowboys, and how afraid we were of them at first, but we learned better. Eight years ago we moved about 125 miles farther south, where we now live. We hauled the lumber with us to build our house. Since then the railroad has come to within 17 miles of us. We have endured many hardships, still I love the plains and would not be willing to leave them, for I know I would not be satisfied. Most every one raises stock on a small scale, but this is mostly a farming country now, though there are still a few ranches. Will the Cadets please give me a card party any time? I will gladly answer every card which bears a name and address. I would love to receive scene cards from every state in the Union.—Hester Robinson, Meadow, Texas.

DEAR CADETS—I wish to let you know that UP-TO-DATE FARMING reaches Washington too. I greatly enjoy reading it, especially the Cadet department, and only wish it was printed oftener. I am nearly 16 and will enter second year high school this fall. I live on a 4,000-acre farm, of which about half is in wheat and the other half summer-fallow. I wish to become a Cadet of Equity and will answer all cards or letters I receive.—Vera Johnson, Hatton, Wash.

DEAR CADETS—I have been a reader of UP-TO-DATE for two years and I think it is a fine paper. I especially enjoy the Cadet page. I lived on a farm till about eight years ago and since that time have lived in the city. I am 18 and have a brother and sister both younger than myself. I am a junior in the high school. We have a new building which is just completed. Mt. Carmel is a city of about 7,500 people and it is situated in the midst of a good farming district in southeastern Illinois. I would be glad to hear from the Cadet boys and girls and will answer all who write.—Earl Cox, Mt. Carmel, Ill.

DEAR CADETS—I am 15 years old and live on a 180-acre farm in Ohio. My father just began to take UP-TO-DATE FARMING and I wanted to join the Cadets as soon as I read the letters in our first copy. I am keeping house for my father and two brothers this summer while my mother is away on a vacation. I love the farm, but I get a little lonesome sometimes and would like to exchange letters or cards with the Cadet boys and girls.—Thelma Nichols, Chardon, O.

Please note the distant points from which our letters come. UP-TO-DATE has a world-wide circulation.

A Little Complicated

"What are you digging that hole for?"
"Oh, I'm only fixing to replant some of my garden seeds."
"But that looks like one of my hens lying there."
"Yes, I have to plant her in order to replant my garden seeds."

The Wrong One

"Talk to me about hunting. I shot seventeen ducks in one day."
"Were they wild?"
"No, but the man that owned them was when I left."

Politeness Wins

She (to the registrar of voters)—Is there any reason why I should tell you my age?
"Indeed there is. If you tell me your age I will know exactly at what age a woman is most beautiful."

Kindly Disposed

"Did you ever notice that Dickie always sticks his head out of a window when he leaves on a train?"
"No, I suppose he is anxious to see everything as he passes out?"
"I think he knows everybody is glad he is leaving and he wants to give them a chance to know it."

Easy to Keep Them Warm

Mrs. B.—I'm really cold. Don't you hear my teeth chattering?
Mr. B.—Why don't you take them out and put them in your pocket?

Money or Fun

Slowgo—Do you know that a dollar saved is two dollars gained?
Fasty—I know that a dollar saved is a good time lost.

When Writing to Advertisers Please Mention Up-to-Date Farming

UP-TO-DATE FARMING, INDIANAPOLIS

THIS PONY FREE!

WE WILL GIVE YOU OR SOME
OTHER BOY OR GIRL THIS
PONY WITH COMPLETE OUTFIT

"BUTTERCUP"

"BUTTERCUP" is a beautiful black and white spotted Shetland Pony with long silky mane and tail. She is about 6 years old, stands 42 inches high and weighs around 350 pounds. We have already given away 233 ponies to boys and girls who joined our Pony Club and "Buttercup" is just as fine as any of these other 233 beautiful ponies. This is saying a great deal when you consider that we go around to all the big pony farms and pick out the very best ponies we can get for children. "Buttercup" is as gentle and lovable as any pet could be and is thoroughly broken to ride and drive. Hitched up to her nobby little pony cart, with her nickel trimmed harness flashing in the sunlight, she makes the prettiest picture you ever saw. Not only is she pretty, but she can carry along a whole buggy load of happy children at a fast clip—faster than many big horses can. Can you imagine anything you would like to own better than "Buttercup" and her complete outfit? Read this page through carefully and then send us your name and address so we can tell you just how you can get her for your own.

Here's "Buttercup"

THE OUTFIT

ALONG with "Buttercup" we send the finest and most complete Pony Outfit that you ever saw: A stylish four wheeled, pony buggy—strong and easy riding (just like the one in the picture) a handsome black nickel trimmed harness and a hand made saddle and Indian horsehair bridle. No matter how rich a child's parents may be they could hardly buy him a better or more complete outfit than the one we send with "Buttercup" to you or some other boy or girl. The horsehair bridle is made especially for us by an old cowboy at Deer Lodge, Montana, and is hand woven out of many colored horsehair—red, black, blue, yellow, green, and white. It is woven into remarkable Indian designs, mounted with fluffy tassels, and the reins end in a real cowboy quirt. You will be the first in your neighborhood to have one of these bridles if you send us your name and get "Buttercup" and the outfit. We had just as soon send this wonderful Pony Outfit to you as to any other boy or girl, but you must send your name and address right away so we can tell you all about our easy plan. Use the coupon below and mail it now.

Send Us Your Name Today If You Want To Own "Buttercup"

As soon as we hear from you we will tell you how to go ahead and get "BUTTERCUP" for your own. Our wonderful Pony Club is known all over the country because it gives real Shetland Ponies to boys and girls and you can have one of these ponies as well as any other child. Don't let anyone persuade you that you can't get beautiful little "BUTTERCUP" and her outfit because our plan of giving away ponies is different from others. The fact that we have already given away 233 ponies to boys and girls all over the United States, from the state of Vermont to the state of California, several going over 1800 miles from St. Paul, is proof that we give ponies away. The postmaster or banker in your town knows that the Webb Publishing Company of St. Paul, Minnesota established more than 30 years ago, is one of the largest publishing houses in the United States and can afford to give away ponies to advertise its papers. We never heard of one of the 233 children to whom we have already given ponies until they wrote us they wanted a pony and that is why you must send us your name and address at once if you want us to send you "BUTTERCUP" and her dandy outfit.

We Have Given Away 233 Ponies

Here are Pictures of Some of Our 233 Lucky Pony Winners and What They Say About the Ponies we Gave Them

"Roine," Clarence Busick, Adams Co., Indiana

"I live seven miles from Decatur, Ind. I got a pony from The Farmer's Wife Club. My pony's name is 'Roine.' When I go to the gate and whistle 'Roine' will come to me. I drive him to school with my three sisters. The scholars think that is one of the nicest outfits that a boy could have to go to school with. Before The Farmer's Wife gave 'Roine' to me I was absent from school for more than a year because I was sick and it was too far for me to walk. When the doctor heard I had won a pony he said it was one of the finest things I could have for my condition, to be out of doors all the time. This was quite interesting to me, and I am glad to say I am now well again, and the doctor says 'Roine' has done his share in it, and also The Farmer's Wife of St. Paul, Minnesota, who gave him to me."

Clarence F. Busick, Adams County, Indiana, is one of our Lucky Pony Winners, and here is his picture and part of his story.

"Jerry," Cieta Johnson, Douglas Co., Kansas

"I have the dearest little black Shetland Pony named 'Jerry' which The Farmer's Wife sent me free all the way from St. Paul up in Minnesota out here to Lawrence, Kans. 'When I first started out to get my friends to help me win a pony, I can tell you it was pretty hard work. Some of them laughed at me and made fun of me and said: 'Oh, you can't win a pony.' However, I joined the Pony Club, and now have 'Jerry' as proof that the company did as they agreed. 'I took 'Jerry' down to the Douglas County Fair at Lawrence, Kansas, to see if he could win a prize, and he took the first prize of \$6.00 in cash over all the ponies there. When they tied the blue ribbon on 'Jerry' he acted more proud than ever, and how the people in the Grand Stand clapped their hands and cheered."

This is a part of a letter written by Cieta Johnson, Douglas Co., Kans., who is another of our 233 Lucky Pony Winners.

"Sonny," Elmer Hoth, Allamakee Co., Iowa

"I am a little boy 10 years old. I weigh 87 pounds and have light hair and blue eyes. But what I want to tell you about is my pony 'Sonny,' which the Webb Publishing Company, publishers of The Farmer's Wife, gave me. 'Sonny' is the finest pony in these parts and he and his outfit are better than \$500 to me."

"I went to the depot to meet my pony the day he came. I could hear him whinnying, but could not see him. Then I saw him in a little crate in the express car. They lifted him down and I took him out of the crate and I was so happy I couldn't talk."

"I have lots and lots of good fun with 'Sonny' and no money could buy him. He goes as fast as he can when we go after the cows at night. I am never going to sell him, and 'Sonny' is so good he makes me feel happy all the time."

This is what Elmer Hoth of Allamakee County, Iowa, has to say, because he, too, is one of our 233 Lucky Pony Winners.

"Mac," Ruth Mead, Saline Co., Missouri

"I shall never forget my first drive to town with the Shetland Pony which The Farmer's Wife gave me. We hitched 'Mac' to my beautiful little cart, and as we drove through Main Street we attracted as much attention as if we had been a circus parade, for it was the only pony outfit in town. Men, women and children came out and stood all around to look at 'Mac' and pet him, and how proud of him I did feel."

"He is so gentle and good natured and will stand with his fore feet on the porch or on a box and let us slide off his back to the ground. I wish every little boy and girl had a pony and cart like mine and had the jolly time I have with 'Mac,' and I hope they will join The Farmer's Wife Pony Club and get a pony half as nice as 'Mac.'"

Ruth Mead, a little girl in Saline County, Mo., still another of our 233 Lucky Pony Winners, writes this and a lot more about the Shetland Pony we gave her.

Notice we print the photographs of these four of our 233 Lucky Pony Winners and the ponies we gave them free which proves that we really do give away live Shetland Ponies. Furthermore we will send you the names of all our 233 Lucky Pony Winners just as soon as we hear from you. Possibly some of these happy children live in your county or a county near you and, if so, you are the lucky child to get "Buttercup" and her whole outfit will be shipped without one cent of cost to you. If you send us your name the day you read this, we will send you 1000 votes for "Buttercup" and a big surprise that will double your chances of getting a Shetland Pony.

EVERY MEMBER A PRIZE WINNER

Every single child who sends us his name and joins our Pony Club will receive a handsome prize of his own choosing. Besides the Pony Outfit (and the Big Surprise we have for you) we will give Bicycles Diamond Rings, Sewing Machines, Rifles, Cameras, Gold Watches, Flashlights and many other wonderful rewards that you never could get until now. If you become a member of our Pony Club you can't lose. But don't let anybody persuade you that you can't get "Buttercup" because you have the same chance as any other boy or girl.

"I have been a subscriber to Up-to-Date Farming 2½ years and I'll never regret the day I first subscribed. I follow its advice about marketing and have better results than from any other advice."—Martin L. Elsey, Bardwell, Kentucky.

UP-TO-DATE FARMING

17th Year

October First, 1914

Number 19

Does This Remind You?

The Mission of this paper is to give farmers a balanced education---as much on marketing as on producing---and to help them to get more money for their crops

LEWIS "VI"

Monarch of the Sixes

When Every Hill Seems A Level Road

IN constructing the power unit of the Lewis Six we gave particular consideration to the fact that it would be used over some of the roughest roads in the country. We knew that its users would demand unusual power of it in climbing the steepest hills. We therefore produced a motor of such a character as to make every hill seem like a level boulevard.

When you are driving a Lewis Six you feel a certain confidence which is hardly possible with any other automobile even those which cost twice as much. There is no need of shifting gears when you come to a hill. You simply run on high speed and pass up the steepest inclines with an ease and speed which surprises you.

This is the kind of a car that one wants for hard driving. Its long wheel base—its ample springs and splendid riding qualities make the roughest roads seem smooth, while its tremendous power coupled with an almost incredible small gasoline consumption make it one of the most desirable cars on the market.

135 Inch Wheelbase—6 Cylinder—40 H. P.—6 Passenger

Lowest Prices Ever Made On World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing— Lasts as Long as the Building Stands

That's the kind of roof you want to invest your money in, isn't it? All roofing you have ever bought heretofore had three cost prices—the first cost per square laid on the roof—the cost per year for up-keep—the cost of property damage by leaks. Here then, is *real* roofing economy.

Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end for all time.

Its cost per square is the lowest ever made. It has no up-keep cost. Its property protection is absolute. Its years of service, as long as the building stands. Always beautiful in appearance. *Guaranteed Fire-proof, and Lightning-Proof. Reducing the cost of your fire insurance.*

EDWARDS Exclusive Tightcote Process Makes Rust-Proof Roofing

The Edwards process of galvanizing makes the zinc spelter practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingles, Grip Lock Roofing, Pressed Standing Seam or Roll Roofing is dipped in a bath of molten zinc, one at a time after the metal has been stamped and resquared. This insures a uniformity. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to the rain, snow, frost, acids or anything that eats or destroys a steel roof.

How to Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with the finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking—not a space on the metal the size of a pin-point exposed to rust.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking—Protects Nail Holes—They Can't Leak or Rust

This device not only takes care of expansion and contraction so that an EDWARDS Steel Roof never warps, buckles or breaks, but it is so designed that nails are driven through the *under* layer of metal only—nail holes are protected from exposure—cannot rust. No special tools or experience needed to lay it—anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles

cost less—outwears three ordinary roofs and are your joy and pride forever. A most beautiful roof.

No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs. We manufacture and sell all of the many patterns of Edwards Reo Steel Shingles, V-Crimped, Corrugated, Standing Seam Roofing, Siding, Ceiling, etc., painted or galvanized, and all other kinds of the best grade of sheet metal building material.

Freight Paid Factory Prices

This is positively the greatest roofing proposition ever made. You can't afford to neglect investigation. All we ask is a chance to prove to you that we do indeed offer the lowest prices ever made on the world's best steel roofing. Won't you write today for our freight prepaid price and be convinced. We

are the largest manufacturers of Iron and Steel Roofing in the world. We sell direct to you from the largest, most modern sheet metal plant in existence. We save you all in-between middlemen's profits. Because of our immense purchasing power of raw materials—our wonderful manufacturing facilities and enormous output, our prices are rock bottom. We prepay freight and give you a binding guarantee against lightning losses.

FREE—Our Big Roofing Book—FREE

No matter whether your building is a corn-crib, barn, shed or mansion. Don't for an instant consider investing your money in roofing of any kind until you have received our Roofing Book, illustrating and describing every conceivable kind of Sheet Metal Roofing and Building Material—special offer and free samples of Steel Roofing. Postal or coupon brings FREE copy of Roofing Book No. 691

The Edwards Manufacturing Co.,

Big Money in Fruit and Vegetables

Fortunes Are Being Made

every year in Florida out of Fruits and Early Vegetables. Not a better spot in the whole state than BAY VIEW. Our big, free, handsome illustrated Book will prove it to you. Soil is deep, rich, sandy loam—very exceptional for Florida. Sample of this soil mailed free with literature. Plenty of rainfall 12 months in the year. Irrigation is unheard of. Crop failures practically unknown. Two and three crops easily raised each year on the same ground. \$50 to \$500 profit per acre each year. Satsuma oranges, figs, pears, peaches, plums, grapes and all kinds of berries produce abundantly. You can also raise enormous crops of corn, oats, hay, Japanese cane, clover, sweet and Irish potatoes, sugar cane, celery, tomatoes, lettuce, cabbage, watermelons, cantaloupes, egg plant, cucumbers, radishes, turnips and all kinds of early profitable vegetables. Ideal location for Dairying and Stock Raising. Ready markets and good prices. Grass for pasture the year round. Don't have to stable and dry feed six months in the year. One of the finest climates in the United States, both summer and winter. No sunstrokes in summer—no frosts in winter. Ideal salt water bathing, fishing. Lumber at wholesale prices. Good stores, churches and schools. WRITE TO-DAY FOR FREE BOOK, SAMPLE OF SOIL, MAPS, ETC.

What We Want You to Know and Why

Being a Few Words on Particular Matters

Publicity: An Effective Weapon When Rightly Used

nobody's business that many a crime has been committed against progressive prosperity when it might have been prevented by timely, well-directed publicity. As a case in point, the immediate and rapid rise in the retail prices on all food supplies at the outbreak of the European war. The country, already almost in open rebellion against the high cost of living, became thoroughly aroused and investigations everywhere were begun. The effect has been wholesome. The actual costs have been made known, and public sentiment is at last based on inside information. This counteracts upon the voluntary efforts of speculators to seize upon any excuse to advance prices. Let the light continue to shine.

The Express Companies and the Parcel Post

merce Commission, the operating income of the eleven express companies is now only 15 per cent of what it was a little over a year ago, due wholly to the business taken from them by the parcel post. During the ten months ending with April, 1914, one of the largest express companies alone took in \$466,258 less than it paid out to operate, and after paying its increased taxes reported a net loss of \$635,657 for the ten months' operations.

Such conditions will necessitate a radical readjustment of the express business, and this problem the companies must face and solve, or go into dissolution, in which case the government or the railroads would be under the necessity of taking over the business now being done by the express companies.

Alfalfa Seed from Turkestan

At the present time practically one-fifth of the alfalfa seed in the United States is imported, and 95 per cent of the imports comes from Russian Turkestan. It costs less, says the Department of Agriculture, even after importation, than domestic grown seed, but because of a mistaken idea of its superiority, dealers often charge more at retail than they ask for the domestic. Turkestan alfalfa is practically unsuited to the humid climate of Eastern United States, where it is chiefly used, and it is not sufficiently hardy for the upper Mississippi Valley. This applies to the commercial Turkestan seed, and not to certain distinct varieties, which are hardy and valuable, and which come from Turkestan, but at present these are only used in experimental breeding. Farmers may readily detect commercial Turkestan alfalfa seed, for it almost invariably contains seeds of the Russian knapweed, and these seeds are found in no other alfalfa seed. These seeds are slightly larger than alfalfa seed, and are a chalk white in color and slightly wedge shaped. They are not very numerous, and small samples of alfalfa seed may not contain any. Alfalfa seed should be examined in bulk.

The Era of Engines on the Average Farm

Time was when the man, the ox and the horse were the only source of power on any farm. The engine, however, on the larger farms and in the most important farm labors, has gone far to supplant animal power, and during the recent years inventors have been very industrious and fairly successful in building more efficient power machinery for farming operations, until today we are entering upon an era of mechanical power for the average farmer. Oats and oil are entering into competition, or a tug of war, to see which shall have first place as fuel for farm power, oats to use the bone and sinew of the horse, oil to use the steel of machinery. World-wide conditions are proving to be an ally of the engine, for a system of farming is going to be needed where horse-power will be insufficient, and the foodstuffs consumed by work-horses will be needed to supply food products for human beings. Thus oil will in the end rout oats and corn and hay from their supremacy as power-fuel, and the engine will supplant the horse. Not entirely, of course. Time will never come when the horse will cease to be a valuable source of power on the farm. But the future demands upon agriculture will be such that horse-power alone cannot meet, and the horse must lose first place as a world's power.

MORAL—Study your farm for possibilities for mechanical power.

Tell Us About Your Farm

Farming is about the most interesting thing there is to a farmer. The story of a farm and its management, its failures and its successes, is more interesting and much more valuable to the reading farmer than any other kind of a story he can read. Your story, reader, will be interesting to him. Tell us about your farm, yourself and your family. Send us a photograph of yourself, your buildings and your stock. Tell us how many acres you have, what crops you raise, what rotation you practice, what yields you secure, what stock you keep and how much you make from them. Tell us what troubles you may have in either growing or marketing your crops. Tell us how long you have owned your farm, how much you paid for it, what improvements you have made and hope to make. Tell us all about your work. Not only will this be interesting to all our readers, but it will be helpful to many, and helpful to you. Our editorial staff will read your story with the view of helping you with your problems or by any suggestion we can make to further your success. UP-TO-DATE FARMING is a paper of service. We are anxious to serve each reader. Do not hesitate to write because you feel an inability to write as you think the story should be written. Just tell us all about it and we will attend to all the rest. Send us photographs and a plat of your farm. The photographs will be returned in perfect condition, and we will pay for all stories we can find room to print. Come along, now, and we will put UP-TO-DATE FARMING still further in the lead of all farm papers.

Balanced Rations

The farm boy of today will be the farmer of tomorrow.

Practice deep plowing in the fall. That is the best time.

Get your seed corn picked and stored before freezing cold weather.

A soft word drives deeper into a hard heart than a sharp tongue.

The only way to build a permanent road is to keep permanently at it.

A local union or club is the first and most important step in rural uplift.

Do your neighbors read UP-TO-DATE FARMING? Loan them a copy and ask them to subscribe.

Phosphate applied to clover fields in the fall will greatly increase the next season's yields.

Are all the tools you are not going to need until next season snugly enclosed under shelter?

Keep constantly on the lookout for time-savers and step-savers. Such things are money-makers.

Deal with every problem with an open mind. Don't guess, but come as near knowing all about it as you can.

You have money invested in those pigs. Don't let the cholera rob you. Clean up things. Use the ounce of prevention now.

When one looks for the live stock farmer who makes the most money one soon discovers what kind of live stock pays best.

Ordinary whitewash, to which crude carbolic acid has been added, is both a cheap and excellent disinfectant. Apply with a spray pump.

Every farmer who cuts up much corn fodder should have a good fodder rack equipped with a lifting crane that will load a shock at a time.

Good earth roads need but little attention, but it must be given promptly at the right time and in the right manner. else the roads will not be good.

Many good farmers declare they can handle corn in the silo as cheaply as they can handle it as fodder. Silage makes the best feed with the least waste.

Have your barn and poultry house wind-tight before the cold winds come. Wind-tight does not mean air-tight, however. You need ventilation, but no drafts.

After building a cellar wall and a barn basement of stone we don't believe there is any such thing as a free mason, but then, perhaps, we are an odd fellow.

The man who goes into debt for a farm today must pay for it from the profits on the sale of his produce. The land itself does not grow in value now as it did years ago.

The Colorado Experiment Station has discovered that corn smut doesn't hurt cattle. Now it is up to that or some other station to discover that it does them any good.

Some farmers do not believe in fertilizer, yet they know the value of manure. Well, manure is valuable because it contains nitrogen and phosphorus. So does fertilizer.

PUZZLE: FIND THE SEVEN BILLIONS

CARTOON FROM INDIANAPOLIS STAR

"The farmers here have let the middlemen get them completely under control and they told them day before yesterday that they (the farmers) would have to take just what was offered for the produce brought in. The highest price paid for tomatoes was 19c for 24 quarts, including the basket, which cost 6c. The average price has been from 10c to 12c."—E. D., Sussex County, Delaware.

A Lesson from the Onion Crop

THE ONION CROP affords the farmer an unmistakable lesson in the necessity for concentrated action—co-operation.

The muck lands of northern Indiana are better adapted to growing onions than any other crop and the farmers of that region are extensive onion growers. Recently, however, the financial end of the crop has not been very encouraging. Last year in some places the crop was almost destroyed by a hail storm which came just before the onions were ready to be harvested. The beating by the hail caused them to rot and heavy losses were the result. Two years ago there was so great a production that under the prevalent system the demand was more than supplied and the price was so low that much of the crop was not harvested, because the price would not pay for gathering and marketing. We are informed that the crop is extra good this season and the growers are in serious doubt as to what the demand and price may be.

There can be no doubt as to the demand. Onions are a product in almost universal use and they are produced in marketable quantities in only a few small sections of the United States. It is true that almost every farm garden has its onion bed, but these seldom do more than produce

enough for the home use during the growing season. It is very rare that any go to the market from these gardens.

The few localities, then, that make onions a field crop must supply the demand of the whole country. The great question, therefore, is distribution—the supply must know and find the demand. Here is where the onion growers fall down. They find that their business ends with the growing, gathering and marketing on terms made by others, whereas the most important thing for them to know is where the demand is and how to get the supply to it. Suppose the onion growers in the few heavy producing sections were organized and controlled their crops—they could have access to the very information upon which their profits—demand and fair prices—depend, because the demand would express itself to the head of the organization. With this knowledge, and other help such an organization would give them, there would never be any danger of an oversupplied market, for the onions are needed practically everywhere and for nearly a year. It is the speculative buyers, who do not try to reach all the demand at reasonable prices, but that part that will pay a high price, that make the apparent overproduction and cause a much-needed product to rot in the fields.

What Others Say and What We Think of It

"Agriculture is the foundation of manufacture and commerce."—The Farm Home. Farmers, we are in on the ground floor.

"There's little feeding value in a roasting ear."—Harley Hatch. That may be, but let us make the most of the high cost of living while we have it handy.

If some genius like Burbank would only originate a variety of alfalfa equipped with a self-starter! (We said this ourselves, but we don't think much of it.)

"Politics and agriculture don't seem to mix very well."—The Prairie Farmer. The reason may be found in the fact that the politicians insist on doing all the mixing.

"The good roads fever is sweeping the country and it is a disease to be welcomed."—The Banker Farmer. But the trouble is it makes a lot of quack road doctors who need watching.

"The greatest fair of the greatest state of the greatest nation on earth."—The Farm Home, of Springfield, Ill., speaking of the Illinois state fair. Forty-seven other states are saying the same thing.

"Without exacting unjust tribute from the unfortunate the farmer should insist on a proper price."—Missouri Valley Farmer. And the only way to insist is with a farmers' club (organization).

"Let us pray that as long as the world endures the United States may never have to resort to the horrors of war to settle quarrels."—The Ohio Farmer. And in the meantime Uncle Sam will see to it that his powder is kept dry.

"Just because you have outgrown your enthusiasm for a ball game do not get into the way of thinking that the boys will not enjoy a day off to attend one now and then."—Southern Agriculturist. No one ever outgrows real enthusiasm for baseball. If you haven't got it you never had it.

"Farmers who organize for business purposes should always do so with the aid and counsel of a competent attorney, a man who knows the laws under which the organization must operate and the liability which each member of it must assume under those laws. This precaution has too frequently been neglected by farmers to their subsequent sorrow."—National Stockman and Farmer. Mighty good advice.

"The farmer needs to associate more with farmers. The farming community needs to get together and study the difficulties that disturb business and curtail farm profits, and devise intelligent methods for getting rid of these difficulties."—Home and Farm. The difficulties do not need much study—they are pretty thoroughly known by all. Intelligent methods for getting rid of them have been devised long ago. The only remaining thing is for the farming community to get together.

EDITORIAL

State and National Commissions

IT IS ABSOLUTELY necessary to progress, to success in life, to human happiness and better living, that a degree of economy be practiced in the home, and that expenditures be kept within reasonable limits. But all this is just as necessary in public as it is in private—in the government as it is in the home. In fact, there is greater danger of reckless and unprofitable expenditure in public than in private life. It is easier to spend other people's money than our own. The truth is, public expenditures have grown beyond all reason, and law-makers seem to have quit asking themselves whether or not expenditures they authorize will be worth what they cost the people who must furnish the money.

Consider the appointment of commissions. In the early history of popular government legislators and congressmen felt it their duty to inform themselves as to public matters, so that they could act upon their own information. It is not so now. No matter what congress may want to know, or what the people may want to know, a commission must be appointed to study it. These commissions are always expensive, but they are not always useful. Many times they are not worth a penny to the public.

Representative Charles Lieb of Indiana, has done an inestimable service in calling attention to the recklessness of this commission business. "We cannot deny," says Mr. Lieb, "that commission creates commission, and that a mania for the creation of commissions can develop into more mania for the creation of more commissions."

To give a better idea of the nature of these commissions and their cost, we give the following list, authoritatively compiled by Congressman Lieb. It only covers a period from 1899 to 1910, and is not complete at that. Even the European rural credits commission and the country life commission are omitted:

Industrial commission (tariff and trusts)	\$323,233
Postal service commission	22,000
Canadian commission	49,000

International prison commission	23,439
Behring sea commission	700
Commission on New Mexico land grants	9,994
California debris commission	150,284
Merchant marine commission	16,838
Coal strike commission	51,000
Extension of capitol commission	12,400
International navigation commission	16,436
National monetary commission	145,115
Immigration commission (partly estimated)	851,175
Second class mail commission	10,534
Commission on business methods in postoffices	78,206
Bonding companies commission	10,000
St. John's river commission	5,000
Jamestown tercentennial commission	32,766
International waterways commission	73,528
Appropriation for tariff board	250,000
Commission on overhauling public business	200,000
Fine arts commission	10,000

Study those commissions and what they cost the nation. How many of them were worth to the people the money they drew from the national treasury? How many of them were worth anything to the general public—to the people who must supply the government with the money it spends? And there is so little evidence that the work of these commissions has been of any benefit whatever.

But the nation is not alone in this strange mania, as Mr. Lieb calls it. The State legislatures have it also, and are constantly appointing commissions at similar cost to the people. We call attention to these matters, as Representative Lieb did, purely from an educational standpoint. The people are the constitutional rulers as well as the money-furnishers, and they must know what is being done in order to hold their representatives responsible. This is only one of the many inexcusable things that are becoming more and more common in Congress and the legislatures; things whose mere suggestion would have created open-eyed astonishment only a few years ago. Yes, we admit we are progressing, and in all walks of life things are accomplished now that were not believed possible within the time of people now living, but that is no excuse for this mania for commission appointments, the employment of newly created official bodies, to do or pretend to do what the representatives of the people were themselves chosen to do.

Financing Crops

THE COTTON SITUATION in the south this year has awakened new interest in the ability of farmers to hold their crops instead of hurrying them away to the first market after harvesting them. This first market is essentially a speculative market. The stuff is not bought for use, but to be held and sold again with as much profit margin between the buying and selling price as it is possible to make. We have contended that the farmers ought to be able to hold a due portion of their crops so that they could themselves sell upon the demand market instead of upon the glutted speculative market.

As we have said, the cotton situation in the south has brought this fact out more strongly than ever before. The trade and shipping disturbances that resulted from the European war affected the cotton market in a different way than that of any other crop. So much of American cotton went abroad to supply foreign mills that when shipment abroad seemed impossible or at least hazardous, the cotton market was paralyzed and prices went so low as to make the selling of the cotton by the growers an act leading to bankruptcy. But as the growers had been accustomed to sell in the first market, they were depending upon the proceeds at the time of gathering the crop. Hence

they were not prepared to hold even for a brief period unless they could get financial help from some other source. So imperative was this situation that the national and state governments have taken it up and have tried to devise means of relief.

The secretary of the treasury has planned the issue through the national banks of a currency to be made available for this purpose. This currency may be obtained by the cotton growers on warehouse certificates or receipts up to 75 per cent of the value of the cotton so deposited. Whether or not that value is to be estimated on present depressed prices does not matter, for the cotton thus stored belongs to the growers and may be sold when the grower chooses, at the price prevailing at the time of sale, hence the grower gets the benefit. The loan is to tide him over his difficulty and enable him to hold his crop to a more favorable selling period.

It is contended by some that the government should do this direct, without using the banks as a go-between, but this is really not a government function and if the treasury itself were to undertake such a thing it would give rise to complications innumerable. So we think the wiser course is the one that has been adopted. But is it the best that could be done? Would it not be better if the farmers themselves, in a co-operative capacity, could finance their own crops—not only the

cotton crop, but all the staple crops? This would make them masters of their own business and it could easily and certainly be effected by a nation-

wide marketing system such as has been proposed by the farm organizations and could be readily accomplished by the Farmers' Federation.

City Prices Arbitrarily High

WE HAVE often given satisfying proof that prices rise arbitrarily on the road between the farmer and the user, and such proofs continue and multiply. "In my judgment," says Harley E. Burns, United States assistant district attorney in Ohio, after a special investigation, "the information given me this week is sufficiently clear as to the existence of a combination to control the price of meats, flour and groceries to the retailers."

Of course the great war in Europe has unsettled everything and has given an opportunity for exaggeration in many lines, and it is not at all surprising that speculating price makers, the combines spoken of by Burns, should take advantage of the opportunity thus afforded to increase their profits at the expense of the users of the goods.

Among other things Mr. Burns learned that one wholesale firm in received over a million pounds of granulated sugar during one week. This induced him to believe that that city is to be made a storage center for large quantities of sugar. The company referred to, he says, received daily consignments of from five to six cars, the shipments amounting

to at least forty cars during the week of which he was speaking. Each car has a capacity of 35,000 pounds.

This, of course, is only an instance. What has been done in other combination cities we are not informed. Of course this does not indicate a scarcity of sugar, but it is proof that the supply is gathered up and held by the combines that they may raise the price in the midst of the business confusion resulting from the war. The government has taken the matter up, not only as to the arbitrary price of sugar, but of other commodities as well, and proposes to investigate the high price conditions. We believe that was a proper thing to do. But in such work the government has never proven very effective. Public officials seem to hesitate and go slow. Like too many parents in dealing with their children, they tell the combines they "mustn't do it," and then turn their backs to avoid any enforcement measures. It is only another proof that producers and consumers must co-operate to control both the supply and its distribution. That is the only way equitable prices can be established and maintained, and when so established both production and consumption will be increased and the wants of the people far better supplied.

"Butter Scarce and High"

THAT has been the cry in the consuming sections all summer, hasn't it? Prices have been so high in the cities that consumers could scarcely afford to use it. According to the Associated Warehouses report, says a dispatch from Washington, there were held in forty-five leading plants, on July 1, 43,173,500 pounds of butter. Of this amount fully 7,173,500 pounds were carried over last season, leaving the actual amount stored during June 36,000,000 pounds.

Why was not this vast quantity put on the market when butter was so scarce and high? Because it would have forced down the speculators' retail price to consumers and it paid them better to hide it away and join in the howl that farmers were not producing enough. The cry is much the same all over the country concerning all crops. The claim to producers is that prices are high because there is not enough produced, and yet the facts are, as in the case of butter shown above, that surpluses are hidden away in storage or exported to foreign countries to prevent a reduction of retail prices. Farmers do not

want to produce less. They are anxious to produce more, but they want their products to go to the consumers at reasonable prices. They do not want the crops boomed and boosted at harvest time as an excuse for rapid marketing at low prices, and then hidden or exported to be followed by a cry of scarcity so as to make high prices and altogether unreasonable profits when sold to the consumers. That is the way these things are done and it is the way they have been done for years. It reduces consumption and it discourages production—there is too much at harvest time and not enough at eating time.

We do not object to storage. It is the proper thing. All products have their season for production and harvest; the time of need is the entire year. To meet the need portions must be held over. But why can not the farmers themselves hold it and let it go at fair prices as the need requires it? That is the greatest reform of the ages and it would easily be accomplished but for the selfish interests that control the present system and that are boomed and boosted by the press, the schools and the official departments of the country. Regardless of these it must be accomplished.

Successful Work in Idaho

THE Farmers Society of Equity is doing a successful work in Idaho. From an article in the Halley (Idaho) Times of August 19 we learn that the society has handled forty car loads of farm implements, and as they do business on a cash basis and make prompt payments the factories are very anxious to continue selling to them. They have also purchased \$90,000 worth of grain bags, and the largest bag companies on the coast are doing all within their power to get the society's business. They handled \$100,000 worth of grain in December, 1913, and got the grower from 10 to 15 cents per hundred more than the regular dealers were paying. They can sell the grain, they say, as

high as any concern doing business, as they have direct outlets with the coast markets as well as with the export trade. They have handled several car loads of binder twine and their price to the growers at all points has been under 12 cents, while the local dealers have sold as high as 14 cents. They have sold many car loads at 10½ cents to the users. The society's shipments of lumber have been very heavy and they have saved their members from \$6 to \$12 per thousand feet.

Finally the article from which we are quoting declares: "We have done more for the farmers of this section than any move that has been presented to them, and have every reason to believe the future will bear us out in the above statement."

Drive This Lesson Home

THROUGH all the maze of comment and opinion now filling both editorial and news columns of the public press regarding the war in Europe and its effect on America, the exportation of agricultural products, the higher cost of living at home and the investigations instituted to determine the real causes therefore, we want all our readers to keep clearly in mind a few definite, unassailable facts: The producers and the consumers are being used as pawns in the great chess game of commerce. A comparatively small number of men are controlling, so far as they can be controlled, the life stream of nations. Contracts are being made by foreign nations for food supplies, not between those nations and the producers, but between those nations and the small controlling class. If the farmers of this country were combined in a national organization having its own system of marketing under its own control the present situation would be vastly different from what it is today. Instead of offering sugar refineries 8 cents per pound on contract, the foreign buyers would be making their deals direct with the cane sugar planters of the south and the beet sugar planters of the north and west. Instead of having the great "war food," beans, sold by brokers and contractors, they would be sold by the farmers who grow them, through their organization. Instead of having wheat contracted for export through professional exporters, the foreign buyers would come direct to the real fountain of food supply, the growers and their organization.

It is easy to see the opportunities farmers have let slip away from them in the past because they have been slow to organize. It is painful to see the opportunities of the present follow those of the past because there is no sufficient organization to take advantage of it. Must it always be so? Will not the farmers foresee that the future will also bring its opportunities, and prepare now to utilize them? We believe they will. Organize and federate. Begin today.

Distribution of Harmful Seeds

ONE of the farmers' production difficulties is the miscellaneous distribution of harmful seeds. Weeds are a pest, an enemy requiring constant warfare during the growing season. Some are worse than others and the seeds of some are easily distributed and difficult to detect. This is especially so in grass seed. Some of the farmers' worst weed enemies are in his meadows. If he sells hay the seeds of these weeds go with it. But still worse is it if he threshes the hay and sells the seed. The farmer who buys grass seed to sow is in imminent danger. The seed may be sold him as cleaned and all that, and yet there may remain therein seeds he can scarcely detect with a glass that he would not have in his fields for scarcely any sum of money. Yet he bought and paid for those seeds in buying the grass seed he sowed in his field.

We have in mind now an acquaintance, a careful and progressive farmer, who in the matter of seeds always buys the best. Last winter he sowed "thoroughly cleaned" redtop seed on a thirty-acre field of wheat. The grass came well and showed a fine stand in the spring. But the season's drouth set in in April and continued with unusual heat till late in August. The grass all died, but he finds, since the fatal rains set in, that practically the entire field is set with red sorrel, the worst weed pest in the central United States. He would not have had that field thus set in red sorrel for half the value of the land. Yet he got the seed when he bought the grass seed.

This is a serious question and it is up to the seed-buying farmers, and it is as difficult of solution as it is dangerous in its effects. We have rigid pure food laws and it is claimed that

they are strenuously enforced. Might there not be some such laws concerning the sale of seeds? If a farmer buys seeds that are thus adulterated in a way that is easy to detect he is himself responsible, but in the case of these insidious pests (and they are the very worst pests) whose seeds can scarcely be detected the seller somewhere along the line is the responsible party.

If I Were a Farmer (By Mr. Town D. Weller)

II.

THERE IS one thing I never could quite understand. It's a mystery to me why so many farmers will take such good care of their land and their stock and let the yard right around their house go to rack and ruin. Now, there's that

place we just passed. It's one of the best farms in this part of the country so far as the land is concerned. Its buildings are good too. But the space right around the house is the dumping ground for all the broken-down machinery on the place and most of the odds and ends that either ought to be sold for junk or cut up for kindling wood.

If I were a farmer, I'd work nights and Sundays to fix things up around the house. I'd clean up all the old trash and invest in enough wire fencing to keep the chickens from roosting on the front steps. I'd put in a few flower beds, trim up the lawn, and arrange some place for a hammock for the wife and a swing for the children. In other words, I'd make such a change in the looks of things that people passing on the road would say that it was not only a good farm, but a beautiful home as well.

The farmer might well take a few lessons in this regard from the city man. A man in town usually improves his place because he feels that it enhances its value. A neat little home with an attractive yard is easier to sell than one where the buyer must expect to do the improving himself. I believe that the same holds true in the country. It's all right to say a place will bring only as much as the land is worth, irrespective of the buildings—but other things being equal, the trim, well-kept place is easier to sell and the deal can be made on better terms. But to my mind this isn't of half as much importance as the sense of satisfaction which one gets out of a well-kept place. Then, too, it has always seemed to me that a man who will build a model dairy barn for his cows ought to give at least as much thought to the surroundings of his wife and children.

\$930,000 Per Week Paid for Hudson Cars

Motorists are paying—on the average—\$930,000 weekly for this new HUDSON Six-40. And they have for weeks. We are building and selling 100 cars per day.

They would buy more if we could build them. On one day in September—when car arrivals were heavy—152 HUDSONS were delivered to users.

Five Times Last Year

We are selling five times as many HUDSONS as we sold at this season last year. Think what that means on an old, famous car like the HUDSON—long a leader of the line. Think what a car this must be—this new model Six-40—to multiply HUDSON popularity by five-fold in one year.

Last year's model was 3,000 cars oversold. In July—when this 1915 model appeared—we trebled the factory output. But on August 1 we were 4,000 cars oversold.

Men waited weeks for this HUDSON Six-40 when other cars were plenty. No other car could please them when they once saw this.

The HUDSON Six-40 now outsells any car in the world with a price above \$1,200.

See What Did It

See the car which has made a record unmatched in the annals of this line. You will see a quality car sold at a price which is winning men by the thousands from lower-grade cars. You will see a class car—in many respects the finest

car of the day—sold at one-third what class cars used to cost.

You will see how clever designing and costly materials have saved about 1,000 pounds in weight. Yet never was a car more sturdy. You will see a new-type motor which has reduced fuel cost about 30 per cent.

You will see new beauties, new ideas in equipment, new comforts and conveniences. You will see scores of attractions you never saw before.

They are all in this masterpiece of Howard E. Coffin, the great HUDSON designer. This is his finished ideal of a car, and he is counted the final authority. Mr. Coffin has worked for four years on this model, with 47 other HUDSON engineers. Part by part, every detail of the car has been refined to the limit.

This is the acceptable proven type. This lightness, beauty, economy and price are new-day standards which men are demanding. And this quality—our level best—is the least that men who know will take.

Now is the Time

Now is the time to select your new car. Next year's models are out now. You see what the field can offer. And the best touring months are before you. Don't miss them.

This new HUDSON Six-40 is the car you'll want. And the nearest HUDSON dealer will see that you get it promptly. Hudson dealers are everywhere.

New catalog on request.

October First Feature Article

THE PLEASING EFFECT OF AN OPEN LAWN

HOW PLEASING and refreshing is the sight of the neat and attractive farm home when traveling through a region where nearly all farm houses are dilapidated! We expect to find such a farmer prosperous, and usually we do. He has a nice home and he and all the members of his family put forth an extra effort to keep it attractive. The house is roomy, convenient, attractive and kept freshly painted. The shade trees are trimmed, the lawn is smooth, green and velvety and the plantings of flowers and shrubbery add to the beauty of the place. The women folks are happy and the men enjoy every moment of their leisure time. Why shouldn't success be there?

We have chosen this topic of beautifying the farm home and its surroundings because we believe it to be a business problem and the duty of every farmer to keep the farm surroundings as clean and attractive as he tries to keep his corn field.

A few hundred dollars will add a thousand to the selling value of the place. These late autumn months offer a fine opportunity for grading and rearranging a lawn, hence we shall discuss this topic first and in a later article take up some other problems of improving the place in order to add to its value and increase its natural advantages.

The successful farmer who desires to improve the appearance of his place must study the subject carefully and well. The nearer he comes to being a person with good ideas of art and design, the more successful his work will be.

Whatever your thoughts or ideas of artistic landscape work may be, they

Beauty of Surroundings as an Asset on the Farm

By W. Clement Moore

are pretty apt to find adequate expression in the arrangement which you give to the beautiful grass plots, the winding drive and pathways or to the distribution of your plants and shrubbery when you are laying out your lawn as you wish it to appear. Where Mother Nature has left her footprints in anything like presentable shape or acceptable conditions we must try to let them stay. In fact it will not be well for the ultimate beauty of our lawn if we attempt to be conventional about its lines, curves, angles and general arrangement.

Let us commence with the consideration of the drive which is to lead our visitor up to the door of our abode. If the property is a small one and the front lawn small—say one-eighth to one-half an acre—we should have the entrance at the corner of the lawn nearest to the nearest village or town in order that people coming from that

direction may not need to drive past the house before entering drive. Drives on such places should follow the side of the lawn for about three-quarters of the distance of the house and should then take a curve toward the house across one corner of the lawn and lead after another curve straight by the side entrance of the house. (In some cases where the barns are not properly situated the drive may lead by the front door, but this should be avoided wherever possible.)

With the large lawn the plan for the drive may be upon a much more extended scale. Entering the lawn in much the same manner we can have the drive to follow around the beauty spots (or places where we intend to produce beauty spots) in our lawn, always leading toward the house, but now going part way round an immense shade tree or under the boughs of a

LACK OF SHRUBBERY MAKES A BARREN HOME

sturdy oak, now passing a lovely flower bed and now leading us through a delightful shrubbery or through a breezy grove of trees, and with all presenting to our view at every turn a glimpse of the house or refreshing outlooks across the fields that stretch away in the distance. Such drives as these latter are costly, however, and should not be attempted by the poor man with small capital. On the small property build the straight drive and simply this one feature will compensate you for your trouble.

These drives should be well made and can be well made at very little expense at odd times. It is not necessary to build the whole drive in one day or one week. There are several good ways. If gravel is handy the simplest method would be to skin the ground down about five or six inches (making the drive about sixteen feet wide) and filling in with good gravel and a very slight mixture of good clay to make it hold together and pack well. If you can not get good gravel fill the drive partly with clay and then when it mixes up at the first rain put a good mixture of coarse sand on it. This will make a good, hard drive, but will not wear nor look as well as the gravel. Of course crushed stone and cement may also be used with excellent results.

A good water drain should be built all along the drive, as it will save both the wear of the road and repairs to the outline, at the same time improving the growing ability of your lawn soil. Four to six-inch pipe should answer the purpose. The more level the land the smaller your pipes will need to be.

Top dressing for gravel or clay drive will be necessary once every six or eight years.

A SHADY DRIVE IS A JOY FOREVER

The Hessian Fly and Its Ravages in the Wheat Fields

By J. Troop, Entomologist, Indiana Agricultural Experiment Station

THE HESSIAN FLY is probably the most destructive insect to wheat, rye and barley with which the farmer has to contend. It seems to prefer wheat, but it is not uncommon, during seasons when the fly is abundant, for a large per cent of the rye and barley crops to be destroyed. Oats are seldom if ever attacked by this fly.

As well known, the fly usually goes in cycles of three or four years. This is due, partially at least, to the parasites which attack them, so that we usually have about two years of abundance of flies, when the parasites become abundant enough to kill them off, and then there are several seasons when there are comparatively few, and the injury is so slight that it is scarcely noticed. During these years, the parasites, finding very little upon which to feed, naturally die off and this gives the few remaining flies an opportunity to breed and increase in numbers without molestation until they finally become numerous again.

For the past few years they have not done very serious damage in this state, but it is evident from the large number of letters which have come to this office during the past two months, that the pendulum is now swinging back to-

wards the flies, and while the injury may not have been serious this season, the signs all point towards a maximum crop of flies for next year. It is for this reason that this warning is sent out at this time so that farmers may use every known precaution to protect themselves against its attacks.

Wheat is grown in every county in the state of Indiana. The number of bushels raised in 1911 ranged from 23,000 bushels in Benton, which is a corn county, to 1,031,000 bushels in Posey county; the whole state yielding 34,596,320 bushels. In 1910 the yield was 36,152,022 bushels, or an average of 35,000,000 bushels in round numbers. It is estimated that an average of 10 per cent of the crop is lost annually from the ravage of the fly; this would amount to 3,500,000 bushels which at 75 cents per bushel would make \$2,625,000 as the annual loss to Indiana farmers from this source. It will be more than that this year. It is safe to say that a large part of this loss could be prevented if farmers would give more attention to a better system of farming. Some of the special crop insects, the onion thrips for example, may be held down by spraying, even where 75 or 100 acres are in-

volved, but the Hessian fly is a different proposition and must be outwitted by changing the usual system of raising wheat.

Three things are necessary in waging a successful warfare against the fly, viz: Thorough preparation of the soil, so as to form the best possible conditions for germination; heavy fertilizing, if the soil is not already in good condition, so as to assure a quick and rapid growth; and late sowing, so as to compel the flies to go elsewhere in order to deposit their eggs. I am aware that a number of farmers have said that late sowing has not worked this year; that fields that were sowed as late as October 15 and 18, were badly infested this season, but, we must remember that last fall was exceptional, so far as weather conditions were concerned. There were no killing frosts here at LaFayette until October 21. Farmers were plowing until the first of February; in other words the conditions were very favorable for the late development of the fly. It is safe to say that a great majority of the adult flies are out before September 15, in most parts of Indiana. It takes about two days for the female to lay her eggs, so that wheat sown after the

20th in northern counties, the 25th in the central and the first of October in the southern counties, would be very likely to escape the fall brood, especially if there is much volunteer wheat in the wheat field of the previous season. The spring brood do not usually migrate to other fields in order to find places to deposit eggs, as there are plenty of wheat plants close at hand, but a hard windstorm at the time they are laying their eggs might and often does blow them considerable distances and might land them in fields that have been hitherto uninfested. This fact may account, in part at least, for the late-sowed fields being infested this season.

It has been said that not 1 per cent of the farmers of Indiana can recognize the adult fly, and that is probably true, because unless one takes the trouble to breed them out in cages, they are seldom seen. A miniature mosquito is a good short description of the adult fly, which is only about one-tenth of an inch long, dark color, slender legs and with only one pair of wings. At the present time they are in the "flax-seed" stage in the wheat stubble, and if the field was not seeded to grass or clover last spring, they may be destroyed by burning the stubble. If this is not advisable, then the late sowing as stated above is recommended.

Our Country Contributors

NOTICE TO READERS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures are desired. Cash will be paid for all articles used as follows: \$3.00 for the best article; \$2.00 for the second, and \$1.00 for the third best. All others, 50 cents each.

HOW WE CAME TO BE FARMERS

(Awarded First Prize of \$3.00)

IT IS THE old, old story. Husband's health failed, he lost his situation, we were getting in debt, and there were three children to feed, clothe and educate. We sold our little home in the village, settled our debts and had \$1,400 left. We made a first payment of \$600 on ten acres of river bottom land, leaving a mortgage of \$1,200 to run 10 years at 6 per cent. There was a small cottage and a few sod and log outbuildings on the place. We had to sell part of our furniture, as the cottage was too small to hold it all. From this sale we realized \$170. We moved in our new home in November. We purchased two good cows at \$65 each and I learned to make butter, cottage cheese, etc., and sold it in the village at good prices. We had always kept a few chickens in town so knew something about caring for them. We had 10 good hens and bought 50 more at 50 cents each. We fed bone meal, meat scraps, ground clover and cracked corn and our hens laid all winter and I sold at the rate of 16 dozen eggs per week at 20, 25 and 28 cents per dozen. We raised on the average or six hogs each year, a few turkeys, ducks, pigeons and geese. I sold eggs for hatching from turkeys, ducks and geese at \$1.50 and \$2.00 per setting. Husband bought a team for \$260, a light wagon, plow, harness, a few garden tools, etc., second-hand, and paid \$77 for them. In the spring our cows each calved and when two months old we sold the calves at \$12 each. My husband was regaining his health gradually and we went in for truck gardening and poultry raising. We also bought several stands of bees and sold \$125 worth of honey in the comb the first year. Melons, carrots, cabbage, cukes, sweet corn, lettuce, string beans, onions, radishes, etc., were raised in abundance.

The first year we paid off nearly \$300 on the mortgage, not counting the interest. We set out one acre in asparagus and the second year planted two acres of onions. An old orchard and a small berry patch kept us in fruit and gave us a little to sell. I made fancy cakes of dutch cheese and sold them at 15 cents per pound. In four years our place was clear of indebtedness, our asparagus bed was in full bearing. We were milking three cows, owned a good team, 600 head of poultry and we now deliver our produce in a small motor truck. Best of all, my husband is entirely well and we are all happy. Our average income is \$1,800 per year.—G. S., Iowa.

WHY NOT HAVE A FARMERS' CLUB IN YOUR TOWN?

(Awarded Second Prize of \$2.00)

TIME WAS when farmers planted out their crops any old way. They merely tickled the top soil and trusted to Providence and the signs of the "Zodiac" for results. But those good old days have passed. Farming is now a science that requires hard, close study. It seems to me the farmer's greatest need is to get in closer touch with each other. Recently, we witnessed an example of isolation among neighbors which meant a heavy financial loss.

After the summer rush of work was over, Farmer C. concluded to do some much-needed roofing. The dwelling, barns and outbuildings all needed roofing. He had formerly been buying his roofing supplies from the local hardware man. But by mere chance he happened to read the announcement that UP-TO-DATE FARMING stands back of their advertisers with a guarantee (this farmer had not been in

the habit of reading ads), so he began looking over the advertising matter and became interested in a certain roofing ad. and sent for samples, and as a result ordered his roofing direct from the factory at a big saving.

There were many of his neighbors who also were preparing to put on new roofing. They bought, as usual, from the local dealer. All those farmers are working, studying and striving for

the best in farm life, but it seems that they have no time for visiting each other and thus getting an exchange of ideas. They could have made this roofing proposition a community affair and secured their supplies much cheaper by ordering all the material from one firm.

What we are trying to say is this: If those farmers were banded together in a community club, it would not only make life on the farm much more worth while, but it also would save them many dollars in their necessary expenditures. We will say that if there are twelve farmers in a neighborhood who have the spirit of progress, they can organize and arrange to meet once a week, on Wednesday or Thursday evenings.

They could discuss better farming, business questions and buying and selling. The women would find plenty of interesting subjects to engage their time and altogether this mingling of people and plans and having heart to heart talks would banish the monotony on the farm to a large extent. Children can furnish the entertainment and their own lives be made brighter. Such a club would be furnished the best of farm literature by the federal and state agricultural departments. The boys and girls will become interested in this club and "wanderlust" will not develop in so many of them. Anyway, this is what one old "hayseed" thinks about the matter, and he would be mighty well pleased to hear from others of UP-TO-DATE FARMING's great family of readers upon the subject.—J. W. Ray, Olive Hill, Ky.

PROFIT IN WATERMELONS

(Awarded Third Prize of \$1.00)

LAST SPRING I plowed a small plot of ground very deep and let it lay about a month then rebroke and harrowed thoroughly. May first I again rebroke and harrowed and marked the rows off six by eight feet, put about 15 pounds of stable manure in each hill, covering it with about four inches of dirt. I planted the melon seeds eight or ten in a hill to insure a stand, covering the seed about an inch deep with loose dirt. Then to prevent the ravage of the bugs I sprinkled about a teaspoonful of table salt over each hill when planted. Some use canvas-covered boxes, but I find salt a sure preventative and less expense.

After the young plants were well up I thinned to three in a hill and worked them thoroughly, not allowing a weed to grow in the patch, thoroughly cultivating all the middles at each working and when the vines began to run I planted a row of corn and beans between each row of melons, drilling them in very close in the row, which helped the melons by furnishing a shade for them through the hot weather and in no way hindering their growth, as I have raised plenty of them weighing thirty pounds and more.

I now have a fine patch of late corn and beans which will more than pay all expenses of cultivation. I have not kept an accurate record of sales, but the profit has been more than \$200 an acre. All the cultivation I had to give the corn was with the hoe, as the vines covered the ground. I find the best varieties for this latitude are Georgia Rattlesnake and Mountain Sweet.

Anyone wanting a prize melon can get it by placing a can of water near the melon, put one end of a yarn string through the stem, the other end in the water, keep the can refilled with fresh water, and they will grow to an enormous size.

Light, sandy land is preferable for melons because it is so much easier to cultivate, but they will grow anywhere in this climate with proper cultivation.—Noah P. Grear, Index, Ky.

Satisfaction or Your Money Back

The up-to-date merchant and manufacturer sell to their customers on the principle of "satisfaction or your money back." You can deal direct with advertisers in UP-TO-DATE FARMING on the same basis, because we guarantee them. If you see what you want advertised in UP-TO-DATE, write the advertiser; if you don't see it, write us and we will help you.

Our Advertisers Are Guaranteed

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

All-Weather Treads

Should be on Every Fall Tire

Here is a tread which—when you know it—you will adopt for all wheels at all seasons. In fall and winter it's particularly essential.

It is an exclusive Goodyear feature. The tread is tough and double-thick. That makes it enduring and difficult to puncture.

It is flat and regular, so it runs like a plain tread. It causes no vibration. Yet it grasps wet roads with deep, sharp, resistless grips.

In these important ways no other anti-skid on the market compares with this Goodyear All-Weather tread.

Other Things That Go With It

Here are three other features—all exclusive to Goodyears—which you get in No-Rim-Cut tires:

Our No-Rim-Cut feature, which we control. It completely wipes out rim cutting.

Our "On-Air" cure to save blow-outs. We alone employ that, at an extra cost of \$1.500 daily.

Our patent method for combating loose treads. It reduces this danger by 60 per cent.

Goodyears are more than quality tires—more than the utmost in fabric and formula. In addition to that they combat your four chief tire troubles in these four exclusive ways.

That's why more men buy them than buy any other tire. And legions of new users now adopt them every month. You will always insist on them when you know their advantages, and any dealer will supply you.

THE FARM *and* ITS PROBLEMS

of Producing and Marketing

AUTUMN BEST TIME TO SELECT SEED CORN

AUTUMN IS the time to prepare for a profitable corn crop the following season. At this time the seed is most abundant and the very best can be obtained before it has been in any way reduced in vitality. Many let the opportunity pass, expecting to purchase their seed corn in the spring, but the Department of Agriculture's specialist in charge of corn investigation advises that the autumn is the best time to select good seed.

The best place for the farmer to obtain seed corn is from fields on his own farm, or in his neighborhood, that were planted with a variety which has generally proved most successful in that locality. Of course, if a community has an experienced and honest corn breeder on whom it may rely, the seed corn may be obtained from him.

The corn breeder who has demonstrated year after year the superiority of his corn will demand a special price for his superior seed. Such corn breeders are improving corn as cattle breeders have improved cattle. He has used special methods that farmers generally have not time to apply. Five dollars a bushel is not too much to pay and will be a profitable bargain for both parties.

What Constitutes Good Seed Corn

By far too many consider seed good simply because it will grow. To be first class seed must be—

- (1) Well adapted to the seasonal and soil conditions where it is to be planted.
- (2) Grown on productive plants of a productive variety.
- (3) Well matured, and preserved from ripening time in a manner that will retain its full vigor.

The importance of the three requirements just enumerated has been demonstrated experimentally by the Department's Office of Corn Investigations. The results given briefly, as enumerated, are as follows:

(1) For a series of five years, 12 well-bred varieties were tested in ten northern states, equivalent lots of seed being used in each state. Varieties that produced more in some states were among the poorest in others.

(2) Seed ears taken from the highest yielding rows of ear-to-row breeding plants has repeatedly produced better than seed ears taken from poorer yielding rows. Seed ears from the best producing stalks found in a general field, produced more than seed ears taken without considering the productiveness of the parent stalks.

(3) Four bushels of ears were divided into two equal parts, one part being well taken care of and the other placed in a barn, as corn is ordinarily cribbed. The well-preserved seed gave a yield on poor soil 12 per cent higher than the poorly preserved, and 27 per cent higher on fertile soil, notwithstanding the fact that both lots of seed germinated equally well.

Seed Corn Gathering Should Be Special Task

At corn-ripening time drop all other business and select an abundance of seed corn. The process is too important to be conducted incidentally while husking. When selecting seed corn give the process your entire attention. Get the very best that is to be had and preserve it well, and your increased yields will return you more profit than any other work you can do on your farm.

The only proper way to select seed corn is from the stalks standing where they grew, as soon as ripe and before the first hard freeze.

As soon as the crop ripens go to the field with seed-picking bags and husk

THE TYPE OF SEED EAR EVERY FARMER SHOULD SELECT

the ears from the stalks that have produced the best corn without having any special advantages, such as space, moisture or fertility. Avoid the large ears on stalks standing singly with an unusual amount of space around them. Preference should be given the plants that have produced most heavily in competition with a full stand of less productive plants.

In all localities the inherent tendency of the plant to produce heavily of sound, dry shelled corn is of most importance.

Late-maturing plants with ears that are heavy because of an excessive amount of sap should be ignored. Sap-piness greatly increases the weight and is likely to destroy the quality. In many sections this fact is not sufficiently appreciated.

In the central and southern states, all other things being equal, short, thick stalks are preferable. Short stalks are not so easily blown down and permit thicker planting. Thick stalks are not so easily broken down and in general are more productive than slender ones.

The tendency for corn to produce suckers is hereditary. Other things being equal, seeds should be taken from stalks that have no suckers.

The same day seed corn is gathered the husked ears should be put in a dry place where there is free circulation of air, and placed in such a manner that the ears do not touch each other. Good seed is often ruined because it is thought dry enough when gathered and the precaution mentioned is considered unnecessary. Many farmers believe that their autumns are so dry that such care is superfluous. Seed corn in every locality gathered at ripening time will be benefited by drying as suggested. If left in the husk long after ripening it may sprout or mildew during warm, wet weather, or become infested with weevils.

The vitality of seed is often reduced

Fair Play in Telephone Rates

IT is human nature to resent paying more than anyone else and to demand cheap telephone service regardless of the cost of providing it.

But service at a uniform rate wouldn't be cheap.

It would simply mean that those making a few calls a day were paying for the service of the merchant or corporation handling hundreds of calls.

That wouldn't be fair, would it? No more so than that you should pay the same charge for a quart of milk as another pays for a gallon.

To be of the greatest usefulness, the telephone should reach every home, office and business place. To put it there, rates must be so graded that every person may have the kind of service he requires, at a rate he can easily afford.

Abroad, uniform rates have

been tried by the government-owned systems and have so restricted the use of the telephone that it is of small value.

The great majority of Bell subscribers actually pay less than the average rate. There are a few who use the telephone in their business for their profit who pay according to their use, establishing an average rate higher than that paid by the majority of the subscribers.

To make a uniform rate would be increasing the price to the many for the benefit of the few.

All may have the service they require, at a price which is fair and reasonable for the use each makes of the telephone.

These are reasons why the United States has the cheapest and most efficient service and the largest number of telephones in the world.

GOOD SEED PRODUCES VIGOROUS SPROUTS

by leaving it in a sack or in a pile for even a day after gathering. During warm weather, with some moisture in the cobs and kernels, the ears heat or mildew in a remarkably short time.

The Department of Agriculture has a bulletin that gives in detail the best manner of treatment for corn after it is gathered. The bulletin also describes how seed corn should be stored during the winter and tests of the germination of seed corn. The bulletin may be had free by those who request Farmers' Bulletin No. 415, on "Seed Corn," from the Department's Division of Publications, Washington, D. C.

Turn About

Doctor—What do you think of this shoe, Hans? Does it need mending?

Shoemaker—No, doctor, it is all right. It don't need a thing done to it.

Doctor—All right, Hans. Hand it back to me.

Hans—But you owe me feefty cents alretty.

Doctor—How is that? You didn't do a thing to the shoe.

Hans—That's so, doctor, but ven I comes to ask how vell I vas, and you tells me notings is de matter mit me, you charge me tree dollars for telling me dot.

Didn't Need Curing

"Do you wish cured meat?" asked the market man of the newlywed who had never kept house before.

"No, I want meat that's never been sick," was the reply.

Repairing Building Supports and Foundations with Concrete

A COMMON source of annoyance and expense on the farm is the decay or giving way of building supports and foundations. When this occurs, it is considerable trouble to replace these with new timber or ordinary masonry. It frequently happens that a building is in first-class condition while its supports have disintegrated or collapsed. For making repairs of this kind concrete surpasses any other material. This is due to the fact that it is a plastic substance and may be moulded or poured into recesses not readily accessible when other material is used. Timber supports may be made without jacking

foundation and set in place the forms for the concrete. In the case of small buildings it is usually feasible to raise them high enough to allow working room, in which case the form may be filled right up to the top with concrete. The concrete should be a wet mixture, consisting of 1 part Portland cement, 4 parts sand and 4 parts stone.

Should the building be too large and heavy to be raised to a height that will give head room, merely make the foundations 3 inches wider than the sill. Then when the forms are carried to the desired height the concrete may be inserted through this extra space of 3 inches. To facilitate the placing of the first layers of concrete, the top board

of the forms may be left off until ready to place in the last of the concrete. This last batch should be very wet the concrete should be tamped until it comes up flush to the bottom of the sill and to the entire width of the wall.

Make certain that a space is left in the concrete wall under and on the sides of the underpinning support so that the building may be lowered onto the new foundation and the timber removed. This opening, of course, must be slightly larger than the underpinning support. The building should not be lowered until the foundation has been in place two weeks, and after this is done the openings occupied by the underpinning may be filled with concrete.

A fact for the curious. A piece of land six feet square, sown to wheat that will yield at the rate of twenty bushels to the acre, will produce flour enough to make a pound loaf of bread.

Now that marketing by parcel post is becoming a feature of farming, the farmer must also become an expert advertiser. For all-around business qualifications farming is about as exacting a profession as the most ambitious could desire.

Next year's wheat crop depends much upon quality of seed and condition of the seed bed. Don't let any possible failure be laid at your door. Do your part, and thus put results right up to the weather man.

BARN FOUNDATION SUPPORTS OF CONCRETE

up the building beyond its original elevation.

For example, let it be assumed that a building is resting upon wooden or timber supports which have decayed at the ground level, which always occurs when timber is subjected to alternate wetting and drying. It is an exceedingly simple matter to remedy a situation of this kind with concrete. One has merely to support the building with temporary struts, which should be placed near the post to be removed. The old post should be then sawed off entirely above the rotten part, the suspended part consisting of sound timber. Directly under this suspended post dig a hole two feet deep and slightly larger than the post itself. Fill the hole with a mixture of concrete, consisting of one part Portland cement, two parts sand and four parts stone. On to of this place a box with open ends, its inside measurement conforming to the dimensions of the hole. This box should be made and ready to use before any concrete is mixed or placed. Its length should be sufficient to reach from ground to a few inches above the bottom of the sawed-off support. When in position fill it with concrete until the bottom of the sawed-off post is imbedded about a half inch in the concrete. Proceed as above with each support, leaving the boxes or forms in place for one week, and after two weeks the struts used as temporary support for the building may be removed. The concrete should be mixed thoroughly wet and tamped or puddled with a stick while being placed.

In the case of larger buildings elevated quite a distance above the ground the new support or foundation may be made larger at the bottom than at the top by sloping one side of the box form, as shown in the illustration.

To Replace a Continuous Foundation With Concrete

This can be done by the farmer with the help of his farm-hands, even where buildings are quite large and the foundation is of the continuous type, requiring jacking up of the structure.

At necessary points remove a few heavy stones or bricks, as the case may be, and insert short pieces of heavy timber to wedge up the building. The building should be carefully raised by this means until entirely freed from all foundation. Then remove all of the old

The Only Car In This Class Ever Built Like This

Reo the Fifth is unique in its costly construction, in its margins of safety, in the extremes used to make it enduring. Mr. R. E. Olds designed it. It is built in a model factory. Six weeks are spent on each car. And men with Mr. Olds' ideals watch every detail of it. It is bought by men who buy cars to keep, and who want those cars to stay new.

In outer ways—in the parts you see—Reo the Fifth is simply up-to-date. It has all the new beauty, the equipment, the luxury you expect in fine cars today.

But the hidden parts are exceptional. They are costly and exact. They are built of steels made to formula. They are given most radical tests.

Test cars are run for 10,000 miles to prove how sturdy each part must be to stand what a car must meet.

The engine is 35-horsepower. But all tests applied to vital parts are for 50-horsepower requirements.

We use 190 drop forgings, 15 roller bearings. We have the only one-rod control—a light handle which does all the gear shifting. To prevent gear clashing, with all its strains, we employ a most costly clutch.

We spend on each car about \$200 more than we need to spend. It is spent to save trouble, upkeep and repairs—to insure years of perfect service.

Not Too Good

Men used to say that this car was too good—built in ways too costly, too extreme. But 35,000 men have since bought it, and they proved

it enduring. Now the demand for this car, nearly every month, exceeds our output by far. Yet this year our capacity was increased 40 per cent.

More and more, men are learning that it pays to buy a car like this.

New Things

Our latest model shows many new features. In the past year, 18 have been added. The price today—with full equipment—is \$220 less than it used to be. That has been saved by new machinery, by larger output and factory efficiency. No price reason now forbids you to have the best-built car in its class. And the more you know about motor cars the more you will demand it.

Sold by 1155 dealers. Ask for Reo Magazine, showing how this car is built, and we will tell you where to see it.

How Hog Cholera is Being Combated

THE DEPARTMENT of Agriculture, during the past year, has been conducting campaigns in Indiana, Missouri, Iowa and Nebraska to control hog cholera by means of anti hog-cholera serum and farm quarantines. In one county (Pettis county, Missouri), where there was a loss of 18 per cent in 1911 and 25.6 per cent in 1912 of all hogs raised, there was only a loss of 14.7 per cent up to November, 1913. The decrease is believed by the department to be due to the use of the serum, which, although not used there by the Department's agents until August, 1913, materially reduced the loss. About 60,000 hogs were raised during the past year and of the 10,000 that died of hog cholera, only about 1,000 were

lost after the active use of serum and quarantine measures were inaugurated.

In every county where these measures were employed, even though begun after the disease had continued its ravages for some time, there was less loss from hog cholera than in either of the two preceding years.

In addition to its great function as a preventative, it has been found that the anti hog-cholera serum would cure a large proportion of hogs in the early stages of the disease and render them

renew of Animal Industry of the Department and the inoculation of diseased herds and exposed herds with the anti hog-cholera serum.

A county in each state was selected as a unit and the method of work in that county was, briefly, for the State College to secure the co-operation of intelligent, active farmers in each township and county. These men were called volunteer assistants and they were to keep in close communication with the Department's instructor stationed in that area keeping him informed of conditions and securing statistics concerning the hog industry.

winter months. For one thing, there is more time for giving proper attention to milking and handling milk. Also dairy products bring better prices in winter.

Butter fat is too valuable to feed to hogs. The old skimming system leaves a lot of butter fat in the milk. The separator removes all of it. It pays to use a separator.

Dairy cows should be fed all the roughage they will eat up clean. They should be fed as much other feed as they will consume without taking on weight.

Much of the success of a dairy herd, large or small, lies in the proper raising of the heifer calves from the best cows.

Whenever possible, one should begin feeding from the silo as soon as it is filled. When this is done there should be no loss from spoiling.

Dairy cattle that are being fitted for the show ring should be blanketed to put hair and hide in best condition.

A good milking stool that can be easily made is one with one leg, made with straps to fasten about the waist and hold the seat in place. This is sanitary, comfortable and convenient.

It Depended on the Time

"Did you say your husband likes those new style clinging gowns?"

"Yes, if they cling long enough, say two or three years."

Turn About as People See It

O.I.C.
SOW WEIGHED 932 LBS.
AT 23 MONTHS OLD

IONIA GIRL

I have started more breeders on the road to success than any man living. I have the largest and finest herd in the U. S. Every one an early developer, ready for the market at six months old. I want to place one hog in each community to advertise my herd. Write for my plan, "How to Make Money from Hogs." C. S. BENJAMIN, 26 St. Bk Portland, Mich.

SUNLIT QUARTERS HELPS PREVENT CHOLERA INFECTION

immune after recovery. However, if hogs are not treated by this serum, from 75 to 100 per cent of all affected herds die.

Of hogs actually sick when treated, the Department's inspectors lost but 25 per cent during the past summer. Of well hogs in diseased herds, 2.8 per cent died after being treated, and of hogs in exposed herds less than 1 per cent died after being inoculated with the serum. In an infected herd there is always a certain proportion of hogs that are well.

The inspector examines the hogs when he arrives, takes the temperature of all hogs in the herd and separates the sick from the well. The temperature is an indication of the sickness. The temperature of a sick hog, unless the hog is near death, will run above 104 degrees, and sometimes as high as 107 or 108 degrees F.

Some states are engaged in the manufacture of serum to cure this disease. The serum requires special treatment to preserve its quality and a qualified man to produce it. Sufficient serum to treat an average hundred pound hog costs about thirty cents, at a liberal estimate. The treatment is by hypodermic injection.

The Department in initiating its campaign against the devastating hog disease has only been able to commence in a few of the districts where the cholera was the most widespread and where the active co-operation of the state was offered in enforcing the ordinary quarantine measures, etc.

The object of the Department has been to endeavor to control the disease and if possible, to eliminate it from the country. To secure this end the best efforts of the farmer himself are necessary. The campaign against this devastating sickness during 1913 was planned in the territory selected along three lines.

1. The education and organization of the farmers in the districts selected, to be carried out primarily by the State College.
2. The enforcement of sanitation and restrictive regulations by the state veterinarian.
3. Active supervision by the Bu-

reau of Animal Industry of the Department and the inoculation of diseased herds and exposed herds with the anti hog-cholera serum.

In this manner conditions were pretty well learned in the territory under inspection. When an outbreak of hog cholera was reported the Department's inspector went to that outbreak and saved all the hogs he could by treatment with serum. As the disease, is very easily transmitted, he then protected all herds in the immediate vicinity by inoculation. The idea was to form a zone of immune animals around the infected center.

Hog cholera does not seem to affect any particular breed of hogs more than another, and while generally the careless farmer is more apt to have the disease among his hogs than the careful one, the disease sometimes occurs where the conditions are sanitary. It is hoped that the work may be extended gradually until the disease is completely controlled or eliminated. The fact that hog cholera is carried not only by the hogs themselves, but by birds, dogs, streams and even on the feed of men going from one farm to another shows how necessary it is that the campaign be thorough and that farmers exert their best efforts to assist in the work.

Dairy Notes

The profitable cow is one that makes good use of large quantities of food. Don't stint your cows.

In selecting breeding stock, the records of the near ancestors are the ones to be studied most closely. The more remote the ancestor the less its influence on the individual.

Hang a spring scale in a convenient place where milk can be easily weighed and mark down weight of each milking on a chart prepared for the purpose.

Do not mix warm cream with cold cream, as the warm cream will quickly sour the cream that has stood for a day or more.

There are many advantages in having cows freshen in the fall or early

FEEDING HAY TO HENS

(By Archie E. Vandervort, Sidney Centre, N. Y.)

EDITOR'S NOTE: The farmer, or his wife who makes any effort whatever to make the farm poultry pay, will find that the following suggestive thoughts of Mr. Vandervort can be most profitably applied. Clip now a few hundred pounds of clover or alfalfa, cure it bright, and store it where it will retain its color, and not mould or become musty, and it will not only be inexpensive food for the birds during winter months, but it will produce really wonderful re-

sults, not only directly from the birds fed, but the good effects will last through the summer, and show surprisingly in the health and vigor of next season's chicks.

HT HAS not been many years since the time when if a man had proposed feeding hay to his hens he would have been considered a mild sort of a lunatic, and yet now thousands of tons of hay are fed to the poultry flocks of this country every year, and each year the practice becomes more common.

From the earliest times poultry keepers have noticed that a flock of hens having access to green feed would lay better than those deprived of this kind of feed, but it took several centuries for poultrymen to learn that they could feed green vegetables in winter with profit, and still longer to learn that hay made an excellent winter feed for laying hens and for other poultry.

A few years ago the poultry publications began to print articles concerning the value of green food for fowls, and particularly recommended lawn clippings and tender grass which had been cut and carefully dried in the shade and stored away for winter use. This was tried by a great many and found to be excellent, but not every poultry keeper is so situated that he can get lawn clippings during the summer, and others cannot secure other green vegetable feeds without great expense.

The American poultryman does not sit down and give up over small trifles that oppose him. Once the green food idea possessed him, he began to notice that hens greedily ate the broken fragments of hay that had become scattered about in feeding his livestock, even the broken corn blades being eaten with evident relish.

Then came a genius with the idea that clover hay might be cut into pieces short enough to admit being swallowed by a hen, and cut clover at once became a favorite feed for winter as a substitute for grass and other green feeds. Later a further step was taken, and clover hay was ground into a meal to be used as the component part of a warm mash, and it has made very good feed.

In the meantime alfalfa was beginning to make friends for itself in the west and southwest and further east wherever it would grow. It was found to be far superior to clover for live stock, and analysis at the agricultural experiment stations showed why. It was found to be richer in protein, the substance which is a component of the whites of eggs, and that element of feeds which makes lean meat, than any other forage crop.

Dry alfalfa hay was found to contain more than one-third more protein than wheat bran, which had been before this time considered one of the standard protein feeds. If alfalfa was good for live stock and dairy cows, why not feed it to poultry? Clover meal was by this time being used in large quantities, and alfalfa meal was tried. It was found to be really a great feed for laying hens and growing chicks. The best alfalfa meal, when slightly moistened, turns a vivid green, and the odor from it is exactly like that of new-mown hay. All kinds of poultry eat it greedily, and when fed growing chicks it gives them strong, vigorous muscles and large, hard, fine bones.

Recently I was talking with a very prominent and successful poultry man, and we got to talking about eggs and egg foods. "I never had my hens lay so well at this time of the year," he said. "I began feeding alfalfa meal a few days ago, and since that time we have been getting eggs by the basket. It think it is the best single feed for laying hens I ever used."

So valuable a food is it considered by those who make poultry foods that a number of our best egg rations have

alfalfa meal as a base instead of oil meal. A combination of alfalfa meal, beef scraps, ground bone and a few other ingredients of minor importance make the best feed for chicks that can be secured. As most of our egg foods contain these ingredients, it follows that they must be valuable for the purpose for which they were compounded. With alfalfa meal the poultryman need not hesitate about keeping his laying hens confined the year round, if necessary, for the meal is fully as valuable in maintaining health and productiveness as the best natural grass.

EVERYBODY CAN CANDLE EGGS

To enable farmers and housewives to test eggs before a candle and tell accurately their condition before they are opened, the Department of Agriculture has just published a colored egg-candling chart. To give a true picture of the eggs twelve impressions were necessary to produce this lithographed chart.

This chart shows the eggs in their natural size as they appear before a candle and also as they look when open in a glass saucer. The pictures include an absolutely fresh egg, slightly stale eggs, decidedly stale eggs, eggs

A PRIZE WINNING WHITE LEGHORN

with yolks sticking to the shell, eggs where the chicken has developed so far that blood has been formed, moldy eggs, addled eggs and eggs with a green white.

Comparatively few housewives are aware that a green color in the white of eggs is due to the presence of billions and billions of a certain species of bacteria that make a green coloring matter. Eggs with this greenish tint, even though the yolks seem to be perfect, are not fit for food.

As long as the Department's supply lasts these charts will be furnished free upon application to the editor and chief, division of publications. Commercial shippers of eggs, however, should apply for Departmental Bulletin 51, a technical paper on testing by scientific methods not available to the average farmer. This bulletin includes the colored illustrations. This chart alone will be found to be not merely of great service to the housewife wishing to test the eggs she is to serve to her own family, but also of commercial value to farmers, country merchants or egg shippers who wish to buy and handle eggs on an accurate quality basis.

TIMELY NOTES

October

This is the month when your pullets should show a red comb, increase in size, and other signs of commencing to lay. That is, if your birds have been properly developed. It takes about six weeks of proper feeding to prepare a pullet for winter work, and unless animal food or fresh green bone has been given them, your pullets will not commence to lay until January or February. If fresh cut green bone

has been fed, your pullet can be made to produce 200 eggs during the coming year. Next season she will not lay to exceed 150 eggs, but by proper feeding she will continue to lay during moult. It is well to keep a number of yearling hens to provide eggs during summer, and it is a positive necessity that the best of your last year's pullets be preserved for your breeding stock. Never breed from a pullet unless positively necessary, and then only in case the pullet is fully matured and well marked. The shape and size of the pullet is also of vital importance.

Helpful Hints for Homefolks

KEEPING AFTER THINGS

(By T. E.)

IF YOU'RE going to run your housework instead of your work's running you," said an old housekeeper once, "you've got to keep after things all the time."

Sooth to say, it seems to me, than that I was keeping after things all the time—only a long way behind the procession. I worked a good deal harder than I need have done, and yet, my house did not show it. It was only with years of hard experience that I learned to some extent what "keeping after things" means, and for the benefit of other young housekeepers, I will pass on some concrete examples of what I mean.

"Keeping after things" implies putting a certain portion of your house in order, and then trying to keep it so. There was a time when the mantels and window sills in my house, the tops of bureaus and the like appeared to have an uncanny way of accumulating all sorts of things which did not belong there. I grimly set myself to clean off these places once for all and then keep them cleaned off. It was hard work while the habit was forming; now it is second nature, and by doing this I save the disordered look and the trouble of cleaning them off on the occasions when the whole apartment is put in order.

We take a number of papers and the reading table was always untidy with them until I formed a habit of clean-

ing off all but the latest numbers every week, saving the ones I wished to preserve in boxes in the garret, and putting the rest in a barrel for waste paper. You would be surprised to know how much untidiness this one item means.

Mending is another sort of work which is apt to get behind. I make a desperate effort never to leave garments over from one week to the next, especially hose. It is a dreadful job to mend ten or a dozen pairs of stockings which need it badly, but if they are kept up promptly you don't mind it so much. When the winter underwear is discarded in the spring, make it your business to mend them before putting away for the summer, and do it at your earliest chance, too. You feel the good of it in the fall; the same is true of summer things.

There is in our house a small spare bedroom where the best clothing of the family is kept. The bed in that room was the worst offender I had in the house. It was always strewn with garments that had been hastily thrown there when the family returned from some outing and had not hung them up again. Now I set my teeth and vow that bed shall be clear. If too hurried to attend to it as soon as we return, I do it the first thing next day. As a result I am no longer mortified by having that door left open when chance callers come in, revealing the chaos within.

The washing, in a family with children in it, is necessarily large, but a

little forethought and planning will save tremendous washings on Monday.

Plan so that when you wish to wash "extras" they may not all come one week. This is especially true when you are washing the winter bedding before putting it away, and when you are doing draperies, spreads and the like. It is a good idea to wash out in midweek a few things for the children, and it is surprising what a help it is. When there is a baby, it is easier as well as better, to wash the napkins every day. Thus you always have a good supply and avoid the unpleasantness of doing out a large number, and having them soiled in the house. It is possible to have your washings of comparatively uniform size if you only plan for it.

Most people dread to think of their closets and cupboards, but if they planned to take one per week, they would soon have them all in order, and in condition to be easily kept so. The same is true of the windows, the pantry shelves, the cellar-way and other such places. If you plan to let no week pass without doing something along these lines, even if it be but a little, you can keep ahead of the game.

The great thing is to clean up, stop scattering in so far as possible; try to keep others from doing so, and then keep going over it often enough to keep things neat. This was what my friend meant, and I have found that her advice was good.

HEALTHY, NOISY CHILDHOOD

By Maximilian P. E. Groszmann, Ph.D.

IT IS INTERESTING to note the results of careful investigations into the causes of dullness and precocity in children. Precocious children are, as a rule, heavier, and dull children lighter, than the average child of the same age. Precocious children are taller and have larger chests and wider heads than backward children. No child whose weight is below the normal standard for his age should be permitted to enter a high school grade that the average child of his age attends, except after such a physical examination as shall satisfy the physician that the child's strength will be equal to the strain. Here the connection between physical and mental conditions is very plain. Physical weakness often produces an abnormal mental state. In illness or convalescence, or when suffering from hunger and fatigue, most of us are more irritable than when we have our full strength. Selfishness, untruthfulness, ill-temper and the like very frequently have a pathological basis. This is so characteristically true that we may in most cases consider moral aberrations as conclusive evidence of some sudden moral discrepancy. Do not run for the rod, but for the physician; but be careful what you call a "moral discrepancy." In nine cases out of ten the so-called naughty child is only a normal child and the fault lies not with him, but with you who do not understand him, says the Mother's Magazine. The healthy child is usually active, noisy and boisterous. Beware of the quiet child who is so often praised and petted. Remember, refinement and self-control must not be forced before their time. There are normally quiet children, to be sure, but the majority of quiet children are more or less abnormal. They are either dull, painfully precocious, diseased, fatigued or bored. Do not try to hasten your child's development; do not give him a hothouse culture; do not drive him; do not suppress his natural instincts. Be thankful, instead, for your noisy, healthy little savage.

MOTHER'S DUTIES

AMONG the puzzling things in a mother's life are the various and varied duties confronting her; duties to her Maker, to herself, to her husband and family, to her neighbors, to her servants, to her community and to her state. Multifarious as they are, they do not conflict. They work together like the cogs of heavy machinery.

Her task it is to see that her vision is unclouded, that her good sense instead of her wild emotions controls, for upon her notions of duty and her faithfulness in obeying them, depend momentous consequences. Mothers are notably conscientious and faithful, and always will be, so long as motherhood and childhood exist. Yet it will do no harm, and some possible good, to remind ourselves afresh of some of the duties to childhood.

The first thing that can be done for the child is to provide a good inheritance, mental, moral and physical, says The Mother's Magazine. Without a good physique with poise and steady nerves, there are apt to be lapses in mentality and morality. It is also true that a defective mentality or a low morality lessens the other two. A stable, capable life structure needs an abundance of all three. Any inheritance short of this, handicaps the child.

But nursing, nurture and shelter are the least that the child demands. The next set of duties toward him pertain to his mental growth, to his education and training. Though the individual child may not realize it, and may not eagerly accept it, his is the right to have the teaching, the culture and the training which will fit him for usefulness in society. Then there are those duties that develop the ethical and

Louise over 2 ft. tall and Susie and Jimmie

Pay no attention to other offers. My offer is the best

Louise can wear a real live baby's clothes

Over 2 feet tall

3 big dolls given away

Girls, if you want 3 of the cutest dolls you ever saw send for this doll family. Louise is over 2 ft. tall, very like a real youngster in size. She can wear a real baby's clothes. She will sit or stand. Brother Jimmie is a husky fellow and Sister Susie is out for anything. JIMMIE AND SUSIE ARE FULLY DRESSED and you will be delighted with all three dolls.

I want to give this doll family to a little girl or boy in each home. The only condition is that you secure a new 6-months subscriber at 25c to Up-to-Date Farming. It is published twice a month, 12 issues in 6 months. Send 25 cents and new subscriber and dolls will be sent by parcel post, prepaid. Miss Gortman, Attention, Dept. A, Indianapolis, Ind.

spiritual child. The neglect of any of these duties checks his highest development and bars him from the happiest sphere in life.

While being punctilious about our own duties, we must not neglect the important teaching of the child's duties to himself, and what he can and should do for himself, and of the many things which he will be "bound by moral obligation to do, or refrain from doing."

PUFF BALLS AS FOOD

IT IS NOT generally known that the ball shaped fungi commonly known as puff balls, which appear at this time of the season in moist pastures or even dooryards, are choice articles of food for persons who are fond of mushrooms. They are often abundant on the grazing grounds in our foothills and mountain meadows, where they sometimes reach a size nearly as large as a football. None of the puff balls are poisonous and, as they are easily recognized, they may be safely gathered by almost anyone with the assurance that no danger will follow their eating. The only precaution necessary is to gather them while they are fresh and firm and before any yellowish or brownish coloration of the interior appears. When in the proper condition they are almost pure white inside and somewhat resemble cottage cheese when broken open. They are well adapted to the method of cooking employed in the preparation of French toast. After cutting them in slices about one-half to two-thirds inch in thickness, they may be fried in butter or fat, after being first dipped in milk and egg batter. They also lend themselves readily to other methods of cookery such as are employed for the common mushroom.—B. O. Longyear, Colorado Agricultural College, Fort Collins, Colo.

THE BEST RECIPES

Under this head will appear an expert's opinion of the best recipes, one from each of the papers and magazines which come to her desk.

REALLY GOOD KRAUT—Select firm heads of cabbage, split each into about eight pieces. Drop into a barrel until the bottom is covered and cut up finely with a bright, keen spade. Salt to taste. Then, layer by layer, fill the barrel with the same method. When full cover with a circular board and weight it down heavily. If in three days a briny liquid does not rise and cover the board weight, add sufficient water to do so. Let remain in a warm place until soured enough, then remove to a cool corner of the cellar. If allowed to freeze slightly the flavor will be improved, also the keeping qualities. This is the old-fashioned way of making kraut and no other method is better. *From Successful Farming.*

STEWED CHICKEN—Mother took a young chicken of not more than four or five months and after jointing and washing it thoroughly rubbed salt over each piece and placed it in a stewpan with just enough hot water to cook. When half done one cupful of butter was added, the kettle covered and the chicken allowed to stew slowly until tender. No other way ever tasted as good as that which mother used in the days of our childhood. *From Farm and Fireside.*

TOMATO CHUTNEY—Peel, core and quarter twelve large, sharp, baking apples. Cut four pounds of green tomatoes in slices. Boil both together, with three-quarters of a pound of sultana raisins and one pint and a half of vinegar, in an enameled pan until reduced to a pulp, then rub through a fine sieve, chopping all that refuses to pass the mesh and adding it to the rest.

Put one cupful and a half of sugar into the pan with a second pint and a half of vinegar; boil until thick; stir the fruit pulp with a wooden spoon; add one tablespoonful and a half of dry mustard, two teaspoonfuls of salt, three tablespoonfuls of powdered ginger and half a cupful of finely shredded onion. Boil slowly for fifteen minutes. *From the Prairie Farmer.*

SPICED APPLE JELLY—Wash and cut in pieces, leaving seeds and core, one-half peck of apples. Boil them until tender in three pints of vinegar and one pint of water to which has been added one ounce of stick cinnamon and one-half ounce of cloves. Strain through a cloth. To each pint of juice allow one pound of sugar, boil in small quantities and when cool cover with paraffin. Use ordinary apples or crab apples. *From Oklahoma Farm Journal.*

SNOW CAKE—Cream together one-fourth cup of butter and one cup of sugar. Add one-half teaspoon of vanilla and one-half cup of sweet milk. Beat stiff the whites of two eggs, fold in with one and two-thirds cups of flour in which two level teaspoonfuls of baking powder have been sifted. Do not stir much after the flour and whites of eggs have been added. Bake in moderate oven. *From The Farmer.*

SPICED APPLES—Take eight pounds of pared apples, four pounds of sugar, one quart of vinegar, one ounce of stick cinnamon and one-half ounce of cloves. Boil the sugar, vinegar and spices together, add the apples and cook until tender. Place the fruit in jars, fill them with the syrup and seal. *From the Nebraska Farmer.*

PICKALIN—Grind two gallons of green tomatoes, mix with one small cup salt, tie in a cloth and put a weight on them over night to extract juice. Grind a gallon each of apples and cabbage, mix with tomatoes in a porcelain or granite dishpan. Grind the mixed spices that are sold at groceries, adding celery seed and mustard seed to taste, cover with vinegar and add sugar to suit taste. Let it boil two hours and seal in jars. This is a fine recipe. *From The Oklahoma Farmer-Stockman.*

BEEF AND POTATO ROLL—One pound of beef, half pint of chopped cold boiled potatoes, one teaspoonful of salt, one egg, one saltspoonful of pepper, tomato sauce. Remove from the beef all the surplus fat and skin; put it twice through a meat chopper. Add to it salt, pepper, chopped potatoes and the eggs, unbeat. Mix thoroughly and form into a roll about six inches long. Roll this in a piece of oiled paper, place it in a baking pan, add a half cupful of stock and a tablespoonful of butter. Bake for half an hour, basting once or twice over the paper. When done remove the paper, dish the roll and pour over it either tomato or brown sauce. This is one of the nicest of cheap dishes for luncheon. *From Farm, Stock and Home.*

CREAMED CELERY—Remove the leaves and small stalks from two heads of celery, wash and cut in half-inch lengths. Boil in salted water until tender. While the celery is boiling make a sauce of one cupful of cream or thick milk and one tablespoonful of butter mixed with flour. Boil the sauce until it is smooth and thick. When the celery is ready drain and place it in a dish, pour over the sauce and serve. *From The Mother's Magazine.*

BUCKEYE STATE COOKERY

By A. C. McPherson

RICE PUDDING—Boil rice until soft and thick in cherry juice. Put in a mold, serve with cream and sugar.

CORN STARCH PUDDING—Two quarts of

milk, three eggs, half cup sugar, pinch of salt and two tablespoonfuls of corn starch. Let milk come to boil, have the other ingredients mixed together and stir in. Flavor with vanilla.

GRAPE CATSUP—Wash and weigh the grapes, boil and strain. Allow three pounds of sugar to every six pounds of fruit. Add one pint of vinegar, two tablespoonfuls of ground cinnamon and one of cloves. Boil until of the desired consistency, then bottle and seal.

SPICED GRAPES—For every five pounds of grapes take three pounds of sugar, one tablespoonful allspice and cinnamon each, and one teaspoonful of ground cloves and half a pint of best cider vinegar. The spices can be kept separate by placing in a small cheesecloth bag. Boil one hour or until the juice is sufficiently thick. Put in jars and cover closely.

GRAPE JELLY—Grapes should not be quite ripe for the best jelly making. Cook in a porcelain or granite kettle until soft, then let drain through a cheesecloth bag. Do not press or the juice will not be so clear and transparent. Let the juice boil twenty minutes, then add almost but not quite a pint of sugar to each pint of juice. White or granulated sugar is best. Let boil for one minute, then remove from the fire and fill jelly glasses.

UNFERMENTED GRAPE JUICE—Grapes should be fully ripe for this purpose. Pick from the stems, wash and drain. Mash and place over the fire. Do not add water, but cook in its own juice if possible. When the pulp is dissolved turn it into a flannel or cheesecloth bag just wrung out of boiling water. Let drain awhile and when cool enough squeeze until all the juice is extracted. Place the juice to heat again and when almost boiling strain again. Once more place it over the fire and when boiling hot bottle and seal.

Unfermented grape juice is a great blood builder and tonic and where there are weak or debilitated members in the family a quantity should be prepared for home use, as it is quite costly if purchased. Sugar may be added if liked when wanted to drink, but it is best with only the grape sugar nature placed in the fruit.

Should Cheer Up
"You ought to be more cheerful since the doctor said you are as sound as a dollar."
"But he charged me five dollars for saying it."

HARTMAN'S Special Farm Credit Plan

In order that farm dwellers everywhere may take advantage of these wonderful bargains, we have devised an unusually liberal credit plan for their special needs.

This plan is in accordance with the President's recommendation to Congress regarding a more liberal extension of farm credits. Only the great Hartman concern with its enormous capital, 22 big retail stores and gigantic mail order house, could make such a plan successful. Most farmers meet their obligations when they sell their crops and stock. That's when you can settle with us—pay all or part in 6 or 9 months or a year if you like.

The Great Hartman's 60th Anniversary Sale

To us, this 60th Anniversary Sale means pride in achievement—to you an unusual money-saving opportunity. We have scoured the world's markets, bought out factories, controlled outputs, placed all our energies and our Ten Million Dollar Purchasing Power behind this unprecedented sale which can only be summed up in the one word—UNEQUALLED!

ORDER AS MUCH AS YOU LIKE

The specially advertised items and prices shown here are only the merest suggestions of truly wonderful bargains here awaiting you during our great 60th Anniversary Souvenir Sale. Order one or all of them. Don't send a penny in advance or make deposit of any kind. Your credit is absolutely good—and it is wide open! No red tape—no references—no mortgages—no security of any kind—no extra charges—Hartman trusts you implicitly and allows you to pay for any amount of goods you see fit to order, absolutely at your own convenience. Never before have such astonishingly liberal terms been made by any concern in the entire history of merchandising! 30 Days Free Examination. At the end of a month you are privileged to return any article if not perfectly satisfactory. Hartman cheerfully pays freight both ways.

Hartman's Souvenir Bargain Book

The Hartman Free Souvenir Bargain Book shows everything in home furnishings, including wondrous assortments of carpets, rugs, draperies, in actual colors—patterns and designs photographed from the originals. It is like bringing into your home attacks of Furniture, Carpets, Stoves, Silverware—everything in home furnishings—many times the size of the largest city stores.

D-20, Topeka, Kan.

What is Now the Fashion

6834—LADIES' DRESS. Has a plain blouse with a vest in front and two small ornaments over this at the bust line. The sleeves are small and are inserted without fullness at the shoulder and with a small armhole. They may be long or short. The skirt has four gores and may be attached to the blouse with either the raised or the regular waistline. Sizes 34 to 44 inches bust measure. Medium size requires 3½ yards of 44-inch material.

6837—LADIES' DRESS. This is one of the best of the newer tunic models. It has a wide yoke, which gives the effect of the very long waist, now so popular. Below this is a two-gore skirt and over it a tunic, attached at the lower edge of the yoke. Sizes 22 to 32 inches waist measure. Medium size requires 1½ yards of 44-inch material, with 2½ yards of 36-inch striped goods. In one material 4½ yards of 44-inch material will be required.

6868—DRESSING SACCUE. Here is a design for a charming dressing sacque and cap. The sacque has body and sleeves in one and may have a center-back seam if necessary. The closing is in front in surplice effect and there is a circular peplum, which completes the garment. The cap is round and is in one piece except for the ruffle, which is separate. Sizes 34 to 44 inches bust measure. Medium size requires 3 yards of 36-inch figured goods and three-fourths yard of 36-inch plain goods.

6852—GIRL'S FROCK. The blouse is made with a very long waist and fastens in the front. It is joined to a tiny circular skirt. The sleeves may be long or short and are finished with a band cuff. At the neck is a handsome square collar. Elizes 2, 4 and 6 years. Medium size requires 1½ yards of 36-inch figured goods and five-eighths yard of 36-inch plain. In one material 1½ yards of 36-inch goods will be required.

6862—BOY'S SHIRT. It has a straight front with long sacque extension below the belt. In the back is a shoulder yoke, to the lower edge of which the material is attached after being slightly gathered. The sleeve is regulation, plain at the shoulder and ending in a cuff at the wrist. The neck has a band finish and the pattern provides a collar design, which may be used if desired. Sizes 4, 6, 8, 10, 12, 14 and 16 years. Medium size requires 1½ yards of 36-inch material.

6842—GIRL'S DRESS. An excellent model for growing and half-grown girls. It has a plain, loose blouse buttoning in the back and made with a wide collar and low neck. The plain sleeve may be long or short. The underskirt has two gores and over it is worn a tunic drapery. The skirt also closes in the back. Sizes 8, 10, 12 and 14 years. Medium size requires 1½ yards of 44-inch plain and 1½ yards of 36-inch plaid.

6865—LADIES' APRON. Made with plain waist, the small sleeve sections cut in one with the body, the whole closing in the center of the back. The skirt has a front gore which is shaped so as to fit the figure neatly and two back gores, gathered and

meeting in the middle. Sizes 34 to 44 inches bust measure. Medium size requires 3½ yards of 36-inch material.

6437—LADIES' WAIST. This shows a waist which may be combined with a variety of skirts and made of any soft material. It has the deep shoulder yoke in one piece, the front and back being both gathered where they are attached to its lower edge. The sleeve is joined to the yoke with a drop shoulder seam. This, too, is gathered at the top and again at the wrist, where it forms a frill held in by a band cuff. Sizes 34 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material.

6848—LADIES' SKIRT. The upper part of this skirt may be made with either two or three gores. The lower section has two pieces only and is seamed at the side. The upper part fits neatly in front and is gathered across the back. Sizes 22 to 32-in. waist measure. Medium size requires for three-gore skirt, with lower section cut crosswise of the material, 3½ yards of 36-inch material; for three-gore skirt with lower sections cut lengthwise of the material it will require 2½ yards of 44-inch width. For two-gore skirt, with lower sections cut lengthwise of the material, 3¼ yards of 44-inch goods will be required.

6862—GIRL'S FROCK. A simple and practical frock for a little girl. It is of sacque cut, without division of waist and skirt, a row of shirring marking the waistline. The closing is in front and is double-breasted. The neck is round, with a small collar, and the sleeves long or short, with dainty cuffs. Sizes 2, 4 and 6 years. Medium size requires 2¼ yards of 36-inch material.

6460—CHILD'S SACCUE APRON. Covers the entire dress. It has a small collar at the round neck and band cuffs finish the sleeves at the wrist. Two patch pockets complete the apron. Sizes 2, 4, 6, 8, 10 and 12 years. Medium size requires 2½ yards of 36-inch goods.

6861—GIRL'S FROCK. A smart little frock for a half-grown girl. The blouse closes at the side of the front and has long sleeves attached to a long shoulder. At the neck is a wide collar. The skirt has three gores and closes at the left side of the front. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 1½ yards of 44-inch goods, with five-eighths yard of 27-inch to trim.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Florida, Georgia, Alabama, Mississippi and Louisiana—C. B. Lozier, district manager, 212-215 Masonic Temple, Mobile, Ala.

Nebraska

E. F. Walton, Geneva, to whom all prospective organizers should apply.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

We believe the people who talk about the freedom and independence of farmers do it to flatter them and to keep them from expressing their dissatisfaction and demanding their rights, which could soon lead to true independence and real freedom.

We have said before in these columns that the man is not free who depends on others for the price of his products and which measures his wages and profits. This is the condition of farmers even today, when practically every other industry and class of people is organized. Under our present marketing system the farmer is less independent than the hired man who works for him, because the latter fixes the price for which he does the work, but the farmer has his wages fixed by a set of people who had no part in producing, but became interested in marketing after the farmer's work was done.

And these people who take the crops and market them realize the very advantageous position they occupy, and they certainly want to perpetuate such a splendid arrangement. To do this they have organized the farthest reaching movement that ever was abroad in the country for their own defense, and offense against any promising movement amongst the farmers looking to secure their industrial freedom.

To get an idea of the organization and movement we refer to, we again call attention to the Council of Grain Exchanges, which is a federation of all the leading boards of trade, produce and cotton exchanges and chambers of commerce that speculate in various farm crops. Naturally, these institutions do not want farmers to organize to control their own crops and distribute their crops at their own prices and on their own terms. For several years the movement we refer to has been insidiously at work. The work has been directed entirely to greater production and to keep the farmer's mind centered on this and away from the marketing and price side. To accomplish its ends the council, the various members of the council and the various grain dealers' organizations all over the country and some other organizations have thrown their influence to the State Agricultural Colleges to en-

large the colleges' fields of activities and get greater appropriations from state legislatures and Congress.

The vocational education law in Indiana, which immensely enlarges the field of the agricultural college's work and puts a vast sum of money in its hands to spend, is one of the results of this concerted movement to keep the farmers' attention riveted on production and away from the even more vital part of his business—the marketing and price. And similar laws have been enacted in other states. And the federal Lever law to establish and maintain agricultural experts on production in all the counties in the country, is another result of the insidious movement that has been abroad in the country. Also the boys' corn clubs, the girls' canning clubs, alfalfa schools and tours and other activities exclusively for greater production, and which are usually championed by the State Agricultural colleges, should more properly be credited to the farmers' and people's worst enemies, the boards of trades and exchanges organized for to speculate and gamble in the products of the farms, the necessities of life.

Don't understand that we are condemning all of these things. Under right conditions of marketing, which we hope to see ere long, when all of the demand can be found and supplied, we believe greater production in some lines will be well. But under present marketing conditions the increased production rarely inures to the benefit of the farmer, but to those who handle, transport and gamble in it. And this is exactly what the great movement is being carried out for. It can be proven by the government's own statistics, and which are the most reliable that we have, that average crops are the most profitable and that any considerable departure beyond the average total crop reduces the price in a greater ratio. What we complain about and protest against is that this greater production propaganda, usually conducted by the agricultural institutions in co-operation with the board of trade and exchanges federation is keeping the farmer's attention away from the marketing side of his business. And we urge farmers, while learning from these teachers how to produce more and better, to not for-

get the marketing and pricing side and learn from every available source the lessons of profitable marketing.

Also we find, in many places, the merchants and manufacturers oppose farmers' efforts to organize. We have known some places where the farmers would not go down to the town to organize because they would run the risk of being ridiculed or threatened by the merchants. If farmers organize for marketing, as they should, the fears of the merchants and manufacturers will be groundless. Farmers should not organize to start stores and factories. Where it is known that such is not their object, the business men can well afford to help them to organize for selling, even though they would in some cases thus buy in club lots. The home merchants, if they show their friendliness, can still continue to supply the farmers' needs. If, through the right kind of organization and co-operation farmers sell right and always get the money they should have, merchants and manufacturers may benefit in business as much as the farmers do. Marketing right, to protect the farmer in his outlay and profits, must be the chief end of the farmers' organization that will be sound and enduring. On this platform every business man can stand with the farmers, unless his business is speculative and depends on uncertainty of crops and fluctuations of prices.

Probably no movement has been resisted more by other classes than the past efforts of farmers to organize. Along right lines, as we see them, every legitimate and necessary business, and all classes of our people will be promoted and benefitted along with the business of agriculture. It is agriculture rightly organized that can guarantee permanent prosperity in America. An organization to deliver these results must permanently hold in its membership enough farmers to control such part of any crop that in the past has gone into the hands of speculators and permitted them to become competitors in supplying the demand. Also it will be almost as bad if the supply of the crop is represented by two or more farmers' organizations, friendly though they may be to each other, but which do not operate as one.

So the whole proposition comes down to this question: What is the right kind of farmers' organization?

This paper has led in co-operative thought for years. It has led in organization work in its field for years, as others have led in other fields. In this time, covering about twelve years, we have seen farmers go into various organizations to a greater numerical strength than ever before. But the one great farmers' problem—marketing to protect the man who produces—has not been solved. For a fact, instead of it being solved it is today more complex with worse results, taken as a whole, than ever before. This has caused thinking people to investigate other examples of organization and co-operation. Looking to commercial and manufacturing fields we discover that a few years ago manufacturers and commercial interests were in much the same condition—many competing units. Since then they have combined the competing units and today we have in this country examples of industrial co-operation that are the marvels of the world.

What they have done, we are certain farmers must do. We passed the individualistic stage years ago and now we can see that we must take another step and pass the community co-operation stage. Farmers must now realize that they must not only recognize the problems on their own farm and of the community, but the national problem of marketing. So the thought is turning to federating all the community units into a broad, comprehensive, national

organization, equipped with a practical business system that will automatically support itself as long as used, and guarantee its perpetuity.

And we are pleased to note that the farm press is inclined to support a federation of the present organizations. As an example, we quote this from the editor of a prominent fruit paper:

We certainly believe in the plan of the American Farmers Federation and agree with you that the farmers must pull together or they will continue to be robbed of the money that really belongs to the producers of the crops.

And this from the editor of a farm paper of large general circulation:

I feel that the fundamental idea of the American Farmers Federation as adopted at the recent meeting, is the one that is necessary and must eventually be adopted to solve the marketing problem. With that idea in mind, I am going to put a good article or two relating to this particular question in our paper between now and the December meeting.

We claim that on the agricultural press, more than on all other things combined, rests the responsibility to now quickly complete a sound organization for farmers. We say to the farmers that it is the positive duty of the agricultural press to see that at last a sound organization is built around "the fundamental idea of the American Farmers Federation," which "is the one that is necessary and must eventually be adopted to solve the marketing problem," as the one editor expressed himself. And we advise the farmers to hold the agricultural press to its obligation. Write to the editors of the papers that you subscribe for and tell them to print the plan of the federation and when the time and the place of the December meeting is decided, to print it and urge their readers to attend it. If the next meeting in December is largely attended by representative farmers, producers of all crops, we predict the world will be astonished at the way the federation movement will sweep the country next year, 1915.

So more men are willing to fight for farmers' industrial freedom as the safe, sane, sound plan crystallizes. If farmers themselves were wise, or even if more of them would display good, common business sense, the fight would be made easier for them. The farmers take little thought for a dollar or two when it comes to some little improvement or convenience on the farm; or for gratifying a wish or pleasure. But we have known the same farmers to refuse to support their organization, which is paying them dividends on every farm effort they make, and which will pay greater dividends as it is developed. Every farmer knows that his class must co-operate and that he must be a part of the organization and that along some line it must be carried to completion.

We will give an example: In a late report from a district that is well organized in the Farmers' Society of Equity, and which district has been deriving large benefits from marketing, for the members, was this:

The annual dues of many of the members of the Society in this section have not been paid and I fear that we will not be able to collect many of them. The reason advanced by the members is that headquarters is not doing anything for them and they cannot see any reason why money should be sent to headquarters.

This is a case where the members have forgotten that they joined an organization that proposes to establish itself all over the country to bring about national co-operation. Now that they are organized and have been nursed along by the national head and finally established in business under the system given them by headquarters, and they can stand alone and get some benefit, they refuse the annual dues and seek to close the door to the greater benefit they will get as the organization develops. In other words, they elected to stand as a local organization and, of course, can never

Big Money Running A Wagon Drug Store

No Experience Necessary

Read this advertisement carefully. Then, if you feel that you can measure up to the qualifications we require, mail us the coupon below at once and get full particulars of how to start and conduct on our capital this wonderfully profitable and fascinating business of running a Wagon Drug Store—selling a big modern line of Sanitary Medicines, Toilet Goods, Perfumes, Soaps, Spices, Extracts, Stock Remedies, etc., direct to farmers and homes on the most liberal, easiest plan of selling ever conceived.

Are You the Man We're Looking For?

You are, if you're sober, industrious, honest and reliable and can furnish a team. Don't get the idea that you must be a registered druggist, or, in fact, know anything at all about the drug business. Neither is previous experience in selling goods at all necessary. Our selling plan of leaving goods at homes without deposit, on our Sanitary free trial plan is entirely different from all others—wipes out all competition—everywhere. Our goods give better satisfaction to customers—and we give you thorough instructions how to earn, clear of all expenses, from—

\$100 to \$150 Per Month

right from the start! It is then an easy matter to build your business up so that it will net you a steady income of from \$2,000 to \$4,000 a year because the work grows easier and the profits larger every year.

You've no idea what a stupendous and lucrative business running Wagon Drug Stores really is. Already more than 20,000 of these wagon stores are doing big business all over the United States and every day sees more and more ambitious men who have grown tired of hard work and small pay on the farms, in stores, shops, offices and factories, embarking in this independent, care-free business where every man is his own boss, the work pleasant and easy, and his income limited only by his own efforts. This is indeed an exceptional opportunity. If you have ambition and energy and a real desire to make more money, build up a profitable business of your own and become financially independent you can't possibly do better, without capital, than to apply at once for exclusive territory for a McNess Wagon Drug Store.

No Capital Required

A team and wagon is your only investment. If you have a team, or can get one, we will supply you with a dandy wagon, made especially for the business, at bed rock factory cost and on easy terms. We will also supply you, at very low wholesale prices, with a \$500 to \$3,000 stock of goods on credit. We won't charge you a cent of interest and you can pay us as your customers pay you. In this way you can conduct and build up your business on our capital. Should you at any time and for any reason wish to quit the business you can return to us all unsold goods you have on hand and we will give you full credit for them; and you are privileged to sell your territory.

From every viewpoint and all the way through, we give our salesmen the squarest deal of any concern in this business. We are the leaders in quality—low prices and unequalled selling plan. We'll give you ample proof of this when you write us.

Big Profits at Pleasant, Healthful Outdoor Work

When you engage in this business you are literally a drug store proprietor—only you don't have to be a druggist, fill prescriptions or anything like that. Instead of people coming to your store to buy, you take the store to them; that's what makes the wagon business such a tremendous success. And it's mighty pleasant, healthful work, too! Keeps you out in the fresh air and sunshine, traveling around over the country roads, meeting different people and forming lasting friendships with your customers. If the roads are muddy and impassable, simply lay off work for a day or so. That's your business—you're free and independent—no boss to tell you when you shall work. Our goods are easy to sell—they give such splendid satisfaction that you can sell to the same customers regularly month after month—you make big profits on all your sales and every dollar of profit you make you can shove in your pocket and call your own! But, by our easy selling plan you don't need to be a salesman at all—you simply leave the articles at

the farmers' houses or other homes—leave some soap, some tooth paste, some spices, some extracts, cough medicine, tonics or stock foods or remedies. Also leave some free samples; go to the next house and do the same thing. Then in a few days after you have covered your territory, work back and collect for whatever your customers have used—leave some other articles, call on the next family, collect for what they have used, leave some more articles and so on and you will find in this way it is the simplest, easiest and most remarkable way to sell practically every home its entire supplies that has ever been adopted by any salesman. People will gladly buy of you because they will find each and every article far superior to others and the prices the most reasonable. By this remarkable plan salesmen are now becoming rich and independent. Let us tell you more about this easy, sure and wonderful business. Send coupon below for full information. Our Sanitary Free Sample Plan is meeting with tremendous success. No other company can withstand our competition. Just think of it! We are the only company who make up samples to leave at the homes with the goods, so your customers can try the samples first and be convinced that our goods are best. No other company dare compete with us on this Sanitary Sampling Plan. Let us send you our booklet "Murder Will Out," fully explaining it.

Exclusive Territory Given

We make no charge for Exclusive Territory. We have a few choice territories still open, but they are fast being taken up. We can probably give you territory near your home, in your own county, and we'll give you exclusive agency rights in it as long as you work it thoroughly and treat your customers right. If you secure an exclusive agency with us now you can make your territory worth thousands of dollars in a few years.

Mail Coupon Today!

We hope we have made it plain to you that running a McNess Wagon Drug Store is not a job for idlers, loafers and triflers. It is a job for earnest, conscientious, energetic men—for you men who want to quit farm work, strike out for yourselves and establish a permanent, profitable business of your own—men who want to be prosperous. If you are one of that kind we honestly believe that this is the best proposition in the world for you. It will be well worth your while to learn more about it. Our most interesting booklets tell the whole story. They are Free. Just fill out the coupon and mail it to us at once! Next week the territory you want may be taken. So act quick and mail the coupon today.

PERSONAL—(Continued)

expect more than the benefits a local organization can get them.

We bring these matters up for the very serious consideration of all farmers, whether in an organization or on the outside. A co-operative solution of the marketing problem is possible only when the parties to the co-operation are loyal to each other. Therefore, we plead for loyalty to each other which will be loyalty to your organization.

The dues-paying date of many locals of the F. S. E. is October first. From what has been said above it should not be necessary to say more to persuade any member, who was wavering, of the importance of paying his dues on time. There is going to be a grand and glorious future for American agriculture through a sound organization. So no matter what organization you belong to now, support it and wait for the consummation of the great federation that we feel is bound to come, and which will make the present competing units co-operative units and thus furnish the most stupendous example of industrial co-operation the world has ever known.

If there is no organization at your place, send this blank and get full instructions.

CUCUMBERS A MONEY CROP

CUCUMBERS are not grown extensively, it seems, but being fond of the vegetable I wanted to plant some one year. As it happened, all the garden space was taken up, so I had the boys to break up a ten or twelve foot strip between rows of apple trees in the orchard. During the summer and fall, I gathered enough cucumbers to pickle a medium-sized vinegar barrel full of this much relished vegetable.

I was so pleased with my undertaking that I decided to work my business on a larger scale the next season. Accordingly, I began early enough the next year so that I would be enabled to give my ground the preparation I had planned. First, the ground was broke deep, and thoroughly harrowed until the soil was mellow. Then I made my hills about five feet apart. In each hill I dug an opening and emptied into it one-half gallon of sand from the banks of a nearby stream. The sand was thoroughly mixed with the soil, and into each hill I dropped fifteen seed. When the plants were up and all danger from frosts had passed, I thinned out the plants to about six to the hill. There were about one hundred hills in a row, and the rows numbered thirty-five. The season furnished plenty of moisture for the crop, and they yielded an average of almost a peck of cucumbers to the hill.

I picked them and sold them by the barrel to merchants in our home town at a few cents less than wholesale price. Although no strict account was kept of the sales and amount sold, the crop netted me a little over four hundred dollars, after allowing a reasonable amount for labor, vinegar, barrels, etc. We counted this almost clear gain, as the orchard had not been tended for years, and let me add right here that we had a better apple crop after cultivation was started up between the rows.

Sixth Annual Convention of the Farmers Society of Equity

The next annual convention of F. S. E. is ordered to meet at Pocatello, Idaho, in December. The exact date will be announced later.

At the annual convention national officers and directors will be selected for the ensuing year and every other thing done that may be considered for the benefit of the society. As relates to the annual meeting and selection of officers and directors, we print from the by-laws of the society as follows:

ARTICLE IX
OFFICERS

Sec. 3. The officers of the National Clearing House shall be a president, a vice-president, a secretary, a treasurer, a national organizer, and seven other directors. All are elective officers except the secretary.

NOMINATIONS

Sec. 4. Any member in good standing, and who has been such for at least one year, shall be eligible to election to any office in the national clearing house. Subordinate clearing houses and federated associations may, by majority vote, nominate one candidate for each of the offices named. Such nominations must be reported to the national clearing house on or before a date seven weeks prior to the opening date of the annual meeting. These shall be the nominees. They shall be published in the official paper of the society in at least three issues immediately preceding the annual meeting.

ELECTION OF OFFICERS

Sec. 5. The officers and directors of the Farmers Society of Equity, with the exception of the secretary, shall be elected by the members-at-large, the organized local clearing houses and the associations federated for marketing. The members of such shall express their choice on ballots furnished by the National Clearing House, or printed in the official paper or on other paper. Each member shall be entitled to one vote for each officer. Said ballots shall be sent to the National Clearing House by mail, or they may be brought to the annual meeting by the delegates.

To comply with the terms of the by-laws it will be necessary to have all nominations in the national headquarters office by October 21, and printed in November first number of the official paper. Locals and federated associations should not put this matter off, as nominations close at headquarters on the 21st of this month.

Nominations may be made on this blank. (Do not nominate Mr. Everett for the presidency. He said a year ago that he would not be a candidate again.)

BALE TIES

Writing about a car load of bale ties obtained through the National Clearing House, delivered to Humboldt, Kas., Mr. A. R. Baxley, secretary, says: "Must say the ties are first class in every respect and give complete satisfaction. These ties cost us 80 cents, while the best we could do here was 90 cents, with quality not so good."

If you and your neighbors have not bought your baling wire you can hear of something to your advantage by writing
The Equity System Indianapolis, Ind

PREPARING PRODUCE FOR MARKET

FAILURE to send produce to market in proper condition is the bane of the buyer and robs the seller of possible profits.

The organized farmers of Baldwin county, Alabama, have been made to realize fully that any crop worth growing is worth taking care of when grown, and not to take care of it renders the crop not worth growing.

Take potatoes for example. They should not be dug when the ground is wet. By no means allow them to sun-scorch. Put them in good, clean sacks, never in fertilizer sacks. These precautions will save rotting. Failure to take them will almost invariably cause trouble and loss.

It requires care to make farming pay, and every farmer everywhere, should do all in his power to see that his products are A No. 1 when sent to market. Here is where organization and co-operation can help. Join an association and work for standard goods.

A clean-handed milker, a clean-uddered cow and a clean can are about all the requirements necessary to clean milk. There's too much fol-de-rol in the dairy inspection business, altogether.

Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

Don't be afraid or ashamed to learn from others, for, as Ben Johnson has said, "Very few men are wise of their own counsel or learned by their own teaching, for he that is only taught by himself has a fool for a master."

We were surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent of the farms in the country.

Grape vines are inexpensive to start with. They are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and they practically last always. In addition to all of these things, grapes bear fruit every year and the fruit is healthful, valuable and desirable almost second to none that grows.

CENTS EACH or more from nursery salesmen.

The varieties are Niagara, Moore's Early, Concord, Diamond, Worden and Catawba. This collection comprises extra early, medium and late varieties, and the three colors, black, red and white. Full directions will be sent with each collection.

Our Offer Send 75 cents and get this collection of six grape vines and UP-TO-DATE FARMING one year, or send a club of five at 50 cents—\$2.50—and we will send you thirty vines and the paper one year to each subscriber. Send the coupon.

OUR MARKET REVIEW

Reports of Crops, Markets, Trade, Etc., With Advice

AS OF September 19, Bradstreets summarizes the general state of trade as follows:

Irregular, but tone better. Improved exchange market. Better crop reports. Enlarged export trade. Firm cotton prices, due partly to buy-a-bale movement. Cool weather helps retail trade. Reverse features. Industry slow. Building checked. Money and credit conditions arrest improvement. Cotton crop moving a problem despite efforts. Clearings shrink from year ago. Failures numerous.

The markets have assumed a steadier condition and seem to be settling on the basis that the disturbance in Europe will be quite a protracted matter. The great and sudden fluctuations in the prices of grain are not likely to be repeated, at least not so frequently in the future, but we believe in the long run prices will be higher for wheat, oats and corn than they have reached heretofore. The cotton situation is clearing some, but full relief to the southern planters will not come until the end of the war and the resumption of the industries in European countries. The "buy-a-bale" movement will help temporarily a little, but such cotton must eventually go on the market, consequently it is only a temporary advantage. The scheme to get the United States to advance some hundreds of millions of dollars to growers and accept cotton at 12 cents will hardly appeal to the Congress because it would be certain to encourage larger production in 1915, and an unwieldy surplus. The "cut out the 1915 crop" advocates are also on the wrong track. It would deprive many southern farmers of a means of livelihood and would, we believe, be as fatal to the south as a pestilence, followed by famine, if it could be accomplished. But it could not be done short of state proclamations, which will not be made. Any voluntary attempt on the part of the farmers to do it would result in many growers planting larger crops and defeat the movement. The position of this paper in an emergency where a surplus crop has been produced, is for the producer to hold the surplus himself. He will then have the greatest

kind of wheat will be higher with spring wheat selling at a broad premium over winter as soon as the early rush to dump is over.

Corn prospects have improved with better weather. The visible supply shows no material change and the price is about the same as two weeks before. The predictions that are being made for a crop considerably above normal we believe are not justified. The crop, from our observation, and reports, will be larger than last year, but will hardly exceed 2,600,000,000 bushels.

Oats, visible, showed the largest increase of the grains in this country, but Canada has been drained about dry for export. We do not look for lower prices, but prospects are that they will be higher.

The potato crop will be a good comfortable one, not so small as to make high prices likely, nor so large but what judicious marketing will give growers a nice, profitable price for every bushel. Don't dump, but market when price in central markets is around 75 cents. Market gradually.

ADVICE

WHEAT—Hold for \$1.25, the price adopted by the Kansas City meeting in August. **CORN**—Sell old crop. Sell some new crop, if about 60c or above from the field. **OATS**—The price is good, but we look for it to be higher. **POTATOES**—Keep 75 cents at Chicago in mind and market on that basis. If marketing stops when the price goes below 75 cents, or slacken materially, it would go right back. **COTTON**—See advice above.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreets reports, on September 12, 1914, with comparisons, are shown in the following table:

	Sept. 12, 1914	Change from two weeks before
WHEAT	38,582,000 Bushels	X 38,582,000
CORN	7,078,000	X 1,701,000
OATS	28,767,000	X 4,315,000
BARLEY	3,635,000	X 1,632,000

The visible supply of wheat in Canada on the same date was 16,381,000 bushels. This is 8,014,000 bushels more than two weeks before and is 8,451,000 bushels more than a year before. The visible supply of oats was 781,000 bushels on the same date, which is 392,000 bushels less than two weeks before and is 4,972,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on September 22nd, two weeks before and a year before as follows:

	Sept. 22, 1914	Two weeks before	A year before
WHEAT, NO. 2 RED

	This week	Last week	Last year
Monday	70	80	130

Trade dull today and prices fully 8c lower. Jewish holidays kept a number of buyers away and hot weather caused pressure to sell. Receipts were not heavy, but advices were to the effect that a much more liberal movement marketward has been started and the expectancy is for more liberal supplies.

Sales reported were: Per bushel, bulk—Wisconsin—part red and white—2 cars at 65c, 4 cars at 65c, 3 cars at 68c, 1 car Triumphs at 69c, 1 car round white at 70c. Sacked—2 cars long white at 65c; Minnesota—2 cars Ohio at 70c, 1 car at 72c. Per bu. Minnesota Early Ohio, bulk or sacked... 65¢/72¢ Dakota Ohio... 65¢/70¢ Jersey Green Mountains... 65¢/70¢ Jersey Giants... 75¢/77¢

The price of potatoes is unchanged to 5c a bushel lower than two weeks before. A year before the price of Minnesota Ohio was 80c to 83c a bushel.

SWEET POTATOES—Were selling fairly. At the beginning of the week the trade always lays in some stock. Market quoted as steady.

Our Short Story

Won by Strategy

MILLICENT WARRINGTON, a Chicago girl, threw down the Sunday supplement of the Chicago News and turned to her mother.

"Mama, I'm going to raise chickens and make some money myself. There's plenty of room in our back yard and I've been reading all about the new Flo system, and one man who worked in a bank made \$3,000 in six months on a lot no larger than ours."

This was the beginning. Mrs. Warrington protested to no avail. That she nor Millie nor Mr. Warrington knew absolutely nothing about chickens did not daunt the girl. She could learn. Didn't the advertisement say that absolutely no experience was necessary if instructions were followed? Didn't that bank clerk begin with no knowledge of the business, and succeeded right away? There was plenty of room in the yard and she had plenty of time and all one had to do was to feed and water the hens and carry in the eggs.

Millie had her way, as usual. A few days later the expressman left a box containing two very large, very yellow birds. They were buff cochins, but not one of the family knew the difference between a cochon and a guinea fowl. Chickens were chickens to them.

A few weeks later Dick Hargrave called at the Warrington home and found the old people in earnest conversation.

"What's the trouble?" he called cheerily. "You look as though all hope has fled."

"Trouble enough, Dick," replied Mrs. Warrington. "There's something wrong with Lucy."

"Lucy. Who's Lucy? Another new cook?"

"No, Lucy is Millie's hen, and she is not doing right at all."

"You see, it's this way, Dick," said Warrington. "Millie has been crazy to raise chickens. Nothing else would do, so one day some sap-head bought her a big yellow rooster and his wife—"

"Who did?" asked Dick. "Maybe he would know what is wrong with Lucy."

"Never mind who he was," replied Warrington rather hurriedly. "He don't know any more about chickens than I do, and I don't know as much as Millie does, and that is less than any human being ought to know about anything. Anyhow Millie has been worrying the hen, and your mother and me, as well as herself, and instead of making any money she's making us all sick. I can't even see an egg without shuddering. First we rigged up a contraption for a henhouse that is a marvel to look upon and we moved Rollo and Lucy (that's their names), into their flat, furnished complete, and then every day for a week Millie took a basket out to bring in the eggs, coming back empty handed each time. We were all disappointed. The man I bought those loafers from said they were great layers and we confidently expected half a dozen or so eggs every day, but Lucy refused to attend to business. Finally she changed her mind and gave us one egg a day, which was better than none, but not near enough for practical purposes or money making. But it was somewhat encouraging and Millie said that as soon as she had a little more practice Lucy would probably give us all the eggs we could use. But nothing Millie could do induced the bird to change her speed. Every now and then she forgot and missed a day, which snowed me her machinery wasn't running right, but there was nothing we could do."

"After about three weeks we had saved up fifteen eggs and then Lucy got mad about something and refused to get off the nest. We thought maybe she was hurt, or sick, or had rheumatism, or felt blue because we had taken her eggs away from her. She would put up a fight every time we tried to poke her off the nest to look for another egg. I called in a veterinary and he said Lucy was in a family mood and wanted to set. So we gave her back her fifteen eggs and she seemed perfectly contented. Millie tended her night and day, as though she expected those eggs to hatch out diamonds. That fool hen roosted over those eggs nearly a month, until we all had nervous prostration, and at that she made a failure of five of them. But it was a big day for us when she cracked the shells and brought out the chicks. Our back fence was a regular gallery of interested youngsters watching Lucy digging fishing worms for her brood. 'Ducks' they called them."

"The five eggs that were neglected we thought looked as good as the rest; and as Luck positively refused to do anything more with them, thinking that ten chicks in the oper were worth more than five in the shell, I suppose, we brought them up in the house and kept them under the kitchen range for another week. Millie was sure they'd hatch if we gave them time. At last we decided to crack the shells and let the chicks out. I tapped one with the poker and it exploded like a bomb, and we all adjourned to the outside in a hurry to get a breath of pure air. The air in the kitchen seemed contaminated, or decomposed to some extent. After a while we ventured in, and got the other four out of the house and into the garbage can with no mishaps. There might have been chickens in them, but I was willing to trust to Lucy's judgment."

"But those chicks did grow amazingly. They lost their fur after a bit, and ran around half-naked for a couple of weeks."

Then they feathered out and began to look so dignified that Millie began to look for eggs. They seemed plenty big enough to lay eggs, and they had enough to eat. They had nests to lay in. They had everything, but they absolutely refused to lay eggs. Millie worried and worked, but it done no good. She's coaxed them, run them around the yard to make them exercise, done everything to them that one ought to do to a chicken, but nothing doing. Millie is in the dumps, and says she will not leave the place until those birds get on the job, and turn out some eggs."

Warrington looked dubiously at young Hargrave and mopped his brow.

"Do you think of anything to make those birds lay eggs, Dick?" he asked.

"You might give 'em some egg-nog to drink," he volunteered. "I've heard that eggs needed moisture."

"Never mind the chickens," broke in Mrs. Warrington. "Do something to get Millie away from those tormenting things for a few days. Take her out to Brownleigh's week-end party tomorrow, can't you Dick?"

"I'm just eager for the chance," declared Dick, and set out to lay his plans before Millie.

Now Millie was very fond of Dick, and also fond of week-end parties, especially at Brownleigh's. But she had a most perverse spirit of stubbornness in her make-up, and she declared with grim determination that under no circumstances would she stir a step until those chickens laid eggs. In vain did Dick plead, expostulate and scold. A woman may change her mind, if she wants to, but no mere man can induce her to change it, if she does not want to; and Millie didn't want to, and she didn't. And Dick Hargrave, used to having his own way, began to lay a plot. He was seen to enter a grocery store on his way home, carrying a small oblong carton very carefully.

After dinner that night, Mr. Warrington suddenly laid down his paper, slapped his thigh vigorously, nodded his head several times, and slipped quietly out, and in a short space of time was seen coming from a corner grocery with a small, oblong carton very similar to the one Dick Hargrave had procured.

As soon as Warrington had left the house, Mrs. Warrington, bent on a secret plan that had been forming in her own mind, surreptitiously entered the pantry, and taking a small basket therefrom, slipped out of the back door and was gone about five minutes.

The next morning Millie went out to feed her chickens, as usual, but a most unusual sight met her eyes. Every nest had eggs in it—some large, some small, some white, some brown and some speckled. With a little cry of pleasure, she pounced on them eagerly. One by one she picked them out and with shining eyes examined each as though it had been the first egg she ever saw. As she put them in the basket she counted them and to her intense gratification and delight she found she had an even thirty.

"You darling biddies," enthused Millie, "I knew you would do something like this for me. Three eggs apiece! That is certainly splendid. You have beaten your old mother, who probably wasn't raised right, as she never done better than one egg a day. You have made a wonderful beginning, and there's no telling what you can do after you get used to your new work."

Then, taking her basket in one hand and picking up her skirts with the other, she fairly flew to the house.

"There!" she said exultantly, the pride of victory making her tones vibrant. "Laugh at my hens now, will you. Three eggs apiece! Now I can go to the week-end party with Dick." And placing the basket on the kitchen table, she executed a little dance about the room that under any other circumstances could have been considered rather indecorous. But Mr. and Mrs. Warrington were looking at each other with astonishment, guilt and mistrust ludicrously mingled in their faces. But they recovered their composure before Millie did, and that young lady was far too excited to notice.

Dick Hargrave jumped eagerly for the telephone when it rang rigorously a few moments before he was ready to leave for his office and placed the receiver to his ear with a smile of expectancy on his face, which widened perceptibly as he heard Millie's eager voice, and then abruptly gave way to a look of downright wonder. He finally gasped as the words came rushing over the wire. Then a look of understanding dawned in his eyes, the smile returned, and developed so rapidly it choked him.

"Fine! Wonderful! Great! Those birds are cokers! I'll be over as soon as I get away from the office to see them," he said, when he recovered enough breath to talk with and Millie had lost hers.

Dick duly admired the eggs, looked suspiciously at Mr. and Mrs. Warrington, who in turn looked sheepishly suspicious at him. By common consent each mentally decided never under any circumstances to say a word about it. Millie was to happy to notice anything, and hastened to put on her prettiest gown for the week-end visit. Before she left she gave at least a thousand injunctions as to caring for the chickens and gathering the thirty or more eggs she knew would be laid each day.

The next day Mr. Warrington saw some of the birds doing strange stunts on top of the fence, flapping wings, and emitting

raucous noises. He looked at them in wonderment, then grew suspicious. He called Mrs. Warrington to the door and together they watched the performances.

"Why, they're going to crow like Rollo does," was Mrs. Warrington's excited comment.

"Exactly," said Warrington drily, "and in my humble opinion every one of those confounded birds are roosters."

"How funny!" exclaimed his wife.

"What's funny about it?" demanded her liege lord. Those fools may have laid thirty eggs last night, but I reckon that is their limit. They'll never lay any more, and what are we going to do about it when Millie returns?"

They were still debating this perplexing problem when the telephone rang. It was Dick, and he informed them that right at that moment he was the happiest man in the world, and expected to be so ever after. He had taken advantage of Millie's joy, proposed, been accepted and they were going to be married in the afternoon and were then off for two weeks in the hills of New Hampshire.

"God bless you, my boy," said Warrington, "you have taken a lot of trouble off our hands."

"What's that?" asked Dick in surprise.

"Oh, go to thunder, Dick. I'll tell you all about it when you and Millie come back."

Be good, now, and be happy," and he snapped up the receiver and broke the news to his wife.

The next day those wonderful layers disappeared. A few days later a letter from Millie gave them great relief, for she said Dick was not at all in favor of raising hens, and so she had decided not to keep chickens herself, but that she would give her wonderful flock to them.

Today Mrs. Dick Hargrave knows more about chickens than she did formerly, and she blushes fiery red and looks suspiciously at Dick and her father whenever they try to get her to relate to visitors the story of her venture in poultry-keeping, and her record-laying flock. Then they laugh uproariously, and she remarks with some asperity that she sees nothing to laugh at if they do.

Difference in Tone

"Her dog and her husband have the same name. I don't see how she can call one without calling the other."

"That's easy, for she always speaks kindly to the dog."

There Are Others

Blushing Maiden—Oh, sir, catch that man. He wants to kiss me.

Cop—Let him go. He's not the only fool in the world. There'll be another.

Happy Evenings 'Round the Rayo Lamp

The circle 'round the center table flooded with soft, mellow, yet brilliant light that allows the family to read, embroider, sew and study all through the long winter evenings.

RAYO LAMPS give a clear, steady, restful light, without glare or flicker, smoke or odor. For the light that is next best to daylight, that saves the eyes and prevents eye strain, as well as to give the family pleasure and comfort, get a RAYO Lamp for the reading table.

Given—Bicycles for Boys and Girls

We have a dandy, fine, new latest model bicycle for every boy and girl who answers this advertisement. If you want a bicycle, send the "Bicycle Man" your name and address and see how easy it is.

The bicycle that we are going to give you is the newest thing out as you can plainly see from the picture. These bicycles are beauties, and we have them in all sizes for either boy's or girl's use.

"The Juvenile DeLuxe"

The frame is a new model, new style and entirely different from the ordinary bicycle. The frame is one inch cold drawn seamless, steel, tubing, doubly reinforced and braced at all joints. The wheels have nickel, anti-rust, wire spokes and fancy rims enameled to match the frame; hubs finished in highly polished nickel; tempered cups, cones and bearings; extra strong feather weight mud guards with steel braces and splashers. The chain is the celebrated twin rivet, roller type, the latest and best. The saddle is easy riding with carbon steel rear coil springs. The pedals are the regular English rat-trap. The handle bars are adjustable. The wheels are equipped with guaranteed single tube, puncture proof tires. The painting or finish is enameled with Sunburst Vermillion red, head and seat mast hand polished. This bicycle is also equipped with the latest model coaster brake, which gives absolute control on hills or in stopping the machine quickly. All bright parts are triple nickel plated and highly polished. With each bicycle we give a kit of tools with leather bag, wrench, oil can and pump. This bicycle is built on the same lines as the highest priced bicycles made and is dependable in every way. These bicycles are backed with a five year guarantee by the manufacturers and any part or piece of them that is defective will be replaced. You will find this bicycle superior in any respect or equal to any machine made.

Send Your Name Today Every boy and girl wants a bicycle and here is your chance. We give these bicycles away to boys and girls who are willing to do us a favor now and then. We are not asking any money for them. If you want one, just send us your name and say, "I want a bicycle." We will know right away what you mean. Our motto is—"A bicycle for every boy and girl," and we mean every word of it. Here is your chance. Just send your name today—do it quickly and address—

Adjustable Leather Taps

Make My "Steels" INDISPENSABLE

To Every Man and Boy for Every Purpose

"Steels" mean all-day comfort to Every Man or Boy. Can be worn from sun-up to sun-down.

"Steels" do not absorb barnyard or stable filth and odors. Easy to wear—Easy to clean.

"Steels" protect the Man or Boy who can't pick his steps—make him tireless and sure-footed.

"Steels" keep the feet dry and comfortable in all weathers—Protect the Health the year 'round.

"Steels with Adjustable Leather Taps can be worn at all times and places. They do not sweat the feet.

Health, Comfort and Economy Demand That You Wear "Steels"

The Lightest—and Only Absolutely Waterproof—Workshoe

The World's Greatest Workshoe

Twelve years of untiring effort and the expenditure of a Fortune have enabled me to produce a workshoe that surpasses all others for Comfort, Lightness, Protection, Practicability, Service and Economy—Absolutely Waterproof under all conditions—in all seasons—from season to season—for town or country.

It cost more than a half million in cash to bring My "Steels" to their present perfection and make this offer and announcement to you today. I recently

spent one hundred thousand dollars to improve my "Steels"—make them more comfortable—improving every part of the shoe—and to increase my capacity to meet the tremendously increased demand. My latest TRIUMPH Adjustable Leather Taps—make my "Steels" the Only Practical General Purpose Workshoe.

Saved Millions for Workers

My "Steels" have saved to workers more than twenty million in shoe expenses alone, and many millions more in doctor and drug bills—in loss of time from sickness or bad weather—because no man or boy need fear to wear my "Steels" in the roughest storm—summer of winter—rain, snow, sleet, slush or mud.

Now, My "Steels" will save countless Millions more for the men and boys who see this advertisement—who will wear my "Steels."

My Steels—Best Health Insurance

Here is the only all-the-year-around workshoe ever invented. The shoe for every season—Cool in Summer—Warm in Winter—Dry and Shapely—always. They never

Harden nor Waterlog, Scald the Feet, Warp, Twist or Leak.

My "Steels" absolutely protect the wearer from Rheumatism, Lumbago, Sciatica, Coughs, Sore Throat and other "wet-foot troubles."

My "Steels" are Foot-form fitting—always keep their original shape. The Steel Sole is a Natural Arch Support, Nothing to Rub or Chafe, Sure prevention and relief for Corns, Bunions, Callouses, Chilblains, and all Foot Discomforts.

My "Steels" are altogether the Best Investment you can make, Best for your Health—Best for your Comfort—Best for your Pocketbook.

Leather-Tapped "Steels"—My Masterpiece

The adjustable Taps of my New Model "Steels" are of firm, solid, special Process Leather, firmly attached to the wonderful sole of thin, wear-resisting, springy steel that has made my "Steels" the World's Greatest Workshoe.

Leather Taps Instantly Replaced

Then, when worn, the Leather Taps are Instantly Removed—Instantly Replaced by anyone—at home. The cost of New Taps is small—but 40c. for a full set of better-wearing, more solid leather than is ever put into the best all-leather workshoes. They last three times as long as any other taps.

The Ideal General Service Workshoe

Here—At Last—is the Ideal Shoe for every Man or Boy. Not alone for the Farmer—not alone for the Dairy, Stock or Creamery Man—the Fruit or Vegetable Grower—but for Everyone who Works or Plays—Indoors or Out—in City, Town, Village or Hamlet—Forest or Field or Range or Road or Pavement—on Mountain or Plain—in Factory or Mine—for Mechanic, Laborer, Soldier, Shopman, Sportsman—for every Man who Does Things—for Every Worker.

My "Steels" stand Alone—Supreme—the Greatest and Best General Service Workshoe the World has ever seen.

"Steels" in All Sizes for Men and Boys

"Steels" run in same sizes as ordinary leather shoes and rubber boots—and in all heights. Sizes for Men 5 to 12—6, 9, 12 or 16 inches high. For Boys, Sizes 1 to 4—6 or 9 inches high.

"Steels" For Boys

The Easy, Light, Comfortable, Waterproof, Healthy Shoe for Boys. The "Knock-about" Shoe—the Sensible, Long-wearing Shoe. The Greatest School—the Greatest Play Shoe—the Greatest All-around Shoe for REAL BOYS. No more Wet Feet. No more hot, heavy "arctics" or rubber boots. No more danger of colds or Sickness. Keep your feet "powder dry" in any kind of wet, damp, sloppy, snowy weather. My "Steels" are best to SHAPE YOUNG FEET and avoid the foot-troubles of later life. Show this to Mother! She knows what's best for you. "Steels" will save her hours of worry.

This Book FREE

Let me send this book to you by mail, postpaid. Read it and learn more of this great shoe with the sole of steel—the shoe with the light, springy, airy "step"—the shoe that rests your foot naturally and comfortably—always holding its perfect shape—never a "run-down" heel, broken arch, warped sole, worn toe, twisted uppers, or cracks or leaks. Before you think of buying a pair of work shoes, get this great book of shoe facts and learn about this wonderful, foot saving sole of seamless steel. Do not think of turning this page until you have sent for this free book.

You Must Try My "Steels"

You cannot begin to realize the True Value of my "Steels"—you cannot know the height of Shoe Comfort, Economy and Protection—until you try and wear my "Steels."

You know, and I know, that the day of the Leather Workshoe is passing—that you must find something better—more Comfortable—more Lasting—more Economical—that leather workshoes are getting lower in quality and higher in price every year—that cheap workshoes are cheaply made—that even the most expensive will not last one full season.

My "Steels" are higher in grade and lower in price than any other workshoe—three to five times better value for less money.

Try "Steels" Ten Days at My Risk

I have spent a Fortune to MAKE GOOD every claim and every statement made for my "Steels." You cannot prove their worth to you unless you try my "Steels." You cannot profit by my years of effort if you lay aside this paper before writing to me.

I do not ask you to take my word nor the unstinted praise of the Million wearers of my "Steels." I'm Asking you to TAKE YOUR OWN JUDGMENT—the evidence of your own Senses.

Just TRY my "Steels"—just send the Coupon or a postal—ask for my FREE BOOK—ask for FREE DEMONSTRATION—FREE TEN-DAY TRY-ON—in your own home—on YOUR OWN FEET.

DON'T lay this paper aside until you have done what I ask—for your own good—for the sake of your Health and General Prosperity. You already know my reputation—ask any Banker, any Express Company or the Publisher of this Paper—they'll tell you I am absolutely reliable.

Does This Remind You?

The Mission of this paper is to give farmers a balanced education---as much on marketing as on producing---and to help them to get more money for their crops

You Be the Judge

WHEN you ride a Lewis Six, then, and then only, will you appreciate how much automobile \$1600 will buy. You will understand what perfect balance, an extra long wheel base and ample spring surface mean to both driver and passenger.

When you drive a Lewis Six you will understand what 1200 fewer parts and mechanical simplicity mean in the way of low up-keep and silent power. The

LEWIS "VI"

Monarch of the Sixes

does its work quietly and with ease—no matter how steep the hill, how deep the sand or how great the speed, you always feel that you have **power left in reserve.**

Two cents will bring you a catalog and tell you the name of a man who will take you for a ride in a Lewis Six—then you'll understand.

SPECIFICATIONS

Wheel base 135 inches—short turning radius.
Speed without shift—2 to 60 miles per hour.
Long stroke six cylinder monobloc motor ($3\frac{1}{2} \times 6$) assuring continuous perfect alignment of crank shaft.
Weight 3250 pounds carried low. This, with even distribution of weight, assures great tire economy.
Silk mohair top built streamline to harmonize with body. Nickel trimmings prepared against rust and tarnishing. Deep luxurious upholstery—hand buffed leather. Big 22-inch doors.
Spark and throttle on top of steering wheel. Foot accelerator also furnished.

Full floating rear axle—road clearance 11 inches.
Demountable rims (one extra). Oversize tires.
Gasoline tank in rear—absolutely accessible, avoiding spilling gasoline in front of car.
Vacuum gasoline feed with auxiliary supply which can be used only by turning valve.
Electric starter. Electric lights. Electric horn concealed under hood.
Left hand drive—rain vision windshield.
Underslung rear spring giving perfect riding qualities, without necessitating shock absorbers.
True streamline body (French). 16 to 18 miles on one gallon of gasoline.

The Lewis Six on exhibition at the Wisconsin, Minnesota and Illinois State Fairs. It will pay you to send for catalog today and see the car at the Fair later.

L. P. C. MOTOR COMPANY, ²¹¹ Petard St., Racine, Wis.

Smile Awhile

Hadn't Paid Much

Old Lady—You can't cheat me, sir. I know you fellows, I've not rid in cabs twenty years for nothing.

Cabby—Maby not ma'am, but you've come as close to it as you could.

It Stuck to Him

"That speaker has a high-pitched voice, beautiful curves to his sentences, and a quick delivery."

"Yes, he used to be a baseball pitcher."

She Must Have Enjoyed It

Husband—How did you enjoy the play this evening?

Wife—The best ever. I cried nearly all the time, and my handkerchief is wet from wiping my eyes.

Sorry For Him

"Have you heard what terrible misfortune has happened to our dear friend Algy?"

"No. What is the matter?"

"He has run away with my wife. Poor fellow, he don't know her as well as I do."

Cheap Service

"I tell you I believe in education. I have a college graduate for a cook."

"I don't see how you can afford that. Don't you have to pay her mighty high wages?"

"Only her board and clothes."

"I don't understand how you could get a graduate cook that way."

"I married her."

Cure by Suggestion

"I know of one cure by suggestion. Jorgans had insomnia—couldn't sleep a wink, and his wife suggested that since he could not sleep he'd just as well sit up and tend to the baby. Since then he has slept like a log."

So It Won't Hold Much

Mrs. Fillit—I guess it is true that the road to a man's heart is through his stomach.

Mr. Fillit—Yes, and most of you want it to be an awful short road.

More Than She Appreciated

"Mrs. Blease won't speak to me any more."

"What made her mad?"

"I don't know. We were talking and she said she made it a business to kiss her husband three times a day, and I said I knew at least a dozen women that did the same thing and she nearly had a fit."

Tit for Tat

"I never can believe anything that woman says."

"That is exactly what she said about you yesterday."

"Don't you see? How can you believe anybody that talks that way about her neighbors?"

For Her Own Use

Aunt Lucy—So your sister took those cigarettes away from you, did she? I'm glad she did.

Little Horace—Yes, she always swipes everything of mine that she wants to use herself.

All Things Are Not Rising

Wife—These are terrible times, everything is getting so high.

Husband—No, not everything. There is my opinion of you, and the neighbors' opinion of both of us. There are no higher now than they were a long time ago.

Wanted to Be Spoken Of

"There is not a word of truth in the statement that I am engaged," said the Washington City girl, "but I'm awful glad it's reported. See?"

Not Too Suddenly

"Did they allow the poor girl to bury her past?"

"Not until the busybodies held an inquest."

Better Quit It

"It is strange how harmful one person's health is to another."

"What do you mean?"

"Don't you know how dangerous it is to drink other people's health?"

No Time to Talk of Others

"I've never heard him say a bad word of anybody."

"No, he's too busy saying good words of himself."

Didn't Talk Back

"Stranger, you've been listening at that phone for half an hour and haven't said a word."

"No, sir, I'm talking with my wife."

Glad of One Thing

"I'm in awful luck, Mr. Goody. I need some money the worst ever, and I haven't the least idea where I can get it."

"I'm glad of that, Mr. Pincher, for I was afraid you had an idea you could get it from me."

The Only Way to Do It

"If ye want to smoke here," said the Irish policeman, "ye'll have to put out your cigar or go somewhere else."

Concrete Conveniences in and About the House

WE WILL start with the kitchen.

If you have trouble with your floor keeping it clean, make a mortar of one part cement, two parts coarse, gritty sand, two parts sawdust. This is known as "pulp concrete." Mix all thoroughly when dry. Clean your floor and sprinkle it with water until it is swelled. Then mix dry pulp concrete with sufficient water so it will flow well under the trowel and spread readily, and put it down about two inches thick over the old floor. Strike off with a straight-edge then smooth over with a trowel. Let stand four or five days, sprinkling each day, and you have a first-class, water-proof, easily cleaned floor for your kitchen, which will last indefinitely, and into which you may drive small nails for any purpose. This is known as pulp concrete flooring.

For side tables in the kitchen nail strips around edges two inches above table tops and fill with the same mixture used for the floor. Trowel smooth and you have a sanitary, satisfactory table which you would not be without for any money after you have used it for a while.

If you have several galvanized buckets around the house whose bottoms are leaky, take about three-fourths pint of cement and one pint of sand and mix together dry with your hand. Then add water in this same bucket and with the hand mix to the consistency of cream. Shake your bucket a little until the mortar settles good and set aside for two or three days, then you have a new bucket which will not easily turn over and one even better than when it was new.

Go to your smoke-house, clean it out, mix one part cement to two and one-half parts sand, dry, together, add your water and mix to consistency of cream and spread over the entire floor about three inches thick and smooth over with a wooden float and you will have the best smoke-house floor you ever saw. When you put this floor down run a piece of one and one-half inch pipe from inside to outside of smoke-house and use a wooden plug in it. Then you may dash several buckets of water over the floor and then with an old broom slosh it around, clean your floor and drain through the pipe, rendering it spotless and sanitary.

You want a pig trough. Take the old trough, turn it bottom upwards in a frame high enough to come two inches above bottom of old trough.

Mix one part cement, two parts sand dry, then add water to consistency of cream and fill the form, jostling and shaking to make it settle. Let stand 48 hours, remove your outside frame, then turn it over and withdraw your old trough and let stand about ten days. You have something to suit the pigs as well as yourself, as the pigs won't turn this over. It will not rot and is sanitary and satisfying.

Your chicken trough can be made in the same way, also your stock troughs. I made one some weeks ago which holds 200 gallons of water.

For stock tanks make a bottomless form the exact size you want the tank to be inside when moulded. Next make a duplicate form four inches larger all around. Place your largest and outside form on a level and hard piece of ground. Mix one part cement and two parts sand dry then add water and mix again and spread over the ground in the outside form about three inches thick, and you have the floor or bottom of your trough. Put your small form on the inside and fill around in all spaces; let stand 36 hours and remove your forms. This makes an ideal tank. These are some of the conveniences in and around the home. I could go right on with numbers of these conveniences, but will refrain till some later day.—C. E., Heathsville, Va.

A Garden Full of Flowers

for
\$1.00

DO YOU LOVE FLOWERS?

Everybody does, particularly the most beautiful ones of all that come early in the spring when the snow first disappears from the ground, and sometimes snow is on the ground while they are blooming.

There can be no failure from our bulbs. They are as sure to grow as potatoes stuck into the ground, have no insect pests and always bloom. Or plant in pots or boxes and raise them in the house for winter blooming. Directions sent with every order.

The following bulbs may be planted any time when the ground is unfrozen to the end of the year. They are all large size. No small or miniature bulbs sent out. "Satisfaction first and last" is our motto.

We deliver at prices quoted. Dozens or more may be made up of different colors. The colors will be packed separate.

HYACINTHS

For house or garden or lawn. Great spikes of showy flowers, the rage with flower lovers.

Single—Separate colors, red and rose, white, blue, and yellow. Each, 6 cents; dozen, 60 cents; twenty-five or more, 5 cents each.

Double—Separate colors, red or rose, white, blue, and yellow. Each, 6 cents; dozen, 60 cents; 25 or more, 5 cents each. Delivered at prices quoted.

TULIPS

The tulip is the popular early flower for the millions. The culture is so easy, the flowers so lovely, and the price so low that they ought to be grown by everybody who has a box of earth, a flower bed or garden, in country, town and city. Our tulip bulbs are all of our direct importation, large size and guaranteed.

Early Single—Separate colors, red varieties mixed, white varieties mixed, yellow varieties mixed and rose varieties mixed. Each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; \$1.25 per 100.

Early Double—In fine mixture, each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; per 100, \$1.25.

Duc von Tholl, varieties. The earliest red and yellow; each, 5 cents; dozen, 25 cents; per 100 \$1.50.

Parrot Tulips—Magnificent, large, showy flowers. Will last several days after cutting. Mixed colors. Each, 5 cents; dozen, 25 cents; twenty-five for 50c; per 100, \$1.50. Delivered at prices quoted.

NARCISSUS

For house or open ground. Almost no trouble to plant. No failure and great pleasure and satisfaction attend the growth of narcissus.

Single—Large trumpet varieties mixed. Yellow, white and bicolored. Each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; per 100, \$1.25.

Double—Mixed, all colors. Each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; per 100, \$1.25.

Poeticus—The best late flowering. Mixed colors and shades. Each, 5 cents; dozen, 20 cents; twenty-five for 30 cents; per 100, \$1.00.

Paper White—The best for growing in the house. Can be potted or grown in water in a dish. Simply put the bulbs in a dish and cover with water and keep in a sunny place and warm. In a short time your reward will be a mass of beautiful white, fragrant blooms. Fill the dish with bulbs, except enough space between to anchor by placing stones or broken china, etc., to keep from falling over. Each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; per 100, \$1.25. Delivered at prices quoted.

JONQUILS

Bright yellow, fragrant flowers. Mixed single and double. Two for 5 cents; dozen, 15 cents; twenty-five for 25 cents; per 100, 75 cents.

CROCUS

The first flowers to bloom in the spring in the open ground. Once planted, they will come up and bloom spring after spring. They should be planted on the lawn in the grass. Mixed colors, two for 5 cents; dozen, 15 cents; twenty-five for 25 cents; per 100, 75 cents.

Mammoth Yellow—Two for 5 cents; dozen, 20 cents; twenty-five for 30 cents; per 100, \$1.00. Delivered at prices quoted.

IRIS

Extremely popular. Any lawn or garden that has not a bed or border of iris should not put off planting another year. Once planted, they last always and multiply rapidly. A few bulbs planted now will multiply to hundreds in a couple of years, and larger plantings can then be made.

English Mixed—Each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; per 100, \$1.25.

Spanish Mixed—Each, 5 cents; dozen, 25 cents; twenty-five for 40 cents; per 100, \$1.25. Delivered at prices quoted.

CHINESE SACRED LILY

The Chinese Sacred Lily (Narcissus Orientalis), Joss Flower, or Flower of the Gods, is the variety grown by the Chinamen for decorating their temples or joss houses on their New Year's day, which occurs in February. They can readily be brought into bloom by any one if planted in early November, by Christmas: also can be planted any time, fall and winter. Pure white flowers, with lemon or orange cup, excessively fragrant; one plant will scent an ordinary home if doors are left open. A popular way to grow is to plant in water, same as recommended for Paper White Narcissus. Each, 10 cents; six for 50 cents; dozen, \$1.00. Delivered at prices quoted.

COLLECTIONS

For \$1

we will pack and deliver, with instructions for planting and cultivation, the following: Two large bulbs, Chinese Sacred Lily, three single hyacinths, two double hyacinths, twelve tulips, different colors; six narcissus, single and double; five paper white narcissus, ten jonquils, five iris—fifty-five choice bulbs—all for \$1.00, delivered to your postoffice.

Or, we will send for \$1.00: Two large bulbs Chinese sacred lily, four single hyacinths, four double hyacinths, ten single tulips, ten double tulips, one single narcissus, and ten double narcissus—fifty bulbs, sufficient to make a whole winter's display in the house or a fine bed for spring, all for \$1.00, postpaid.

Or, we will send seventy-five mixed-variety tulip bulbs, all large bulbs and sure to bloom, for \$1.00.

All collections are delivered at the prices.

What We Want You to Know and Why

Being a Few Words on Particular Matters

Clear the Farm of the Fly Pest

Probably the best way to "swat the fly" is to prevent there being any flies to swat. It is well known that the chief breeding places of flies is the manure pile. Here the eggs are laid, the maggots hatched, and the flies developed. A simple but efficient preventive is to sprinkle ordinary borax over manure and garbage piles, at the rate of ten ounces to eight bushels of manure, or two ounces to the can of garbage. This quantity will destroy the eggs of the fly, but will not impair the fertilizing value of the manure nor injure the feeding qualities of the garbage if fed to hogs or chickens. More than the quantity stated should not be used.

Crop Statistics of the Department of Agriculture

The last United States Department of Agriculture's bulletin gives a general review of crop conditions on September 1. Compared with a year ago, we have produced more of the following: Winter wheat, corn, barley, rye, buckwheat, Irish potatoes, hay and apples. We have produced less of spring wheat, oats, sweet potatoes, tobacco, flax, rice and sugar beets. The average of crop prices on the farm is nearly 4 per cent higher than one year ago. The price paid for meat animals was \$7.63 per hundred pounds, as compared with \$7.20 a year ago, \$6.56 two years ago, and \$5.87 three years ago.

The average yield of wheat per acre for 1914 was 16.8 bushels, as compared with 14.7 bushels per acre average for the five years 1909-1913, and 11.1 bushels for 1866-1870. The average for 1914 is the highest ever recorded, exceeding that of 1912, the next highest, by nine-tenths of a bushel.

The Great Resources of the United States

This country can be wholly independent of all the rest of the world, if such a condition is forced upon us, and we should not suffer for either necessities or luxuries. We can "live at home and get our board at the same place." We have within our borders everything we need to use in the way of food, clothing, shelter and the tools of productive labor. We have nearly every variety of soil and climate. We raise two-thirds of the world's supply of corn, one-fifth of the wheat, one-fourth of the oats, over one-sixth of the cattle, three times as many hogs as Germany, over half the cotton, and 300,000,000 pounds of wool annually. (All these agricultural products could be vastly increased.) We produce 40 per cent of the world's coal, two-thirds of the petroleum, over two-fifths of the iron ore, more than half of the copper, one-fifth of the gold, and one-third of the silver and lead. And we have only one-sixteenth of the world's people. When we properly conserve and control our great resources, we shall be the world's greatest power.

Warning Against Cheap Loan Schemes

Now that rural credit has assumed considerable prominence, and there seems to be a widespread interest in the matter, an opportunity is offered to unprincipled promoters to devise new ways for muleting the needy farmers. Companies have been formed to promote so-called "cheap loans." They offer to lend money on good security at, say, 3 per cent interest—payment to be made in monthly instalments on the amortization plan. In one of the plans the borrower signs an application for such a loan. Upon receipt of this the company sends a document signed by the officers of the company, which, taken together with the application signed by the would-be borrower, constitutes a valid contract between the applicant and the company and the borrower is caught in a trap. He must begin paying on the loan at once, at the rate of \$10 per month per \$1,000 of the loan applied for. He hasn't received the money, nor does he know when he will receive it, but he must pay his \$10 per month until he gets it. This merely means that enough borrowers must pay in their \$10 each until a thousand dollars, in addition to expenses, have been paid in, and then the first applicant for \$1,000 may receive his loan, and so on down the line. Before falling in with any cheap loan scheme, take the papers to be signed to your lawyer, or send them to us. Such precaution may save you both trouble and money.

The Cotton Planters and Their Predicament

The south, with its property invested in its cotton crop, has been greatly exercised over conditions brought about by the European war. Prices for lint cotton are in danger of reaching rock bottom, because the war has stopped shipping and shut down foreign mills. The situation is so grave and covers so much territory, affects so many people, that it has become a national problem. The United States government has recognized it as such and seems to be anxious to do something to assist the cotton planters in preventing the sacrifice of their profits in the threatened low prices. One of the leading agricultural journals has been vehement in its exhortations to farmers, bankers and legislators to do something quickly for the relief of the southern planters in the present crisis. Its advice is to hold every possible pound and pool the sales on what can not be held. Such political and commercial leaders as Governor Colquitt of Texas, E. J. Glenny, president of the New Orleans Cotton Exchange; Editor Edmonds of the Baltimore Manufacturers Record; Harvie Jordan, president Southern Cotton Association; T. J. Hickman, president American Cotton Manufacturers' Association; E. J. Watson, president Southern Cotton Congress, and Editor W. T. Williams of the Cotton Record all agree that the thing to do is to warehouse and hold the cotton, if it can be done. Lewis W. Parker, one of the south's foremost manufacturers, has said: "Better sell 7,000,000 bales at 14 cents than 14,000,000 bales at 7 cents." The paper above referred to declares that everything depends on the farmers—whether or not they will meet together and act as they should.

Balanced Rations

The Mule

The mule, he's a funny sight,
He's made of ears and dynamite.
His heels is full of bricks and springs,
Tornadoes, battering rams and things.
He's fat as any poisoned pup;
It's jest his meanness swells him up;
He's always scheming 'round to do
The things you most don't want him to.

—Exchange.

Keep up a campaign against the rat;
but be careful how you put out poison.

Comfort is not a luxury; it is a necessity to a successful and happy life.

Three things the farmer should have faith in: himself, his farm, and his wife.

Climbing over obstacles is the way to get onward and upward, but it is no picnic.

How many farmers who have typewriters keep a carbon copy of every business letter they write? Every one should.

Those who are too busy to read, and study, and plan will always remain at the foot of the hill.

The most profitable present-day farms are those equipped with modern, labor-saving machinery.

Nine out of every ten "back-to-the-farm-ers" believe that they can soon get rich raising chickens.

Turn out to every public meeting in the neighborhood. Boost along the "get-together" spirit. It pays.

Opportunity, who knocks at every man's door, does not necessarily prove that "knocking" is always profitable to the knocker.

The gas engine is the hired hand that never gets tired, but will work overtime without complaining or quitting the job.

The waste going on around the average farm, if saved, would pay 6 per cent interest on the value of the farm. Stop the leaks.

Sometimes the best way to get out of a rut is to turn around and go in the opposite direction—a complete change of policy.

When finished with using the grain drill, see that it is housed safely, cleaned and oiled, so it will be in perfect condition next spring. If repairs will be needed, make them now.

Leading our readers to desire better things is the most important part of our work. But, then, we are just as ready to help them get what they want, after they get to wanting them.

If reading an advertisement sometimes inspires any member of the family with a new ambition, our reading matter will help them to attain it. There's inspiration in advertisements.

We get letters by the score saying that what the writers like about Up-to-Date Farming is that it fights for the rights of farmers in ALL things. But that is nothing more than every farm paper should do.

One thing that makes for satisfaction is to have a big variety of things to eat. Every farmer should give special attention to providing the cook with plenty. Poor food, or a too limited diet has played its part in making the boy sick of farm life.

Up-to-Date Methods Take the Lead

What Others Say and What We Think of It

"Good fortune comes only to him who works for it."—Kimball's Dairy Farmer. Oh, shucks! That may be justice, but it isn't fact.

"Get down to hard pan; find out what your trouble is, and remedy it."—Business Farmer. The trouble with many of us is that we are already down to hard pan and our troubles continue.

"The man responsible for the war committed a crime against every person in the world."—Farm and Fireside. And will probably suffer less for his crime than any other criminal in the world.

"On some products for which Chicago consumers are paying \$1, the amount reaching the grower is less than 15 cents."—The Farmers' Review. Somebody is robbing both Peter and Paul to pay himself.

"It is difficult for the average man to understand the logic of the big money interests."—Farm, Stock and Home. Not so; it is the most understandable logic in the world—"Heads we win, tails you lose;" that's all there is to it.

"Here is what it requires for one week's rations for the bodies of the German soldiers: Potatoes, 120,330,000 pounds; meat, 16,630,000 pounds; salt, 2,000,900 pounds."—The Gleaner. And France insists on adding 50,000,000 pounds of cold lead, more or less.

Every other government but ours protects the people from being swindled by men or firms who want to get rich quick at the expense of others."—Florida Growers' News. We're so busy creating wealth we haven't time to attend to saving a fair share of it for ourselves just now, but we will wake up, by and by. We're getting restless in our sleep right now.

"The highest type of county agent work is that which brings about the organization of the people into groups for a definite purpose and then sees that this purpose is accomplished."—Farm Management Monthly. We again recommend that one of the chief purposes should be to perfect a national system of controlled and directed marketing. Reader, help us drive this point home to your neighbors.

"There never was a better time for the young man or the renter to invest in a farm than right now. With the assurance that high prices for farm products will continue for many years to come, a man can feel that a farm venture will be a safe undertaking and that with good management he can make his investment pay big returns. The farm is no place for the nonproducer or the half-hearted producer. What is needed now more than ever in the world's history are farmers with intelligence and energy, farmers who will produce crops in greater quantities and at less cost."—Farm Engineering. All true, except that high prices are not assured by any means so long as speculators have it in their power to manipulate them.

A Strenuous Effort

WE REALIZE that the people of the United States are a thinking and a progressive people. They have high ideals, and they are willing to do whatever is reasonable to attain those ideals. They are patriotic, and they wish our government to be the greatest on earth—greatest in the independent prosperity of its people, in its exalted attainments, and in the equal rights and privileges, unbiased justice and fairness to all, reaching to the commonest level of the masses.

To attain these earnestly-sought results the masses must be informed as to what is being done everywhere and in every line of thought and action. It is an acknowledged fact that the partisan press is biased in the information it gives. In some cases it overdraws, in others it withholds facts, and in not a few it perverts the truth. We are not abusing the political and miscellaneous papers. They have their purpose and are zealously laboring to accomplish that purpose.

It is our knowledge of all these things that has prompted us during all the years of its existence to make UP-TO-DATE FARMING "a paper that is different." A long, intimate relationship with all classes of our better people has taught us what they need, and has inspired us with their own thought and purpose. A like familiarity with the press of the country has impressed

us with the important matters in which the papers come short or fail. This is what has led us to treat matters the general press ignores, and each year has enabled us to do that more and more. But we have never been satisfied, and we are not now. We enter the reading autumn season of 1914 with a greater determination than ever to make UP-TO-DATE FARMING a better paper than it has ever been before—better for the general reader as well as for the organized farmer. And we have better facilities for doing that than we ever had before. Also, it is a fact that transpiring events make the need of such a paper greater than at any previous period in our history. It can not be out of place, therefore, for us to ask our readers, our old friends and our new ones, all highly prized and greatly appreciated by us—to ask them all to consider these things. We are proud of what we have accomplished, of the change of sentiment we have seen in the minds of the people, of the efforts that have been made in accordance with our teaching, and the many great things that have been accomplished; but more can, and must, and will be done. Friends, stay with us and help us in this great work. The masses need our help and yours. We owe much of our success to you, and while we plan to do better things, help us to get the paper into every home in this great country. We are determined to do our part, and we believe you will do yours.

EDITORIAL

United States War Tax

THE TALK that has for some time almost filled the papers, the agitation in Congress and the enactment of laws there concerning and providing for a "war tax" in the United States must strike our readers as something rather strange, to say the least of it. The United States is at peace with all the world. Not a hostile cannon is posted anywhere; not a musket contains a hostile cartridge, and not a soldier is on the march in quest of an enemy. We are not engaged in any war and do not propose to be. Then why a war tax?

Things are not always what they seem. The United States government is short of money, and is liable to be more so. Its principal source of revenue is the tariff—import duties, taxes required to be paid for the privilege of importing various goods and commodities from other countries to this country. These import duties have been materially reduced by the present administration, and the opposing party naturally attributes present financial shortages to that reduction. But the great war in Europe interferes with imports. Goods on which duties are paid can not be brought to this country as heretofore, and, of course, the government fails to get the accustomed revenue. The deficiency must be raised in some other way. Hence the so-called war tax.

But the point we want to make is the necessity for more economic management. States and nation seem absolutely reckless in the expenditure of money. The present Congress, as we have shown in previous articles, does not for a moment hesitate to create means of expenditure that were never thought of before, and that it is difficult to find any need for. And current expenses are almost invariably in-

creased. We give below the appropriations made by Congress, with comparisons for the preceding year:

Agriculture	\$ 19,865,832	\$ 17,986,945
Army	101,019,212	94,266,145
Diplomatic and consular	4,309,856	3,730,642
District of Columbia	12,172,539	11,383,739
Fortification	5,627,700	5,218,250
Indian	9,771,902	9,486,819
Legislative, etc.	37,630,229	35,172,434
Military academy	997,899	1,099,302
Navy	144,865,716	140,800,643
Pensions	169,150,000	180,300,000
Postoffice	313,364,667	285,376,271
Sundry civil	110,070,227	116,795,327

Total \$928,848,783 \$901,616,520

It will be noted that the only items that show a reduction from the preceding year are the military academy, pensions and sundry civil. But to these expenditures must be added urgent deficiency, \$17,462,457, and deficiency for 1914 and prior years, \$5,901,128, and also a miscellaneous expenditure of \$6,000,000. All of which makes a grand total, regular and permanent annual appropriations, of \$1,089,408,777, which exceed those of 1913 by \$31,803,082.

We are a great country, but that is no excuse for making extravagant, unwise and unnecessary expenditures of money that carry with them no benefit to the public. As we have shown on other occasions, people scarcely realize what a billion dollars means. It is more dollars than there are seconds in thirty years! But we do not wish to be misunderstood. This is not the only billion-dollar Congress we have had. Those under other political control have expended as much as a billion—perhaps not so much above a billion as this—but we believe those who expend public money should be held responsible for the expenditures they make, and be required to show their necessity or their benefit to the public. In such case we would have less need for war taxes in time of peace.

Primary Elections

WE ARE aware that the greatest men of the nation have advocated primary elections to determine who the party candidates shall be, and the idea has been so popular that such elections have been practically demanded by the people. That popular demand, however, may have been somewhat weakened by results in various states that have held primaries this year.

Primary elections are public affairs, and they are expensive. They are paid for out of the general revenue, and every one who pays taxes must pay his or her portion of that expense. The object of such elections is not to choose public officers, but to determine who the candidates of the various political parties shall be. The ostensible purpose is to secure from each party its very best men for candidates. Of course, every party should run its best men, and each party should be held responsible if it fails to do that. But that is the party's business, and each party should determine that in its own way and at its own expense. There are many good people in the country who are not partisan at all. It is none of their business whom the political parties put up for their respective can-

didates, and they can not honorably vote in the primaries, but they are compelled to join in the payment of the expense.

Thus is the cost of choosing public officers doubled, unjust taxes are levied on non-partisan voters as well as on those who are not voters at all, and it is clear that results do not justify these heavy additional expenditures.

We believe sentiment regarding primary elections will change. Let the parties themselves determine whom their candidates shall be, and let it be done at the expense of the party itself; then in the election the voters have a right to vote for whom they please. If the parties have not placed their best men on their respective tickets, the voters can choose the best presented on the various tickets, and thus rebuke the parties that fail to present their best. The suicidal, boss-enforced idea that a party voter must vote the party ticket, no matter who the candidates are, is responsible for all our election evils, and for the fact that our state and national governments are too often boss-ruled. But results in several states this year prove that primary elections are but a poor remedy, though they double election expenses.

The "Buy-a-Bale" Movement

THE MERE announcement of the great European war ruined the cotton market in this country. Foreign factories that looked to America for supplies were paralyzed and did not dare to buy, even if their purchases could have been delivered, and there was

such a stunning business uncertainty that our home factories had no assurance to justify the purchase of cotton. This not only brought the prices down to ruinous figures, but it absolutely closed the cotton market.

To relieve the planters and possibly tide them over the terrible business

paralysis, enterprising and benevolent people in most of the cities and practically throughout the country, started what is called the "buy-a-bale" movement, which was that people north, south, east or west, in city, town or country, who were at all able to do so, would buy a bale of cotton, not for use but to be held as a safe representative of the money invested. This novel proposition met with such success that the cotton situation has been greatly relieved, and it shows the true patriotic and benevolent spirit of the American people—the real human brotherhood that prompts those not in distress to come to the relief of those who are, even though they must do unusual things and make sacrifices in order to do it.

Of course this is no remedy for the distressing market conditions that are so often forced upon the producers of various crops in this country. Take the apple crop of the present season. In some places there are none and in other portions of the country an apparently excessive crop. A St. Louis daily tells us that leading apple growers who have heretofore sold their crops to St. Louis and Chicago buyers at \$3 per barrel have no bidders at all now—absolutely no market price. Others are offered \$1 a barrel, and that will not pay the cost of picking, barreling and hauling to market, and the apples must go to waste.

This condition is not the result of the European war, nor is it because too many apples have been produced. A large portion of the people of the

United States have not an apple in reach, and these people would gladly buy them for use at reasonable prices if they had access to them. The demand is not supplied, and will not be, because the market buyers buy to sell again at the greatest possible profit for themselves. The greatest profit is in selling to the nearby demands, and these buyers know how many they can use in that way. That quantity is bought and stored, and the remainder is left in the orchards to rot, though people in easy access through a proper marketing system are entirely unsupplied.

Why not start a "buy-a-barrel" movement? Such a thing has been attempted, we are told, in Madison, Jersey, and Calhoun counties, Illinois. But such a movement can not be at all successful. It will have the unyielding opposition of the speculating buyers and stores, and apples are not permanent keepers like cotton. They must be stored properly if they keep at all. Hence they would be no security for the money invested in them except for storage or immediate use. The remedy, and the only remedy, is a different marketing system—a different system of storage and distribution, a system that will take every surplus at fair prices to the producers and that will find and supply every demand at fair prices to the users. It looks like such a proposition, backed by practical methods, ought to stimulate every man, woman and child of the country to the most strenuous activity.

In the East as Well as Elsewhere

MR. LIPMAN, director of the New Jersey agricultural experiment stations, has been studying the price and marketing problem in the east. He finds that farmers in many instances are selling fruits and vegetables at one-third to one-fourth the price the consumer in Philadelphia and New York pays for the same goods. He says modern farmers and the state and national agricultural bureaus have been so busy applying science to the growing of big crops that the problem of distributing these crops at a profit to the grower has been neglected, and he thinks it high time that attention be divided between growing and marketing.

As examples Dr. Lipman says farmers in Burlington county, New Jersey, are getting from 25 to 50 cents a bushel for tomatoes, while in Massachusetts such tomatoes are selling at \$3 a bushel. The New Jersey toma-

atoes, he says, could have been shipped to Massachusetts and sold at an increased profit to the grower and a great saving to the user. But the "big crop" teachers did not know that, or at least they did not tell the farmers about it. And like conditions prevail much nearer the growers than Massachusetts. Dr. Lipman says in the northern counties of New Jersey the users have been paying high prices for tomatoes that seventy-five miles away were so cheap many growers preferred to let them rot on the vines rather than market them at a loss.

The whole country is suffering from a bad system of distribution, a system that is purposely controlled in such a way as to compel growers to accept low prices or not sell, and to compel users to pay high prices or do without. It looks like the whole world would unite to knock out such a system. Don't it make the federation of farmers imperative and the co-operation of producers and consumers an absolute necessity?

The Same Old Story

A NEW YORK farm paper says: "The prices of meats have gone steadily up and we now know that the meat shortage is world-wide." But have the prices paid the farmers for meat stock gone steadily up? These prices are high, we agree, and the farmers do not wish them to be higher, but they do wish them to be reliable and steady, not going up or down according to the whims of the buyers or as scary tales may come to the market centers.

But why can not this great country raise enough meat to feed its people? We may answer, because agriculture is made uncertain by legislation and is kept uncertain by the failure of farmers to co-operate. Each farmer seems to persist in "hoeing his own row" and he knows and seems to care but little of what his fellow farmers are doing. If this were different, and each knew of the plans of the other, there would be much greater certainty in farming. It takes more than a season, and more

than a year, to bring meat animals to market, and the uncertainty of these years makes the farmers hesitate in beginning a product that must cover the years. They know that in the beginning the price is high and that each step under present conditions must be a costly one. The big question, therefore, is what will it bring at selling time? If the farmers were so organized, or so co-operated together, that they could have even a degree of assurance of the answer to this question, and if farm price were considered by the authorities so as to encourage rather than discourage farmers, results would be very different indeed. But the only thing that claims official attention is QUANTITY, with quality recently added, and the farmers personally feel themselves invited to a back seat. They do not care to take risks that cover years instead of seasons. Give them assurance of price and the fields will not only blossom as the rose, but the pastures will be made alive with meat-producing animals.

What About Sugar?

GREAT BRITAIN and the United States are the two greatest sugar importing countries in the world. American growers supply about one-half the sugar used in this country. Great Britain usually buys about 1,500,000 tons of sugar from Germany and Austria-Hungary, while the United States takes about all of the Cuban crop, amounting to over 2,000,000 tons a year.

The sugar output of the American planters has decreased somewhat, and the European war shuts off Britain's source of supply. Both the United States and Great Britain are in the market for the available sugar supplies, and the keen competition has already nearly doubled the price. It is quite probable that the present condition will greatly stimulate the production of sugar in this country, both cane and beet. The department of agriculture declares that this country could become entirely independent of the rest of the world, so far as sugar is concerned, and raise its own. Two hundred million acres planted to sugar beets, the department says, would accomplish it. There are nineteen states that have areas splendidly adapted to the growth of the sugar beet. These states are California, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, North Dakota, Ohio, South Dakota, Utah, Wisconsin, Wyoming. These states contain more than 2,000,000 farms and over 278,000,000 acres of improved lands. The department says:

If one farmer in four in these states were to plant a three-acre patch and give it the care that could readily be bestowed upon so small a plot it would be unnecessary for us to buy foreign sugar. Two-thirds of 1 per cent of the improved land in this area is all that would be required to accomplish this result. More than that acreage lies idle, absolutely unused, every year. Any one of the states of Illinois, Iowa, Kansas, Missouri, Minnesota, Nebraska, or Ohio could produce all this sugar and then have the beets occur only once in a ten-year rotation; several of the others could do it alone on a five-year rotation.

From this table it can be seen that devoting the proposed 2,000,000 acres to sugar-beet production would have an utterly insignificant effect in reducing the acreage of other crops. If they were grown in properly considered rotations with any of these crops except cotton and rice the effect of the beets in increasing the yield of the others would much more than counterbalance the acreage taken from the latter. All that is necessary, so far as acreage is concerned, in order to make us independent sugar producers, is to bring the crop to a parity with flax or rye.

Editorialettes

Punishing Frauds—The United States Department of Agriculture is finding the pure food law an effective weapon for curtailing, to an extent, at least, the foisting of fraudulent food and drug products on the public. A wine merchant who shipped imitation "cognac" under misleading statements was recently fined \$250. Another concern was fined \$100 and costs for shipping adulterated cheese from Missouri into Kansas. An oil company has been fined for shipping adulterated and misbranded spirits of turpentine from New York to Ohio. Well, eternal vigilance is the price of safety, it is said. And if this vigilance on the part of the pure food officials be honestly pursued we can be fairly safe in buying articles and in getting what we pay for.

Class Legislation—Not always is the term "class legislation" confined to legislation in favor of some greedy interests. Not infrequently some bill is prepared which instead of giving undue rights to any industry takes away its legitimate rights and deprives it of its rightful opportunities. It would seem that the Byrnes bill recently introduced in Congress, which in effect prohibits any insurance company from doing interstate business through the mails, is class legislation of this sort. If the business itself is

legitimate, there is no reason why it should not have every privilege and opportunity the facilities of our country can afford it. If it is not legitimate, lay the axe at the root of the evil. We have plenty of laws now to effectually prevent the use of the mails for fraudulent purposes. So long as life insurance is a legitimate business, there is no reason why it should not be sold by mail. "Equal rights to all" must also mean ALL our rights.

For Co-operators—"Co-operative Institutions Among Farmers" is the subject of Extension Series No. 8 just issued by the North Carolina state university at Chapel Hill. This series deals altogether with rural co-operation in Catawba county and gives some interesting facts regarding the organization and development of the creamery, Sweet Potato Growers' Association, the Farmers' Union Warehouse and the Rural Credit Association. Of-

ficials of local farmers' organizations desiring copies will be supplied through Dr. L. R. Wilson, director, Chapel Hill, N. C.

Bankers to Rescue—In a Mississippi town the bankers have announced their intention to take care of the farmers who market cotton in their town by advancing from \$30 to \$35 a bale on their cotton, accepting a demand note for the amount advanced, which notes will be carried by the banks for a year, if necessary, thus enabling the producer to realize something on his cotton even though the market does not open. The farmer will keep the cotton insured, and pay 8 per cent on the notes. This plan is better than no sale at any price and would possibly be an excellent thing if the cotton planters will be in position to hold for a fair price when the market does open. This is a point which should be carefully considered.

Slow Progress of Parcel Post—The parcel post, as we have frequently prophesied, has as yet had little effect in direct marketing. Reports from numerous postoffices show that the results have been somewhat disappointing to those who have expected much from it. In Boston up to May 24, offers had been received from 907 farmers and truckers to serve consumers by mail. In Baltimore 90 to 100 packages of farm produce have been handled daily. In St. Louis 4,164 packages of farm produce were handled in June and more than that in May. These figures do not indicate a very rapid growth of direct dealing between producer and consumer by means of the mails. Parcel post has brought the two classes together in some cases, but not generally. It has established some short and direct lines of trade, but it has not revolutionized anything, and will not in the near future.

Six-40
HUDSON
\$1,550

\$3,875,000
Paid Last Month
For Hudsons

That is what users paid dealers last month for this new-model HUDSON Six-40: that is, they paid weekly, on the average, \$930,000. They bought the limit of our output—100 cars per day—and urged us to build cars faster.

The World's Record Among Class Cars

That is the record demand for a quality car.

The HUDSON Six-40 now outsells any car in the world with a price above \$1,200.

HUDSON sales today are five times larger than last year at this time. Yet the HUDSON has long been a leading car. Such an increase as that—five-fold in one year—was never before made on a well-known car.

We trebled our output in July, when this 1915 model came out. But in 30 days we had 4,000 unfilled orders. Thousands of men—with other

cars plentiful—waited weeks for this HUDSON Six-40. No other car would do.

The Magic Model

You should see at once the new car which has wrought this magic. It has upset all the old ideals, and changed all former standards.

It is 1,000 pounds lighter than former cars of this size, yet never was a car more sturdy. A new-type motor saves about 30 per cent on fuel.

It brings out countless new attractions in beauty, comfort and convenience. And it costs you less than a class car ever before has cost.

The cars you know will seem crude in comparison. Go see the refinements which men so welcome in this new-day type of car.

Due to Howard E. Coffin

This new-model car is due to Howard E. Coffin, the famous HUDSON designer. He has always led in advances. In this HUDSON Six-40 he reaches his climax—his finished ideal of a car.

He has worked for four years to perfect it. All the 47 other HUDSON engineers have worked with him. Now every part and detail show their final touch. You will never want a finer, lighter, handsomer car than this.

Go see it. If it suits you, get your new car now. The 1915 models are out now, so you know what's coming. And this is touring time. You have leisure now, and the coming months are perfect. Don't miss them. Your dealer will get you prompt delivery, even if the car has to come by express. To make prompt deliveries we have already shipped almost 1,000 cars by express—an unprecedented thing.

Hudson dealers are everywhere.

October Fifteenth Feature Article

THERE is much that the wisest and most experienced farmer can learn concerning the corn plant and its uses which would be of no little value to him in making his corn crop a source of greater satisfaction to him. It would be well not only to know what corn is, as a chemical production, but also how it came to be what it is in shape, form, and composition. A knowledge of its past history, from a botanical standpoint will help one to understand its present condition, and its future possibilities. There are a great many interesting things about the corn plant which the average farmer knows little or nothing about; things which if he did know and understand, would not only make the improvement, production and feeding of the plant a much more profitable thing, but which would be so interesting that the farmer would take that great pleasure in his work in connection with his corn which would mean better crops and larger profits. Let us learn all we can about corn. If we knew it all, everything there is to know, we would know none too much, nor would we know anything we could not utilize in our work to advantage.

If every farmer could but realize the wonderful development that has been made in the corn plant, since it has been a matter of record as to what it was, he would not wonder at the earnest enthusiasm of those who are doing a great work in the further development of this king of all farm crops. It is believed that the corn plant was once nothing more than a coarse grass, and that the grains were once small, irregular seeds, covered with a chaff, much like wheat. It has been traced back to the time when each kernel on the cob, and small kernels and cobs they were, too, was enveloped in a husk, each to itself. As civilization has advanced, so have the products of civilization advanced in form, type, and usefulness. And it only remained for such a scientist as Luther Burbank to show how by intelligent treatment present-day civilization can produce an advance in the production of vegetable improvement in a few more years that it took the primitive peoples of past ages many generations to obtain. So the farmer who raises corn may pick up an ear from his crib and mentally compare it

Making the Most of the Corn Crop

THE CORN HARVESTER SAVES TIME, LABOR AND FEED

with its ancestors of 2,000 years ago. Then, if he can but realize that the greater part of this improvement has been made during the last two or three hundred years, and that we have only begun to wake up to the possibilities of plant breeding, he may well become intensely interested in learning and practicing the most advanced principles of plant breeding for improvement.

These suggestions are made to encourage each reader to take up the study of the corn plant. Become an expert; there is a great satisfaction in knowing things, aside from the profit one can obtain through the application of knowledge. And remember, all successes in every line of business come from being intensely and deeply interested in the work being done, and to such an extent that we leave no stone unturned in our efforts to gain and apply practical knowledge.

The corn crop of 1914 is now ready for harvest. What have we, anyhow, in the crop? What are the valuable elements in all parts of the plant—in the grain, the cob, the leaves, the stalk and the roots? And how can we

use all these materials to get the most value out of them, not merely temporary cash value, but the value that looks and reaches into the future. There is oil, and sugar, and fat, and starch, and muscle-forming elements in all parts of the plant. There are also, in these elements and their combination, fertilizing materials, and material that will make humus, that highly valuable soil constituent.

Can you analyze your corn crop, Sir Farmer, and tell how many pounds of each of these elements it contains; how much beef, pork, dairy and poultry products it should produce—how much you will receive per pound for it in these forms, compared to the price you would receive by selling the grain? And how much of the fertilizing elements would you lose in the different methods of utilizing or marketing the crop?

In this article no attempt will be made to answer these questions specifically, because to answer them comprehensively would require a treatise, not a single article limited to this space. The purpose in calling attention to them is to call attention to

the need of knowing these things, and so far as possible to stimulate desire and arouse ambition to know more, for knowledge and judgment are the two rules by which every man, farmers as well as others, must measure their worth to themselves and to civilization. Solomon knew what he was talking about when he advised us to get wisdom and understanding. Nothing worth while comes by any other routes. You, reader, may need to know many things about corn that possibly you did not know, before you will be able to grow the type, variety, yield, etc., and make the best use of it, that will mean most to you, to your children, if you have any, and to civilization as a whole, which owes you far less than you owe to it.

All this is for a mere beginning of a course of action that will reach far into the years to come; but what we are all particularly interested in just now, is not so much the crop that we may have five, ten or twenty years from now, and the use we will then be able to make of it, as it is the crop we have now on our hands, and the most profitable use we should be able to make of it. And even here, the writer makes no attempt at an exhaustive study—space would not permit; but some pertinent suggestions may be made that should help each reader to pursue a line of investigation which will lead him to profitable conclusions.

Some farmers will feed their entire crop; others will sell part and feed part; still others will sell all the crop, not having stock for feeding. Of the last class, some will sell as soon as the corn can be gathered, while others will hold part or all for sale later on. Each farmer in all these classifications will do what circumstances compel him to do, modified as far as he can modify them by his control over his circumstances. Each one has an individual problem of his own to work out.

In feeding, the best results will be obtained if the corn is made part of a properly-balanced ration. Even a balanced ration may not be economical, if it is not wisely chosen. Balanced rations may be made up of too expensive materials to be as profitable as a ration not so "balanced," but far more practical. Hogs must be fed differently from cattle; that is, the place corn occupies in the ration is different.

HUSKING STANDING CORN BY MACHINERY

Our Country Contributors

NOTICE TO READERS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used as follows: \$3.00 for the best articles \$2.00 for the second, and \$1.00 for the third best. All others, 50 cents each.

The Farmer of Tomorrow

(Awarded First Prize of \$3)

I S HE to be the same as we are today? No! He will be advanced if we give him a chance, and it is our duty as citizens of a progressing country to give him this chance, thereby putting him on the road to success, making his life on the farm enjoyable and making him a better citizen.

Farming has been looked upon as the profession for the most ignorant people of the nation, for those who could not make a living at anything else; but during the last few years it has been gradually pushing to the front. Now let us help it along by giving our boys and girls every chance. They need to be more systematic about their work, take better care of what they already have, make a dollar count one hundred cents, and last, yet first, learn how to market their produce to get more money themselves and save the consumer money on his daily bread.

How many of us work hard for ten hours every day and yet accomplish but a very little! Why is it? It is because we have no system; we do not go at it in a business-like way; we do things one day that should be left until the next and let something else that should be done on that day go, until it takes twice as long to do it as it would have done had we done it when we should.

How many of us take the best care possible of what we have? How many of us have money invested in land or something else that is not paying us a cent of profit because it is not being cultivated properly or not at all? The majority of us must say "I have."

How many of us know what feeds to feed an animal to produce the greatest number of pounds of fat or the greatest amount of milk? As a rule, we feed some kind of hay and some grain, but do not know whether the grain does the most good or not. Sometimes it does not because the ingredients of which it is composed are so near like those of which the hay is composed. As a result we are buying grain and feeding it and are getting little for it, where we should have bought some other kind of grain that would have supplied the other ingredients which were necessary to form a balanced ration with the hay.

How many of us knew how to market to get the largest profits before the Farmers Society of Equity was organized? Now this organization is a great blessing to the farmers if they know how to run it. In the past the ordinary farmer did not realize the advantage in employing a man who understands how to market at the salary he could get somewhere else, and even now the tendency is to get some one just as cheap as possible, even though he may be ignorant about the essentials of the business. I have noticed this to be the root of most of the failures of farmers' organizations, although they do fail for other reasons sometimes.

Now how under heaven are our boys and girls going to advance above our standard if we keep them on the farm with us summer and winter and keep them doing their work in our old-fashioned, poor and hard way, and for the prices others choose to offer them? They can not do it, and that is all

there is about it. We must give them every chance. This is your duty to your children, to the industry of farming, to the nation and to mankind, brother farmer. Now see to it that your boys and girls, the farmers of tomorrow; are in school, and that the business side of agriculture be taught to all.—J. Ward Green, McCammon, Idaho.

How We Helped Pay For the Farm

(Awarded Second Prize of \$2)

MY SISTER, aged 15, and myself, aged 17, were allowed to go to town high school by father, which, we knew, put him to extra expense and sacrifice, but we appreciated the opportunity, nevertheless, and determined to do our little part during vacation in the line of service some way. Knowing our farm was not clear of debt, we wanted to help, and tried to think of a good plan to earn money and we succeeded. Of course, we helped mother in the house,

and helped prepare for market day, but as produce was so plentiful, the market was overrun, so father was compelled to bring much of his fruit and vegetables home again unsold.

Staple articles, as, butter, milk and eggs, he had no trouble to dispose of, but the crops of beans, corn, tomatoes, apples, peaches, etc., were so heavy, the low prices they brought barely paid for the time and energy used in marketing them.

Hearing father talk thus one day, I suggested: "Father, if we had enough jars, I'd can these things by the wholesale. One never knows, a famine or drought might follow this time of plenty, and the preserved food would come in most handy."

"True, indeed," said he, and our decision was made.

He procured several hundred lots of jars from a manufacturer, also a great number of catsup bottles and jelly glasses. Sugar he got by the barrel. Sister and I went to work in earnest about July 1 and have had splendid success thus far.

We canned cherries, blackberries, huckleberries, beets, rhubarb, corn and even apple sauce. Then father made us a large temporary table for sun-drying and a neat frame, covered with mosquito netting to keep all flies away. There we dried cherries, corn, berries, beans, pears, peaches, peppers and apples by the bushel. Our jelly boiling, also grape butter and catsup cooking was a splendid experience. Mother guided us in instruction and seasoning and we did the work. Chow-chow and chili sauce are yet to be made. Mother cleared a room to give us a storing place. You would be surprised to see the amounts we've preserved, and sure enough, long before the season was ended, didn't sugar go up to such a high price that preserving by many families was greatly lessened and our goods are finding sale already. Father put an extra shelf on his market wagon on which he carries "Home-made preserves, dried and canned goods." By results thus far gained, we have added \$25 to our debt-paying fund and we have bright prospects of adding a greater amount by next spring.

Our jarred goods sell at 20 cents a jar (5 cents returned when empty jars are given back), jelly at 15 cents a glass (5 cents returned if the glass is given back). Dried fruit sells at store prices. Grape butter is not yet on the market. School has now begun and we are very happy with our studies and with the feeling of having helped father a bit during vacation. L. C. C., Plainfield, N. J.

How the Advertising Benefits You

Of course the advertising helps you when it acquaints you with a new machine or any article that will save you work or make you money or add to your comfort. It also gives you a bigger UP-TO-DATE. For every extra column of advertising we add more than a column of reading. Patronize our advertisers, then your dealer, by buying the things advertised in UP-TO-DATE and by sending direct to the advertiser by mail. Such help from every reader will soon allow us to double the size of your paper.

Our Advertisers Are Guaranteed

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Owning a Home Through Difficulties

(Awarded Third Prize of \$1)

WHEN WE decided to buy our 65-acre farm, we had to sell our last horse to make the first payment. We had four small children at that time and things looked gloomy with a big debt staring us in the face, but we had decided a home we had to have—other things could be sacrificed. We had a cow, a flock of sixty hens, a few hogs, one sheep and corn and vegetables to last us through the winter. I look back now and laugh at the sacrifices we made at that time, though it wasn't very funny then, but we always tried to appear cheerful to each other, and neither husband nor I are given to the blues. I always managed to keep us plenty of good warm clothing and only bought cheap gingham and calicoes for my own and the children's clothing, though I made them in the latest style. Husband wore one best suit for Sundays for ten years and I wore one hat for four summers, though I turned the trimming around many times—all the children's underclothing was made from cast-offs.

I never allowed anything to wear out, as one neighbor remarked. I would keep things patched and never allowed anything to keep me from mending every week, thus making the clothes last as long again as they would if not mended in time. Husband had a cobbler's outfit and he kept the shoes mended as religiously as I did the clothes.

We raised a few calves to sell each year and also soon had a nice flock of sheep, from which we could sell mutton occasionally and the wool brought in a nice little sum. Our chickens were a stand-by all the time and we managed to pull through in four years.

Every dollar we could get we applied toward the debt, going without everything that we could and some that we couldn't. They were happy years and I would go through it again if it was the only way to get a home. "I say get a home at all costs. Then you can add other things later.—A Reader, Fall Branch, Tenn.

International Harvester Farm Wagons

HAVE you seen the latest in wagons? It is the International fifth wheel (patent applied for) and it is worth a trip to town to see. Weber and Columbus wagons, built to the highest standards in every detail, are

The Only Real Fifth Wheel Farm Wagons

This is one of the best improvements ever put on the farm wagon, because it prevents the pulling up or pitching of the front bolster. It means no more bent and broken king pins—no more bent and broken circle irons—longer life for the wagon, and easier work for the horses. See the International fifth wheel on Weber and Columbus wagons.

If you will write us, we will send you catalogues and information about this and other improvements on farm wagons and will tell you where you may see the wagons.

THE FARM *and* ITS PROBLEMS

of Producing and Marketing

If I Were a Farmer—III

By Mr. Town D. Weller

A FARMER'S wife is too often little short of being a common drudge. I'm always sorry for the lot of a woman on the farm—especially if she's one of the drudging kind who has to do everything short of saw and split the wood for the kitchen stove. Of her it has been truly said that while "a man may work from sun to sun, a woman's work is never done."

Now, if I were a farmer, I'd take my wife into partnership. I don't believe in any such one-sided arrangement as that which takes it for granted that all the modern labor-saving devices of the present day are for the men folks alone. It looks to me as though most farmers went on this idea. Farming is a lot easier for men nowadays than it used to be. Except in harvest time a man can do most of his field work riding behind a team instead of keeping step with it. But the women folks most generally still have to pump and carry water, run the churn and separator by hand, and do the family washing in the same old back-breaking way.

It would be only right if, when Mr. Farmer gets himself a manure spreader which does most of the work while he does the driving, that he should also put in a little gasoline engine for the wife, which would do the churning and separate the cream and operate a washing machine. She is just as much entitled to being saved some of her hard work as he. And no doubt she would enjoy improving her mind as she enjoys the scenery while the butter is making by machinery, as he enjoys the scenery while the manure spreader is doing the work he used to have to do with a fork.

And if I were a farmer I'd connect up my house with the windmill or the aforesaid engine and have some modern conveniences in the house. It does not mean a prohibitive expense to have running water in the house—and it is well worth it from the standpoint of convenience and sanitation. The city man has an idea that the farmer never gets a bath while the creek is frozen over—and that's one impression I'd do my share to eliminate if I lived on a farm. I'd have hot and cold water—not only for my own well-being, but for the convenience of the wife. In this twentieth century I believe she should be spared the handicap of doing her share of the work by methods that prevailed when our ancestors settled New England.

Marketing the Wheat Crop

B READ, being the staff of life, centers the interest in the marketing problems on the wheat crop. Not every farmer raises wheat, but every farmer, as well as every worker in any other business or profession, is directly interested in wheat. The man who raises wheat is interested from the standpoint of seller; he who does not raise it is interested from the standpoint of a buyer of bread.

There are two sides to this worldwide problem of marketing wheat. The first is buying from the producer. The second is selling to the consumer. These should bear a direct, constant relationship to each other. That this relationship is frequently not what it should be shows that somewhere between the two ends there is something wrong—the difference between what the consumer pays and what the producer receives is far too wide. In the second place, the producer suffers changes and variations in price that are not justified by the price paid by the consumer.

The universal interest that has been taken in the price problem is confined

principally to the consumer's end. When prices to the producer fall, little is said of any injury done him. No wide publicity is given the hardships he suffers because of the falling prices; but when prices advance to the consumer a howl is sent forth that agitates the atmosphere of the whole country. Curiously enough, every one points an accusing finger at the producer. The mental guns of our great department of agriculture are trained on the farms. Agriculture is "investigated." But the only portion of the line from producer to consumer which really needs investigation has been overlooked. The big guns of the investigating department are of too long range. The trouble lies closer to the

consumer than to the producer. When Congress was urged to pass an embargo act prohibiting the exportation of wheat, so prices might be made lower, did any one stop to think that the only result would be to cut off what little profit the farmer might have had? Yet that is exactly what would have occurred, and nothing more than that.

What is needed is an investigation all along the line from the producer to the consumer.

How much does the local buyer make on the wheat he handles?

How much do the railroads obtain?

How many times is the grain handled before it enters the mills to be made into flour, and is it necessary

for it to receive so much handling, each one adding to the expense by contributing to some handler's private fortunes?

How much does the miller pay for the grain he grinds and how much does he receive for the flour and the by-products of his mill?

After the flour is ground, by what route does it find its way to the consumer? Is the system of distribution what it should be?

Why not investigate all these things? Why not employ experts to determine ways and means of increasing the efficiency of the distributing system, and lessening its expense, as well as to have them all over the country, trying to increase the efficiency of the farmer and the production of his farm?

It will require several thousand farm experts, several millions of dollars per year, and several years of time to bring about the desired results in farm production. It is a necessary work, and it should be done; but the greatest trouble will not be touched thereby. Why not put experts at work to investigate and reform the system of distribution? It would not require the one-hundredth part as many men, or a tenth of the time, or a fraction of the money that is being put into the farm expert system. If the money expended in the greater-production movement will pay, the money necessary to reform the marketing and distributing system would pay a thousandfold more.

The price to the farmer should be one that makes his farm work satisfactorily profitable. It must be such as to enable the greater-production movement to succeed as it should. This is the farmer's own particular problem, which he must solve, by organization and co-operation. The distributing problem is a wider problem, and all classes must co-operate in its solution. The beginning of such co-operation must be laid in a wider knowledge of the methods and costs of the system. Let the light shine along the entire road, so all may see what is wrong and how the remedy can best be applied. If Congress must create commissions, let it create one to do the work which must be done before real reform can come.

The Pure Food Law and Its Effect on Marketing

A NEW amendment to the federal food and drugs act provides that all package goods must be plainly labeled with the net contents. Every barrel of apples, basket of peaches, bag of potatoes, and all other package commodities, must bear a statement showing the net weight of the contents in terms of dry measure. (In case of liquids, the content should be expressed in terms of liquid measure.) It is not sufficient to mark a box of apples, for instance, with merely the number of apples in the box, unless the average diameter of the fruit is made part of the statement. The law does not recognize heaped measures.

In Indiana, all commodities may be sold either by weight or measure. The sale by weight is strongly recommended. When sales by weight are made, it is a violation of the law not to mark on the package offered for sale the net weight of the contents, with bold letters, and on the outside of the package where it can not fail to be seen by the purchaser.

The law also deals with meats and meat products. Any animal in the least afflicted with disease of any kind, chronic or acute, can not be butchered and sold for consumption without violation of the law, and any one, farmer, butcher, packer, or dealer, handling such meats will, if detected, be put beyond the ban of decent citizenship, behind the bars of the jail.

Making the Most of the Corn Crop

(Continued From Page 8)

Young hogs require different feeding from old hogs, and young cattle from old cattle. Bacon hogs need a different feed from lard hogs, and dairy cattle demand other rations than beef cattle, and so on. To determine the most favorable ration for one's own particular needs, the farm papers, the bulletins of the experiment stations, and authoritative books should be read and studied thoroughly. Carry your personal problems to your agricultural experiment station. Get the habit of writing letters; it will be good for you, stimulate your mind, bring you into greater contact with other minds and ideas. Write the editors of your farm papers. They may not themselves know just what you want to learn, but they will know some one who does. All these things will help to make the most of your corn crop.

The problem of utilizing part or all of the plant as food is another one to study. It will undoubtedly prove profitable to arrange the farm plans so that stock can be kept in sufficient quantities to consume all the corn stover that the farmer can find time and labor to put up. Improved machinery is a distinct advantage in this respect. The silo comes first in importance and value. Then cutting corn for fodder, and husking and shredding comes next. If we know just exactly the composition of the corn plant at its silo stage, at fodder stage, and when thoroughly ripened in the field, ready for husking, we can make fairly safe calculations for the arrangement of a system for handling the crop in order to get the greatest and most lasting benefit. We should know something of the digestible values of the crop at each of these three harvesting stages, and how much plant food is drawn from the soil during each stage. Then we will know whether we exhaust more or less of the plant food by the different methods. Books, bulletins and farm papers provide us with means for determining all these things. We will be anxious to read and study along these lines once their importance is realized; and by reading the experiments whereby facts are discovered we are made to realize the importance of knowing them. They show the actual difference in bushels, in pounds of beef and pork, in butter, in gallons of milk, and in dollars and cents. It is the reading, thinking, planning farmer who is going to come to the front in agriculture. The time is past when the ordinary farmer can hold his own, and the time is coming when the best only will be permitted to use the land. Necessity will demand that those who raise corn know how to make the most of it.

There are approximately 100,000,000 acres of corn to be harvested this fall. A goodly quantity is now in the silos throughout the country. The growth of the silo is great, but there is room and need for twenty or more silos where we now have but one. Thousands more will be erected next year, and the year after, in ever-increasing ratio.

Thousands of acres in every corn-growing state have been cut and shocked to be either shredded or fed in the stalk. This saves more of the value of the plant than leaving the stalks in the field, yet much of the beef and butter materials are wasted. When properly shredded, this waste is materially reduced.

When it is not possible to shred the fodder a waste can be avoided if the shocks are hauled up near the feed lot and properly stacked. Leaving them out in the field exposes such a large proportion to the storms and sun and winds that the waste is considerable. Properly stacked, this waste is practically all eliminated.

Hundreds of thousands of acres of

corn are husked in the field and the stalks left standing. If stock are pastured on them, they are exposed to the weather until the entire field is husked, and here again wind, sun and rain accomplish a waste. It will pay to run a temporary fence through the field as soon as a portion of it has been husked, and turn in the stock on the husked portion, if one is feeding beef or dairy cattle. This is applicable only to large fields, of course.

Stable manure is the best natural fertilizer known to civilized man. Live stock raised on the farm under an efficient system is and will doubtless always be the most profitable method of disposing of the grain, fodder and grass grown on the farm. The farmer who would make the most of his corn crop should study his possibilities for turning all his crop into live stock, thus returning to his soil the greater part of the fertility taken to make the crop. Turning the corn crop into the most money with the least loss to the soil is every corn grower's problem. He can solve it to his great satisfaction and profit once he determinedly sets his mind to the task.

Clearing the Land with Stump Pullers

The Agricultural Department of the United States has issued bulletin after bulletin on clearing stump land. It has been demonstrated so often and so conclusively that cut-over land is immensely productive; that it is really virgin soil; that it will bear enormous crops; that two seasons' profits will more than repay the cost of ridding the land of the stumps.

Why is it, then, that there are so many millions of acres of stump land in America and Canada?

One would naturally suppose that with farm land selling for from \$50 to \$200 per acre that no farmer would think of permitting any portion of his land to loaf on the job. It astonishes the farmers of Europe that otherwise shrewd American farmers permit valuable cut-over acres to remain idle, the roaming fields for cattle, pigs and sheep.

Of course, it is true that thousands of acres of cut-over land have been reclaimed in the last few years. Some farmers have resorted to dynamite. Others have used the new all-steel triple-power stump puller. This new device seems to be most effective. Two men and a team of mules, horses or even oxen have pulled 191 stumps in a ten-hour day. Theodore F. Denker of Clare, Mich., was interviewed the other day and said: "My record with this steel triple-power stump puller is 191 stumps in ten hours and 595 stumps in three and one-half days—all hardwood, tap-rooted pine stumps."

The remarkable natural fertility of cleared land has been proven so often that it seems almost unnecessary to emphasize it here, but a letter received from J. C. Davidson, Kendall County,

notice in any article bearing on this subject. He says in part: "Up to six years ago I had a six-acre tract of timber land, of which I was very proud. During the summers of 1907 and 1908 I used the field as a pasture, but I felt right along that it was not yielding me the profits that it should. It was right next to a corn field that produced averages of 76 and 73 bushels per acre in 1907 and 1908.

"In the winter of 1908 my son suggested getting rid of the stumps. We began by burning a few of the old, well-rotted stumps. At last we decided to use a stump puller. After we got the machine and tried it we decided upon a systematic clearing up of the six acres. By the end of February the lot was as clean as a whistle.

"That spring we fitted this lot for corn and since have kept tab on it just to verify our opinions that that ground would grow good corn if the stumps were out. We prepared and treated the lot exactly as we did the adjoining corn field and this six acres yielded an average of 86 bushels of corn to the acre and the next year an average of 87 bushels.

"Primarily we have to lay our success to the removal of the stumps."

Ice for Next Summer

It is not too early to be thinking of a good supply of ice for next year's heated season. Ice is fast becoming a necessity in modern life on the farm, as well as in towns and cities. Wherever possible, every farm should have its own ice supply. Where this is not practical, a community ice house or factory and cold storage plant can be made to serve the purpose. Look after the ice pond and put the ice house in shape.

"Plenty of vegetables. Market more than supplied with its quota." This from a dispatch from Boston to a produce journal. An economic fault that should and can be corrected; must be, in fact, before we can solve either the high cost of living or the greater production problems. And the only way is by a reformed system of marketing based upon a nation-wide cooperation of producers.

Nearly every business interest has its representatives at Washington, watching legislation. This, too, when nearly all classes of industry except agriculture are well represented in the membership of Congress. We farmers, therefore, get only what the others are willing we should have.

When buying new shoes for the school children, consider other things than price. Fit, comfort, and durability are chief considerations. Get god-looking ones, too. Cultivate personal pride and neatness in the child. To make a child suffer from humiliation is a crime; it often retards progress in education.

Lowest Prices Ever Made on World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing Lasts as Long as Building Stands

Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end. Its cost per square is the lowest ever made. It has no upkeep cost. Always beautiful in appearance. Reducing cost of fire insurance.

EDWARDS Exclusive Tightcote Process

Makes Rust-Proof Roofing. The zinc spelter becomes practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingle, Grip-Lock Roofing, Pressed Standing Seam or Roll Roofing, Ceiling, Siding, etc., is dipped in a bath of molten zinc, one at a time after the metal has been stamped and resquared. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to the weather.

How To Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with your finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking. Protects Nail Holes. Roof never warps, buckles or breaks—nails are driven through the under layer not exposed to weather—cannot rust. No special tools or experience needed to lay EDWARDS Galvanized Steel Roofing; anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles

Cost Less, Outwear 3 Ordinary Roofs and are your joy and pride forever. No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs.

LIVE STOCK and DAIRY

Producing and Marketing

Marketing Live Stock

UP-TO-DATE FARMING believes that, with very few exceptions, if, indeed, there are any at all, every product of the farm, garden and orchard could be marketed to better advantage through the right kind of a co-operative marketing organization. It believes that co-operative marketing will assuredly supplant competitive marketing, because it will be more profitable, more convenient, less expensive, and right in line with the progress of the world's business. Consequently, this paper is indefatigable in its endeavor to encourage and to build up co-operative marketing and to point out the many opportunities therein.

The local clearing houses of the Farmers Society of Equity, an organization which is doing its part toward the solution of the marketing problems, have been very successful in the marketing of live stock, cattle and hogs intended for the packer, through the Equity co-operative system. But

there are other live stock marketing transactions which have not been developed, but should be. Packers are not the only buyers of live stock. Farmers themselves are heavy purchasers. They buy feeders by the hundreds of thousands every year. Thousands of head of horses, cattle, sheep and hogs are purchased for breeding purposes. The dairymen buy milk cows in immense quantities annually. And the present marketing methods employed are far more cumbersome and costly than necessary. More direct marketing is not only highly desirable, but easily possible. FROM farmer direct TO farmer is the ideal way. It is also the most practical way. For instance, farmers scattered through five or six adjoining counties in Missouri raise feeding cattle which are bought eventually by a few farmers in perhaps a single county in Iowa, or Nebraska, or Kansas. With proper organization, there is no reason why the Missouri organization of growers should not sell

from the island of Jersey, the home of the cow of most pronounced dairy type. The Jersey of pure type is the highest example of what proper breeding can do. Since 1779 there has been no importation of cattle allowed on the island. As the island of Jersey is small, being only eleven miles long by six in width, and as the land is divided into small farms of from three to thirty acres, the number of animals kept on each farm must of necessity be small, rarely exceeding twelve in number, therefore, extensive range or pasturage is out of the question. The land is too valuable, the rent being from \$50 to \$100 per acre, and is devoted to market gardening almost entirely. The herd, whether large or small, is tethered and must be changed from place to place several times a day. They are led, never driven and almost wholly attended by women or girls. But little grain is fed; some roughage as hay, grass, etc., is given and the balance of the ration is supplied by root crops, parsnips being the main de-

highest in favor amongst butter makers and for all around good qualities has few if any equals.—A. C. McPherson.

Wisconsin Farms Wiping Out Hog Cholera

WILL WISCONSIN be visited again this fall with a scourge of hog cholera?

Not if the fight already started against this dread disease is carried out effectively throughout the present season. In various sections of the state farmers have organized associations for the purpose of preventing the spread of infection, and if possible, to stamp it out completely. In this campaign they are being aided by the Agricultural Experiment Station, which the legislature has commissioned to manufacture hog cholera serum to be sold at cost to the farmers of the state.

direct to the Iowa, or Kansas, or Nebraska, organization of feeders. The business agent of the one could notify the business agent of the other the quantity and quality and price. No speculative class need come between to bleed both ends for the benefit of the middle.

The staff of this paper is ready at any time to assist in the formation of local clearing houses for co-operative buying and selling. We are glad to confer with our readers who desire to undertake this work and we are willing to help, to the extent of our ability, in the construction and operation of co-operative marketing associations. The Market Place, which runs regularly in this publication, is a bulletin board devoted to bringing buyer and seller together. And as all live stock men must use some media for marketing, why not use one of their own, devoted entirely to their own interests and welfare?

Articles will appear in this department from time to time treating on the various phases of co-operative marketing, and in every community where this paper goes to a fair percentage of its farmers, the successful operation of a co-operative marketing association is practically assured.

The Jersey

THE JERSEY can justly be called "queen of the dairy." No other cows will tone up butter equal to the channel island cows. In Indiana a certain number of Jerseys are required in a dairy herd by state inspectors before milk will be graded as standard. The Jersey originally sprung from the stock of Normandy and Brittany—provinces of France which lie but thirteen miles

pendence, this crop being grown extensively for this purpose. The mean temperature of the island is 57 degrees. These conditions have developed a delicate, highly organized breed of cattle, but possessing constitutional vigor. Two thousand Jerseys are exported yearly, the most coming to this country.

The Jersey is smallest in average size of any of the dairy breeds, and the weight of the Jersey is considerably more in America than in its native island. There is more variety as to color than any other known breed, and solid colored cattle are seldom found. There is a "peculiar something" in a high-bred Jersey that betrays its breed. Delicate, clean-cut features, small delicate ears, neat, fawn-like limbs and quick, graceful movements are native to the breed. The Jersey ranks second to the Guernsey in the abundant secretion of coloring matter. This coloring imparts a deep orange coloring to the fat of the body, and gives a rich tint to the cream which is handed down with interest to the butter. With larger range and more severe climate, the American-bred animals are larger boned and more robust than in their native island, and in dairy qualities they are superior to their island ancestors also. In the records of what the "little Jersey" can do at the pail or churn, it must be remembered that for generations she has been bred exclusively for butter-making, as there was no demand outside of the island or home for milk. It is not unusual for a Jersey to produce 400 pounds of butter annually. Cases are on record where they have produced as high as thirty pounds weekly, but this amount was not sustained the year round.

Without doubt the Jersey cow stands

THE POULTRY YARD

Producing and Marketing

Marketing for More Money

By Robert H. Essex

FARMERS and farmers' wives who raise poultry are, of course, interested in anything that helps them to make more money from their flocks—more especially if it costs them nothing to get it. Nearly every farmer of enterprise now possesses a standard-bred flock. This has added materially to the income of the farmer's wife, who generally looks

after the poultry. Standard-bred poultry weighs considerably more than an equal number of mongrels, and brings in that much more money, yet costs no more to feed. If but one pound is added to each individual fowl, then in marketing 100 fowls one has gained 100 pounds, and it should be remembered that one gets more per pound for a good standard-bred than for a skinny mongrel.

The introduction of better layers is another means of increased income which has come to the farmer in recent years. If the farmer who keeps mongrels will keep track of the number of eggs laid in a year he will find that 75 to 100 eggs is about the number he is getting. He would get many more eggs than that from a well-selected standard-bred flock.

A mail carrier living near me, without any previous experience in poultry raising, has during nine months secured from a flock of twenty hens an average of 150 eggs each. By the end of twelve months they will be pretty close to the 200-egg mark. The farmer has every advantage over the city poultry keeper, with the one exception of marketing his eggs and poultry, and it is this one exception that I wish to refer to more particularly in this article, and to suggest to the poultry-keeping farmer how he can add still more to his income by marketing the eggs and poultry at a greater profit. It is a question of care and management—a question of improvement in the market product—just as getting more eggs and heavier fowls is a case of improvement in the breeding of the fowls. Having improved the breed, it would be a pity not to take advantage of the opportunity to improve the market product at the time it is delivered to the market.

The question to be considered, if the farmer would get a higher price per pound for his poultry and a higher price per dozen or per case for his eggs, is "How can I market them to greater advantage?" It is an important question. Two separate lots of poultry taken from the same farmer at the same time, alive or dressed, may bring the farmer several dollars more or several dollars less, depending upon where he sells them and how he does it. One lot may be marketed properly—may be handled properly by the dealer after they reach his hands, and may get to the consumer in first-class condition—pleasing to the eye and pleasant to the taste, and will be worth several cents a pound more than if they had been less attractive. The other lot owing to some little neglect on the part of the farmer or the middleman, or the express company, or somebody else, reaches the consumer in a different condition altogether. I have seen some boxed poultry nearly as dark in color of skin as a guinea hen, and it is certain that these being placed in the retailer's window would not bring more than half or three-quarters the price of the higher-class poultry. In most cases the farmer stands the loss. Sometimes the dealer who buys direct from the farmer is the loser. The farmer who has standard breeds has gone a long way towards avoiding trouble in the matter of skin-color which in mongrels is often variegated—several colors and worth so much less per pound. Standard breeds as a rule are even in color.

A similar condition exists with eggs. A farmer may be careful in keeping the nests filled with clean straw so as to render it unnecessary to wash the eggs; the eggs may be handled carefully and put aside ready to market when a sufficient number is collected; yet all the care may have been wasted by neglect of the one simple fact that the eggs have not been kept in a suitable place—and there are many places that are not suitable. Every farmer should know the day they are laid,

should consider the temperature in which they are laid, whether it was in the heat of summer or the frost of winter, and should act accordingly if he wishes to get the highest price for his eggs and maintain a ready sale.

Winter Eggs

SINCE WE have decided to go into the poultry business for the egg income, we have much to learn, but have never known defeat. Our flock consists of 500 white Plymouth Rocks, and these birds, in spite of the winter season, are laying us from fifteen to twenty-five dozen eggs daily. For many years our hens had consumed a great deal of grain during the winter months, and in return laid us but few eggs—scarcely none. We did not marvel at this condition at all; always our hens took their vacation in winter, but this year matters have changed at the henhouse and thereabout. The good woman and I made our several plans last summer, and not only that, we have carried them out with results. In thinking over the situation we realized at once that a new house for roosting quarters was needed, and fortune favored us in the outset by offering a sunny location, sheltered from the cold winter winds by a group of stately cedars. We built their new home there. It is an ample sized structure with an open-front sunning shed on the south. We consider a properly constructed winter home a requisite in obtaining a large egg yield, so accordingly we stripped all cracks against the chilling draughts, but in order to insure a plenteous supply of fresh air, the lumber wall on the south was substituted by one of poultry netting. The interior of this building is kept scrupulously clean and sprayed once a month with lime and sulphur.

There are other items to consider in order to insure success. The diet and exercise of our birds we think has much to do with their local reputation as quality stock. We feed grain once a day, but when we do it is scattered in a dry litter of straw in the "scratch room." This process of serving keeps the hens busy, warm and happy. At noon we gather up the scraps from the table preparatory to the mixing of a mash for the hens. We pay our small boys ten cents each for every rabbit they can entrap on the farm. This serves a three-fold purpose; it makes the young apple trees safer, furnishes the lads a little spending money, and insures a plenteous supply of the exact sort of food that helps to produce eggs. We cook the meat until tender, run through the food chopper and mix with the daily mash. We also feed turnips, onions, beets, rutabags and carrots, in their natural form, also clover. We suspend cabbage heads and other feed from overhead to a point within three feet from the ground or within jumping reach of the biddies. This gives them exercise in physical culture, keeps them warmed up and the blood circulating. A bountiful supply of fresh water, also oyster shell and gravel are always before our birds.

We gather our eggs two or three times a day, sorting out and laying aside for home consumption any small, dirty or ill-shaped ones, and the bulk we sell at fancy prices direct to the consumers in a nearby mining town. The valuable information we have gleaned from the pages of UP-TO-DATE FARMING has afforded us much keen enjoyment through our experiments, besides, we are earning a fat little fortune through the sale of eggs.—J. A. S.

They Couldn't Throw It Up to Her.

Bride-to-Be—Tell me truly, Frank, you've kissed other girls besides me, haven't you?
Hubby-to-Be—Yes, dear, but none that you know, so it makes no difference.

Woman's Work and Welfare

Helpful Hints for Homemakers

Kitchen Helps

TO GIVE the housewife more time for herself and to make her labors more pleasant, new things are continually being invented.

Civilized men cannot live without cooks, but cooking requires so much of the housewife's time that she began to cut out some of the fancy dishes, so man decided in order to get back to the fancy dishes he must devote more time to improving upon and inventing labor-saving devices for the home. I think there should be a special place for every article, and that it should always be in its place when not in use. If this rule is put in practice time that might be spent in reading or relaxation is not taken up in tedious and often fruitless search for some misplaced article. Nothing is so needed as a perfect system in housekeeping. This is one thing that makes housework drudgery. Another thing that makes one's work a drudgery is the absence of little accessories which would make it not only easier, but a pleasure. One cause of this is, that some women are just satisfied to have the kinds of utensils their mothers had. Men are progressing. They have every new farm implement that saves time and labor. Why should not the housewife have the same? Most any husband wants his wife to have those new, up-to-date, labor-saving devices. Often it is the wife's own fault. She is too easily satisfied. I have really known some women who have cooked for years in utensils that were not fit to cook anything in. A woman may sometimes be excused for sometimes having the living room untidy, but they should keep the kitchen clean to be healthy and have the food eaten with a relish. The housewife should read literature which has been especially prepared for her benefit and avail herself of its suggestions. Every wife should have a cook book and read it, and learn how to cook everything; how to prepare food for the sick. Many housewives never looked into a cook book, and their cooking shows the lack of knowledge. Many people are given stomach trouble by eating ill-prepared food. Wives should readjust their kitchens so that useless running to and fro is eliminated; they should throw away their useless worn articles and if possible replace with new and improved labor savers. Don't think that because your mother managed to keep house without any conveniences or knowledge, that you will too. Don't think you are too old to learn new methods; we are never too old to learn.

I will name some of the modern time and labor saving devices for the housewife. Of course, the washing machine, wringer and patent churns are not new, but the gasoline iron every country wife should have, it is not expensive at all, the gasoline costs less than the fuel to heat the old-time sad irons; besides the steps saved running to get a hot iron, and heat from the stove and iron. You can iron at any time you wish with the gasoline. The food chopper is very useful; it is surprising how many calls you have for it, and a child can manipulate it very easily. We have the polishing mitten, no neat woman will spare herself any pains in making her kitchen shine, and it is an acknowledged fact that the stove is the index to the character of the cook. The stove must be polished, and it is a hard task. I would rather perform any other work about the house than polish the stove, but this branch of housework

has been improved on by modern methods; the very latest and best and to cleaning the stove is the polish mitten. The work is done in one-half the time without soiling or staining the hands and finger nails.

I have been reading very much lately about the midget pump clothes washer. It costs only \$20. If any of the lady readers of UP-TO-DATE FARMING have ever used one, would you please tell me how you liked it. I am very much interested in this invention. I see they have the clothes sprinklers which insures even distribution of the water. The can opener, and cheery seeders are great helps. The alcohol torch is a new invention for household use where water or milk is needed boiling in a few minutes. The Yankee fire kindler saves hours of time and gallons of oil, does away with picking up chips and making kindling. The average person spends at least ten minutes picking up chips, splitting kindling wood, or pours a lot of kerosene on the fuel to get it to burn. The fire kindlers are made in order that this daily task may be accomplished easily and quickly. The handy lifter, every kitchen should contain one. With it you can easily remove from the ovens pans of beans, puddings, and roasts, without burning the hands or the use of cloths. There is the vacuum strainer that will take all the cream off the top of a bottle of milk in a second. I read where a little device has been introduced to especially do the work of relieving the fowl of pin-feathers. Now I think I shall have

one of these soon, for it consumes a great deal of time picking the pin-feathers from chickens. I forgot to mention, the cream separators are fine, and also the fireless cookers.

Now, I know housewives do not have all of these utensils. Some of them are not expensive, neither do they have to be bought in a day, but each year we should add some of these articles to our home, until in a few years we would have every useful article needed to lighten our work. Then take the cost of all of them, also including sinks in kitchen, water through the house, the expense then would be nothing to compare with the cost of man's implements on the farm.

All that are interested in mankind in general agree that the kitchen is the most important room in the household. In it the majority of the hours, of at least one woman's life are spent, and upon its cleanliness depends the comfort and health of the family. The modern housewife considers well the way of her household, and above all does she see to it that her kitchen is fitted out with all the convenient appliances that will make her work less burdensome.

I am confident housewives that have no conveniences, if they would get them, they would find plenty of time for reading and recreation, and in the end would acknowledge that housework was no longer drudgery. I for one, am in favor of all the modern conveniences in the homes.—Mrs. G. D. Richardson, Guston, Ky.

The Stove You Can Carry Around With You

With a NEW PERFECTION Heater, burning clean, convenient, economical oil, you can have heat in any room in the house without trouble. Comfortable heat for dressing in the morning, and when you bathe the baby—luxurious, instantaneous heat wherever heat is needed. The NEW PERFECTION is a blessing if anyone is ill, if you have to be up at night, and during the sharp days in the early fall and late spring when chilly mornings and evenings bring discomfort.

PERFECTION SMOKELESS OIL HEATER

The NEW PERFECTION burns 10 hours on one gallon of oil. Constant, unchanging heat without smoke or smell. No trouble to re-wick—come all ready to put in—you won't even soil your hands.

See the newest NEW PERFECTION at your dealer's and note the special feature found in no other heater. You will know it by the TRIANGLE—THE SYMBOL OF WARMTH, COMFORT AND GOOD CHEER. (243)

Business Plans for the Farmer's Wife

WHAT CAN the farmer's wife do to help earn more money? This is an important question which, if properly answered and the instructions followed by farmers' wives who have daughters or hired help in the house, so that time is available, will mean an added income for the use of the farm home.

There are many things which the farmer's wife may do to help her husband make a success of his work.

If she is quick at figures and has had better educational advantages than her husband, then she should study his business, keep the books, write his letters, watch his dates of payments and collections. In other words, keep right on the job and watch all opportunities for saving and making the elusive dollar. This nearly every farmer's wife can do. There are many other little side industries on the farm offering opportunities for profitable business ventures for money-making, on a small scale at least, and sometimes they are developed to become a very important, if not the chief, money-making work on the farm.

Raising Fruit

There is a fine opportunity to make money pleasantly and easily from the raising of various kinds of fruit, and it is a work women can do if it is not carried on too extensively. A fair-sized strawberry patch of 500 plants will afford a pleasant occupation for a woman and when picking time comes a nice little sum of money will find its way to the pin-money reserve.

Peaches, too, may be made to pay very well and require even less work probably than do strawberries. Of course there will be no direct income from them at first, but they will begin to produce in three years and the income from fifty trees, sold fresh, or canned, preserved, or made into other delicacies, will be very satisfactory.

Making Cottage Cheese

A good income may be made by making and selling cottage cheese in the nearby towns. Of course, the possibilities of this business would depend on your dairy conditions and whether the dairy makes butter or sells milk.

Butter Making

For those who live a long distance from any shipping point the making of butter will prove about as profitable as any other dairy work. In fact, even more so, if you do the work in an up-to-date manner, using printed wrappers for your butter and occasionally advertising it in the cities or towns where it is sold. Higher prices and a greater demand can be brought about in this way.

Poultry

So much has been written to women on this subject that it is scarcely necessary to add much more. The main problem is to get 100 to 500 good hens of the "laying" variety and then see that they are housed in warm buildings facing the south and fed plenty of warm food. This much done and things kept clean and neat—your income will be very good indeed.

Ducks

Fifty to a hundred ducks may easily be kept on almost every farm and if the market for the eggs is sought, you will have no difficulty in making this line very profitable. They are but little trouble to care for and get much of their food from their own efforts.

Squabs

This is one of the most profitable of all side lines for the farmer's wife who will take real interest in them. It is said that every pair of carrier or homing pigeons will give a dollar a year profit over and above all expenses. Thus 200 pairs would mean \$200 added to your income. They will require some study and their houses must be well built and adapted to their needs.

BIG INTRODUCTORY GROCERY OFFER

HERE is our offer. We will send you this big order of Groceries, and this fine rocker without one cent of money in advance. We want to prove to you at our risk how much you can save by buying your Groceries and Household Supplies direct from us, the manufacturers. We want you to learn how you can get a fine Rocker like this or other pieces of furniture every few weeks extra without paying any more for your Groceries than you are now.

We will ship you the Groceries and Rocker—when they reach you, we want you to test the Groceries—use them just as if you had paid for them—use the Rocker in your parlor—compare it with Rockers in your local stores that cost \$8.00 to \$10.00. If you find everything satisfactory and are convinced that you couldn't duplicate the value we have given you in your home town, then you can send us \$10.00 any time within thirty days.

Satisfaction GUARANTEED—Send No Money Unless Pleased

If you are not satisfied and thoroughly convinced that we have given you better value than you can get elsewhere, just notify us and we will take unused goods back at our expense and won't charge you a cent for what you have used.

We manufacture nearly 700 Grocery Sundries and Household Needs—the entire output of our large factories is sold direct to the home without the added cost of middlemen. Over 1,000,000 satisfied customers are saving money every year by purchasing their supplies from us and saving the profits and expenses of middlemen. We want to add your name to this big list of satisfied customers—we know we can save money for you—we know a trial order will make you a permanent customer and it is because we KNOW that we can please you that we make this liberal offer.

Bees

It does not draw very hard on the farm to keep fifty swarms of bees. For the most part they board with neighbors—and bring home the profits to their owner they have innocently stolen from Mr. Smith and Mr. Jones, and fifty swarms of bees add many dollars to your profits.

There are, of course, many other things right in the house which may be suggested, such as canning fruit, making scrapple, etc., which would perhaps suit most women better than the plans which we have outlined—but there are hundreds of women who ought to be or prefer to be out of doors and enjoy the fresh air at least an hour or so each day, and it is for such women that these suggestions have been written.—W. Clement Moore, New Egypt, N. J.

THE BEST RECIPES

Under this head will appear an expert's opinion of the best recipes, one from each of the papers and magazines which come to her desk.

GOLDENROD TOAST—Boil the required number of eggs until hard, then put the yolks and whites separately through a sieve. Have ready slices of hot toast and in the center of each put two spoonfuls of the yolk, surrounding the edge with the white. Over the whole pour white sauce and serve hot. This is a delicious breakfast dish.—*The Mother's Magazine*.

RICE PUDDING—Wash one-half cup of rice, put into a pudding pan and cook with just water enough to keep it from sticking to the pan. Add one quart of milk, one-half cup of sugar and one egg beaten together, a little salt and nutmeg and one-half cup of raisins. Bake one hour.—*National Stockman and Farmer*.

EGGS AND MACARONI—Six hard-cooked eggs, one-half package macaroni, six tablespoons grated cheese, one tablespoon butter,

one tablespoon flour, a little milk, salt and pepper, a little stock or water. Break the macaroni into convenient lengths, boil in boiling salted water until tender. Melt the butter in a saucepan, stir in the flour smoothly, add salt and pepper, then gradually add the milk and stock, stir until it boils and let cook for five minutes. Drain the macaroni, cut the eggs in round slices, put layers of eggs and macaroni in the dish, pour over the sauce, sprinkle the cheese over the top and brown in a hot oven. Serve hot.—*The Gleaner*.

APPLE ROLL—Make a rich pie crust, using a small amount of baking powder, roll out about the same thickness as for pies, then sprinkle with finely-chopped apples; sprinkle sugar and nutmeg over the top and dot with bits of butter, roll up and put in a bread pan, sprinkle a little sugar and nutmeg over the top, cover with boiling water and bake. A few raisins may be used with the apples.—*Oklahoma Farm Journal*.

FRUIT COOKIES—One and one-half cups sugar, one cupful butter, three eggs well beaten, one-half cupful molasses, one teaspoonful soda dissolved in a little cold water, one cupful raisins (chopped), one cupful currants, one teaspoonful cinnamon, one teaspoonful cloves, one teaspoonful nutmeg, flour to roll. Bake slowly.—*North Dakota Farmer*.

COCOANUT CUSTARD—Into a well-buttered pudding dish spread a layer of stale sponge cake; over this put a layer of shredded cocoanut; add another layer of cake and cocoanut. Make a custard by beating the yolks of two eggs and then adding two cups of milk, one-fourth of a cup of sugar and a pinch of salt; pour this over the cake and cocoanut. Lastly beat the whites of the two eggs until stiff and spread over the top of the pudding. Bake in a moderate oven until the white of egg turns brown.—*The Home Friend Magazine*.

BAKED BEANS—Boil two cupfuls of beans until cracked. When done, add a half-cupful of molasses, a quarter-teaspoonful of mustard, one teaspoonful of salt, a half-teaspoonful of soda and a quarter-teaspoonful of pepper. Mix this in a cup, set the cup on the beans and pour boiling water in this and let it run over the beans. Take the cup out when all the molasses, etc., is washed out of it. There should be enough water to cover the beans about an inch. Put three slices of pork on top. Bake three or four hours.—*The Farm Journal*.

3 big dolls given away

Girls, if you want 3 of the cutest dolls you ever saw send for this doll family. Louise is over 2 ft. tall, very like a real youngster in size. She can wear a real baby's clothes. She will sit or stand. Brother Jimmie is a husky fellow and Sister Susie is too cute for anything. JIMMIE AND SUSIE ARE FULLY DRESSED and you will be delighted with all three dollies. I want to give this doll family to a little girl or boy in each home. The only condition is that you secure a new 6-months subscriber at 25c to Up-to-Date Farming. It is published twice a month, 12 issues in 6 months.

Department of Buying Helps

We will be glad to assist subscribers in purchasing anything from a farm tractor or a diamond engagement ring to a churn or a mouse trap. Whatever you want, that is not advertised in Up-to-Date Farming, write to us about it. We will help you buy to your advantage. UP-TO-DATE FARMING, Indianapolis, Ind.

What is Now the Fashion

LEADING STYLES FOR AUTUMN

The leading styles for autumn are showing a wide divergence from the lines which were in vogue throughout the summer. At the risk of being tedious, we must repeat that the long line is now the thing and that everything in the way of drapery which interferes with the long, plain effects, must be pushed aside, or else the wearer will be labeled out of date.

The simple dresses which we know as the one-piece style are to the fore again, even for the street, and they are the only possible garments for the home, when dresses are worn. One of these is shown in the accompanying illustration and it is one of the best.

6881—LADIES' DRESS — ONE-PIECE STYLE. Has both front and back plain, to the neck edge, forming a small shoulder yoke to which front and back are joined, with the upper ends of the sleeves extended. The sleeves may be long or short as preferred. The waist closes in the front and the open neck is finished with a small collar. Skirt is cut with three gores. It has a few gathers across the back and closes in front. A wide loose girdle of the trimming material, brought down low on the hips, may be used. Sizes 34 to 44 inches bust measure. Medium size required 4 1/2 yards of 44-inch material, with 1 yard of 36-inch contrasting fabrics to trim.

6879—LADIES' SKIRT. This tunic model is all the rage. It is built upon a two-gore underskirt and has a two-gore tunic, cut away to display the front panel of the underskirt. The portion of this that shows is made of a contrasting fabric and the hidden portion is of lining. Sizes 22 to 32. Medium size requires 2 1/2 yards of 36-inch striped goods and 1 1/2 yards of 36- or 44-inch plain material, with 1/2 yards of 36-inch lining for upper back gores. In one material 3 1/4 yards of material 36, 44 or 54 inches wide will be needed.

6886—DRESSING SACQUE. This is of sacque cut, in one piece from shoulder to hem, with a belt for the waistline. A handsome collar of lawn or silk finishes the open neck and the sleeves may be made long or short as preferred. Medium size requires 3 yards of 36-inch material, with 1/2 yards of 27-inch contrasting goods, 3/4 yards of insertion and 1 1/2 yards of ribbon.

6912—WORKING APRON. Bib in front and back and with skirts which have a fitted front gore and slightly gathered side gores. Both bib and skirt sections meet in the center of the back, where they are

fastened by means of buttons and button-holes. Sizes 36, 40 and 44 inches. Medium size requires 3 1/2 yards of 36-inch material.

6885—GIRLS' DRESS. Sacque cut and fastens in the center of the front with buttons placed in a box pleat. The neck is just a trifle low and is trimmed with a small sailor collar and the sleeves may be full length or shorter. Sizes 2, 4, 6 and 8 years. Medium size requires 1 1/2 yards of 44-inch material, with 1/2 yard of 27-inch contrasting goods.

6877—MIDDY DRESS. The blouse is slipped on over the head and is open for only a short distance at the neck in front. At this point the blouse is laced up and a sailor collar finishes the neck. The plain sleeves are set on with a low shoulder and may be long or short. The pleated skirt is buttoned to the lower edge of the blouse and is, of course, detachable. Two materials may be used for this dress, or only one, as preferred. The favorite style is to make the skirt of woolen goods while the blouse is of wash goods. Sizes 6, 8, 10 and 12 years. Medium size requires 1 1/2 yards of 36-inch light material, with 1 yard of 44-inch dark goods.

6897—HOUSE DRESS. This simple pattern is cut in sizes 34 to 44 inches bust measure. Medium size required 4 yards of 44-inch material.

6875—LADIES' WAIST. A neat pattern, cut in sizes 34 up 44 inches bust measure. Medium size requires 2 yards of 36-inch material and 1/2 yard of 27-inch contrasting goods.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

How to Clean Your Furniture

In the October Woman's Home Companion A. Ashmun Kelly, writing under the title, "Is Your Furniture Shabby?" presents some helps to make it good as new. Following is an extract from his article:

"When the furniture begins to lose its original appearance of freshness, it should be renovated. A standard polish calls for raw linseed oil, turpentine and vinegar, well shaken; but while this is really a good polish, there is danger of allowing too much of it to remain on the surface of the furniture.

Remember that the office of a renovator is simply to remove dirt and grease, and not to give it a new surface. Hence, when you rub with a renovator, follow it with another rag and wipe off thoroughly.

"A preliminary cleansing with good soap and warm water is advised, but where there is danger of injury from getting the water into the joints where glue has been used, it would be better to use an acid. Acetic acid is excellent, and strong cider vinegar is useful.

"After the article has been cleansed, it will probably appear dull, owing to the taking away of some of the original coloring matter. I have always found rubbing with an oil color corresponding to the natural color of the wood or to the color of the finish, the best thing to do. Having cleaned the surface, and in some cases having also lightly sandpapered it, using No. 0 or 00 paper, rub on some pigment in oil. Work this well into the wood, and after a few minutes rub it off with a clean woolen rag. For walnut or dark oak, use burnt umber in oil, and for cherry or mahogany use burnt sienna in oil. Raw sienna in oil does for light-colored oaks and ash."

WE WANT Representatives

The Farmers Society of Equity wants a representative in every locality in the United States to organize locals and explain and establish the Equity

System of marketing farm products.

We have an attractive proposition for farmers and others interested in the farmers' welfare. All or spare time may be devoted to the work, which is both pleasant and profitable.

Farmers everywhere realize the imperative need for organization and co-operative marketing as never before. The Farmers Society of Equity is helping the farmers to solve their marketing and other problems in 20 states. There should be a local in every community.

Write for full particulars and instructions.

FARMERS SOCIETY OF EQUITY
Indianapolis, Ind.

Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

We were surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent of the farms in the country.

Grape vines are inexpensive to start with. They are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and they practically last always. In addition to all of these things, grapes bear fruit every year and the fruit is healthful, valuable and desirable almost second to none that grows.

Considering the sum of these advantages, how can any householder jus-

tify himself in putting off planting some grape vines any longer? Only one in seven farms has a grape vine. There are also hundreds of thousands of town and city homes that have neglected to provide this handsome vine and universally prized fruit. Grape vines such as ours would cost 50 CENTS EACH or more from nursery salesmen.

The varieties are Niagara, Moore's Early, Concord, Diamond, Worden and Catawba. This collection comprises extra early, medium and late varieties, and the three colors, black, red and white. Full directions will be sent with each collection.

Our Offer Send 75 cents and get this collection of six grape vines and UP-TO-DATE FARMING

one year, or send a club of five at 50 cents—\$2.50—and we will send you thirty vines and the paper one year to each subscriber. Send the coupon.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50 cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE LONG nights of fall and winter are coming on apace—in fact they have already whistled in at the station, so to speak. To me around those long nights cluster some of the sweetest memories of the farm home. The family always gathered around the table and some one read aloud for all the rest—read stories, history, poetry, or something in which all were interested. During the coming fall and winter season we want to make UP-TO-DATE FARMING better than it ever was, and we want it to go into twice as many homes as it ever went before; and we want it to become one of the family reading papers and a means of acquiring valuable information. We want the Cadets of Equity to help us put it into these new homes. Will they do it?

I am glad to begin our letters in this issue with the following nice one from Florida:

DEAR CADETS—I am a Florida girl and would like to join the Cadets of Equity. My brother takes UP-TO-DATE and we think it a fine paper. I think if other farm papers would try to hold up the price of cotton, wheat and other farm produce as UP-TO-DATE FARMING does, the farmers would fare better. I live on a farm near Brooksville, the county seat of Hernando county. I am 19 years old and have always lived on a farm and like it fine. I have a twin sister and would be glad to hear from boys and girls my age—I will try to answer all.—Flora Graham, Istachatta, Fla.

Next is from a truly enterprising Pennsylvanian:

DEAR CADETS—I am a reader of UP-TO-DATE, and enjoy it very much. I am 14 years old and live on a farm in the western part of Pennsylvania. We raise corn, oats, potatoes and vegetables. I want to tell the boys and girls how I am trying to earn some money for myself. I plant a ginseng bed every year. I have four such beds now, and will start another one this fall, and I will sell one-year-old plants this fall. This will be my first income, but from now on I will have a nice lot of money coming in every year. Within another year I will sell roots. I wish all Cadet boys and girls could have a ginseng garden.—Ray Berkhouse, New Mayfield, Pa.

But ginseng is not well adapted to all localities. There are other products, though, that may be handled in a similar way, and a foundation laid for a personal income.

DEAR CADETS—I am a 17-year-old girl of the farming district of Idaho, and I love to read your interesting letters about other parts of the country. I would certainly appreciate a card or letter from any or all of the cadets. I will answer immediately and tell you many interesting things about Idaho.—Eleanor Jones, Malad City, Idaho.

DEAR CADETS—I am a young man, 25 years of age, and I live in the land of flowers. I live five miles in the country with my father, who owns a small farm. I also own 40 acres of land. Our largest city has a population of about 2,500. There

Illinois, and I have lived on a farm all my life. My father takes UP-TO-DATE and thinks it is a fine paper for all farmers. I like all kinds of music and can play on the piano and organ. On account of dry weather the crops are not very good here this year. I will be delighted to hear from any of the Cadet girls and boys and will answer all that write to me.—Anna B. Staaf, Mendon, Ill.

DEAR CADETS—I would like to join the UP-TO-DATE writers. I am an Iowa girl of 14 years, and have four sisters and three brothers, two sisters and one brother younger than myself. I live on a farm of 160 acres, one mile from school and six miles from town. I would like to receive letters and cards from all the Cadet boys and girls, and will certainly answer all I receive.—Fannie M. Rice, Guthrie Center, Iowa.

DEAR CADETS—I enjoy reading your letters very much. They are certainly interesting. I am a farmer's daughter and have lived on a farm in good old Kentucky all my life. We live about two and a half miles from Hardensburg. Our main crops are tobacco, corn, wheat, rye and vegetables. I would like to exchange letters and cards with all the Cadet girls and boys, and will answer all.—Shellie Harsley, Hardensburg, Ky.

DEAR CADETS—I am a Wyoming boy, 16 years old and live two miles from Albin. My father has taken UP-TO-DATE for about two years and I enjoy reading the Cadet letters, and would like to hear from all the boys and girls, and will answer all. Ralph Brandon, Albin, Wyo.

DEAR CADETS—Would you like to exchange letters, cards and photos with a little girl from the city of Lynchburg? I am 16, and am a member of the West End Baptist church. I go to church every Sunday, and I do not miss a day from school. I have been going to high school for two years. I will answer all cards, letters and photos I receive, and I hope to hear from you all. I love to get long, jolly letters.—Belle Allen, Stafford St., Lynchburg, Va.

DEAR CADETS—I am a Mississippi girl, and would like to join the Cadets of Equity. I am a brunette, 16 years old, and live in the country on a farm of 160 acres. I would like to get letters and cards from all the Cadet boys and girls.—Susie Houphreys, Water Valley, Miss.

DEAR CADETS—I am a farmer girl, and will be 15 years old Nov. 26. I would appreciate a post card shower very much, and will answer all I receive. I am a graduate of the graded schools, and intend to take up high school work this winter. I will close with best wishes to the Cadets.—Portia K. Rodkey, Charleston, Okla.

DEAR CADETS—We take UP-TO-DATE FARMING and I enjoy reading the Cadet letters. I live on a farm of thirty-five acres, twelve miles from Louisville. I am 16 years of age and have lived on a farm all my life. I am a member of the Lutheran church and attend Sunday school and church nearly every Sunday. I wish to become a Cadet of Equity and would like to hear from all the girls and boys.—Katie E. Walker, Jeffersonton, Ky., R. 14.

DEAR CADETS—I'm a chap from Illinois. Where there are lots of girls and boys. My hair is dark, my eyes are brown, and I live six miles northeast of town. I am almost 19 years of age and enjoy reading the Cadet page. I plow the ground and rake the hay and have but little time to play. N. Y. to all that read this rhyme, Send me your picture and I'll send you mine.—Charlie Collins, Carmi, Ill.

DEAR CADETS—Having taken an interest in the Cadet letters, I decided I would like to join. I am 18 years old and live on a farm of 199 acres. The farm is the best place for young people to live. I would like to hear from all the boys and girls about my age and I'll tell them some interesting things about the beautiful country I live in.—Blanche Heide, Fulton, Ia.

DEAR CADETS—Father takes UP-TO-DATE and thinks it a fine paper. I always enjoy reading the Cadet columns. I am very thankful to Mr. Everett for giving this page to the boys and girls. It gives all a chance to express themselves and to exchange thoughts with one another. I live on a farm in southeast Missouri and have lived here practically all my life except a few months in Kentucky. I prefer country life, where one can breathe the fresh, pure air and exercise in the beautiful sunshine. Most all grains are raised in this section. The country is thickly settled and is most all farm land. The golden days of autumn will soon be here and how beautiful the forests look when the leaves have put on their golden hues! October is my favorite month, when "the melancholy days have come, the saddest of the year." My home is near a good school and church and I attend Sunday school twice each Sunday. I also attend literary and prayer meetings. I am a lover of music and art. We have an organ and I want to take lessons. I also think it is a nice thing to be a good cook and a tidy housekeeper. I feel so sorry for George Craig and his brother and sisters. May God bless them in their sad afflictions. I would be pleased to receive photos, letters and cards from all the Cadets. Will gladly accept all, but view cards are preferred. Will try to answer all.—Maude M. Martin, Birch Tree, Mo.

George Craig, the unfortunate cripple of Jasonville, Ind., writes that he has received from the Cadets \$10 to aid in the purchase of a wheel chair, but the chair will cost about \$22.

Thanking the writers for their good letters, I must close for this issue.

and more evident as we got our fruit into better shape, and bore down harder and harder with our advertising. * * * Now we have representatives in every fruit-buying city of the union.

As we said, this exchange has appropriated \$50,000 for newspaper advertising this season. We do not know how much it spends for salaried representatives and other expenses incident to competitive marketing, but it unquestionably reaches an enormous sum. And all of this is AGITATION. It is not the "systematically organized" condition that the writer we quoted referred to. If the growers of citrus fruit were systematically organized and if they had carefully-laid, well-defined plans and a central individual or group of individuals to whom to look for advice and guidance in marketing, all of the expense for newspaper advertising and nearly all the expense for salaried representatives could be saved the producers and consumers.

The point is this: There is just about so much demand for citrus fruit. Of course it can be increased by advertising, but that is not so much the purpose of the Florida exchange's or the California exchange's advertising. Each one's purpose is to advertise its individual products and secure trade at the expense of the other exchange and the independent sellers. And this is likely to go on until the expense becomes greater than the business can stand. Then they will realize that it is all unnecessary and the growers of the two states will come together in a federation with a central directing intelligence.

Another form of agitation is the postoffice department's parcel post marketing scheme. It is satisfactory only to a very limited extent and it can not have any hope of supplying the well-defined and carefully-laid plans to be carried out through one central head. But all of these fads or schemes help to prepare the way for the great revolution that is on the way. Considering that the parcel post direct-from-producer-to-consumer plan is now being rapidly extended by the government through the postoffice department, we will give it a little consideration to discover its weaknesses and limitations. We quote the following from a circular of instructions from Postmaster Campbell, of the Chicago postoffice to his patrons:

Deliveries will be promptly expedited and without unnecessary delay, thereby insuring to the consumer fresh products from the farm and dairy. The subjoined producers have made application to be included in the parcel post produce list and can ship direct to the consumers. It is suggested that the consumer write at once to any of the parties named and ascertain particulars.

About three hundred producers' names were on the first list. Some

names taken from it and what they have to sell follow:

J. A. Brown, Amboy, Ill., eggs.
Mrs. Peter Bombury, Manlius, Ill., eggs and butter.
Mrs. L. A. Clark, Ashton, Ill., eggs and poultry.
C. A. Darling, Matherville, Ill., eggs, live and dressed poultry.
H. J. Potts, Cutler, Ill., dressed poultry, eggs and butter; Saturdays only.
Mrs. William Reynolds, Jerseyville, Ill., eggs, up to fifty dozen a week; spring chickens in season.
Mrs. E. B. Coen, Washburn, Ill., vegetables.
Mrs. H. C. Cambridge, Iowa, fruit and garden produce in season.
M. C. Kent, Thayer, Iowa, miscellaneous farm produce.
Henry Stewart, Prophetstown, Ill., honey in five-pound pails.

The variety of commodities offered includes berries, jellies, currants, oranges from Florida, fresh meat and potatoes. Mrs. Mary Waggoner, of Judsonia, Ark., is willing to furnish unlimited supplies of strawberries in season. E. J. Cox, of Maitland, Fla., will ship oranges. John D. Smith, Jr., of Tipton, Ind., has apples, and F. P. Shephard, of Mooresville, Ind., has hog products.

It is evident that the housewife who wants to supply her table via the parcel post routes must write to at least a couple of dozen producers and must expect the daily mail to bring small quantities of commodities from Michigan to Texas or Florida. Then there will be times when the hens refuse to lay or the cows go dry or the vegetables and fruit are exhausted, then it becomes necessary to seek out other sources of supply. Thus there will constantly be an amount of correspondence and details that will suggest a stenographer and typewriter in each home that is going the mail-order route.

And the producer has about as many perplexities. For instance, Mrs. William Reynolds has now fifty dozen eggs a week. Perhaps 200 families will write to her, because there is no systematic organization or central intelligence to find where the supply and demand are and to connect them. The waste of time and postage by the people in this way will be enormous in the total. But, worst of all, the more this scheme is developed the more expensive living is bound to become.

For instance, it is evident that the parcel post marketing plan will not be sufficient for any family; but many of them will try it and will get part of their supplies in that way, we will say, at some saving. But there will be just as many retail and wholesale stores, and they must be supported by the same people. So the more that is bought by parcel post the less will be sold by the stores. And as the store sales grow less the prices must be increased. So, as we have said before in these columns, whatever will

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

By the President of the Farmers Society of Equity

In an exchange we find this:

History does not record a single great movement for the betterment of the human race; that was not systematically organized; that did not have a recognized head; that did not look to some one individual or group of individuals or institution for leadership and direction, and that did not follow some well-defined and carefully-laid plan of action, and was always preceded and attended by a campaign of agitation.

And what is true as regards the great reforms and revolutions in the past is true today of the reforms and revolutions that are under way. Think of the American Revolution and the agitation that preceded it, and the civil war and the agitation preceding. And now the whole country is agitated over the iniquities of the system of marketing crops and its features of speculation, exploitation, and gambling in the necessities of life.

This agitation, which has been in evidence for years, is the forerunner of one of the greatest revolutions of all time. It will be an economic revolution, rather than political. It will be brought about by the masses of the people, and must be, as their representatives in law-making bodies cannot, and should not if they could, shape the ends that will accomplish the great, peaceful revolution.

We see the agitation leading to this coming revolution in the organizations of farmers all over the country and of the consumers in market centers. We call this "agitation" because, while it is organization, it is along such lines that it can not do much more than emphasize the necessity for that "systematic organization" that the writer, whom we quoted, referred to. The present organizations, many of them, have no well-defined plans and none of them follow a carefully-laid plan of action and all have not a common head or leadership. So, while there is a form of co-operation practiced by the many farmers' and consumers' organizations now, it is such that the masses of the people cannot act concertedly. To do this there must be a CENTRAL intelligence that directs all.

Every one, farmer and consumer of his products, in a co-operative organization now, no matter what its name or what its plans of action, recognizes

that it is in his inability to act in unison with all other like people, in selling and buying, and they with him, that his weakness lies. They are organized, but not systematically or comprehensively. It is evident that an organization, to be fully effective for any one commodity, must include in its membership all the people having that commodity to sell, or enough of them to bring such a control of the commodity that too much of it will never reach the market at one time.

As a result of the agitation for organization among farmers the latest thought and hope is for a great federation of all farmers' organizations for the one object of marketing the crops. Only, we believe, through a federation of the present organizations can we hope to quickly solve the great marketing problem. It will be only when the present farmers' organizations cease to be rivals in organizing and competitors in business; when, instead of MY organization trying to find the market first and supplying it to shut the produce of YOUR organization out, that the definiteness about marketing and the profits in agriculture will be what all farmers want. A federation that will make YOUR business interests MINE and MINE YOURS and in which we can work together with a common purpose in view and where the abandonment of it by either would defeat both, is the kind that is needed.

The Florida Citrus Exchange has appropriated \$50,000 for agitation of its marketing problem, and its chief competitor, the California Fruit Growers' Exchange, has of late years spent several hundred thousand dollars annually to stimulate demand for its fruit. Mr. L. D. Jones, business manager of the Florida exchange says this about their methods:

Our sales organization started in a mediocre way by appointing sales agencies in a few of the more important markets. But we found that more than these scattered representatives were required to turn to the maximum profit our advertising efforts. We found that we needed salaried representatives who had our interests at heart absolutely, and who were free to devote their whole time to building a better market for Florida fruit. The need of a salaried organization became more and more

be saved by parcel-post buying will be lost in the higher prices at the stores for those things that can not be gotten through the post.

The person who studies the parcel post plan to supply a marketing system can not help but wonder whether the government is really sincere and wants to do something practical and permanent, or whether it is to keep the attention of the interested parties off of the main issue.

And we will say again that the establishment of public markets in the various cities is not in line with solving the marketing problem. Every new distributing agency and marketing agency that is established and which does not eliminate some of the old ones makes the problem more complex and the new condition is worse than the old one. This is because of further dividing the trade and, of course, increasing the whole expense. To the family that buys all at the public market, it may prove an unmixed blessing. But very few do this. Nearly every person who patronizes the public market also patronizes the local grocery store, so the more that is bought at the market the less is bought at the store and the price must be higher. Another way of losing what was saved by direct buying.

And another trouble is that the public market often does not accomplish what it was intended to. We find this report regarding the new public market established in Chicago this year:

CHICAGO, October 5.—Reasons for the reluctance of farmers to bring their produce to the new municipal market, a situation which seriously threatens the success of the experiment, were made public today by members of the market commission who spent yesterday interviewing farmers.

Some farmers said it was too late in the season to change their former practices; others declared that they could not afford to spend the day in the market disposing of their produce at retail, when commission merchants would buy by the wagon-load. Still others said that housewives were too particular and would buy only the best, while commission merchants take good and inferior alike.

Where this condition prevails the markets are taken possession of by the very people that it was hoped to avoid. So the wave to establish municipal and public markets is good agitation, but does not go very far toward solving the problem of profitable prices for producers and equitable prices for consumers. It is valuable in showing the public that full relief can not come in this way, and it must look further. The time will come, though, when all the schemes will have been tried and found wanting and then there will be a turning to a well-defined and carefully-laid plan and such a development of sane, safe and sound organization (federation) as few people ever dreamed of.

With all of these aids (?) our distribution of farm products is still unsatisfactory and enormously expensive, and it is getting worse every year. We do not want to be understood as saying that farmers' organizations for marketing are not delivering benefits to their members. On the contrary, there is a large number of them that have abundant reason for existing because of benefits delivered. We get reports from such every day. But the comprehensive organization or federation, placing the directing intelligence in one central office or head, will immediately multiply the benefits of the best of such.

Agitation has accomplished all that is necessary in this case for the producers and the consumers. The millions of these classes in organizations and associations have reaped enough benefits to forecast the beauties, blessings and benefits of perfect co-operation which will come through systematic organization. Opportunity is now knocking at the door of every local or district farmers' organization and at the door of every buyers' association. It is the call to lay aside differences, forget rivalry, and end com-

petition. The name of the society should make no difference, nor the plan and object, if one of the objects is marketing or buying the necessities of life. For this one object all can make common cause to accomplish it.

We will say that if your farm organization has not given you benefits it is your own fault, and if it has not given you all the benefits that you are entitled to it is because of competition of other organizations, instead of you having their co-operation.

Don't understand that we are belittling the benefits of local and district co-operation. They do deliver benefits to the members whenever the members use them for business; and we urge as strongly as we can to organize at every market town, city or shipping point and start to do business. But we also hold out the national-unity plan as the only way to completely solve the marketing problem in a reasonable time. And this plan absolutely calls for loyally maintaining every present local by paying the dues and organizing others as rapidly as possible.

As regards the Farmers Society of Equity, October first was dues-paying time for many of our locals. Some have not reported, up to this writing. If such are wondering whether they shall continue as members or not by paying dues, we will say they positively will make a serious mistake to refuse now. This is the time, more than ever before, to hold every local. And while holding it, take steps to select a better business agent if that is possible; do more business and make your organization more profitable.

NOTICE TO NEBRASKA FARMERS

Mr. B. F. Walton, Geneva, Neb., state organizer for Nebraska, rarely misses a week that he does not report two or more large locals organized. He says that he is receiving calls constantly, but will try to take care of all calls from any part of Nebraska. His last report before this writing was the Blair local in Washington county, with forty-six members. The officers are: W. E. Baird, president; U. S. Reeves, vice-president; C. O. Krogh, secretary-treasurer. If you want a local clearing house of the Farmers Society of Equity properly organized and instructed how to begin doing business at once, write to Mr. Walton. Mr. Walton's hobby is "business farmers," and he makes business men of farmers.

The Field

Marketing Eggs and Making Prices

C. M. Long, county agent for Johnson county, Missouri, is demonstrating the direct marketing of fresh eggs from producer to consumer by means of parcel post. The county farm bureau has organized an egg circle. To "belong" a farmer must agree to ship only fresh and infertile eggs and put his name or initials on the box in which they are mailed. The bureau then looks out for the market and guarantees the quality. Farmers belonging to the egg circle are said to receive from 3 to 5 cents more, net, per dozen than others. It is the intention to extend similar service to poultry, butter, vegetables and other products. Notwithstanding the aid this will give, the market price in the cities will regulate the profits and the big egg dealers control the market price, which by every reason of right should be controlled by the producers and the consumers, actual supply and demand. The producers can control the market price, within the law of supply and demand, only by a wide organization of producers. This the county agent movement does not supply.

Baked Potatoes 10 Cents Each

UP-TO-DATE FARMING: Referring to the cartoon in your issue of June 1, also your editorial, want to say I have been long talking myself blue in the face trying to get my neighbors to look at things from your viewpoint. Your paper so much better expresses my ideas to the dot. I contend, under existing conditions, the more we raise and dispose of the more we lose, and our troubles could be easily obviated if we would all get together, and it hurts me to the quick to

Sixth Annual Convention of the Farmers Society of Equity

The next annual convention of F. S. E. is ordered to meet at Pocatello, Idaho, in December. The exact date will be announced later.

At the annual convention national officers and directors will be selected for the ensuing year and every other thing done that may be considered for the benefit of the society. As relates to the annual meeting and selection of officers and directors, we print from the by-laws of the society as follows:

ARTICLE IX OFFICERS Sec. 3. The officers of the National Clearing House shall be a president, a vice-president, a secretary, a treasurer, a national organizer, and seven other directors. All are elective officers except the secretary.

NOMINATIONS

Sec. 4. Any member in good standing, and who has been such for at least one year, shall be eligible to election to any office in the national clearing house. Subordinate clearing houses and federated associations may, by majority vote, nominate one candidate for each of the offices named. Such nominations must be reported to the national clearing house on or before a date seven weeks prior to the opening date of the annual meeting. These shall be the nominees. They shall be published in the official paper of the society in at least three issues immediately preceding the annual meeting.

ELECTION OF OFFICERS

Sec. 5. The officers and directors of the Farmers Society of Equity, with the exception of the secretary, shall be elected by the members-at-large, the organized local clearing houses and the associations federated for marketing. The members of such shall express their choice on ballots furnished by the National Clearing House, or printed in the official paper or on other paper. Each member shall be entitled to one vote for each officer. Said ballots shall be sent to the National Clearing House by mail, or they may be brought to the annual meeting by the delegates

To comply with the terms of the by-laws it will be necessary to have all nominations in the national headquarters office by October 21, and printed in November first number of the official paper. Locals and federated associations should not put this matter off, as nominations close at headquarters on the 21st of this month.

Nominations may be made on this blank. (Do not nominate Mr. Everitt for the presidency. He said a year ago that he would not be a candidate again.

see the lack of co-operation. One thing to be eliminated before we can see daylight is the pawn-broker rate of interest charged us, to-wit: 10 per cent to 12 per cent. How many business concerns can net 10 per cent? Yet the farmer is forced to pay higher interest than the hustling business man can net on his business!

To mention one ridiculous instance: The Northern Pacific railway serves in its dining cars what they call the "Great Big Baked Potato," which they boast of and boost. The charge is 10 cents each. They must weigh one pound each. I am informed that the farmers who supply them receive 60 cents per cwt. The railroad receives \$10 per cwt.

There's too many dollars between producer and consumer.—Max H. Loewenstein, Montana.

An Indiana Community Success

From Columbia City, Ind., a correspondent writes that the farmer in his neighborhood is "thinking along with the rest and at the same time is acting."

"We farmers in our community," he says, "found that we were paying extortionate prices for manufactured articles, so we organized our patronage and incorporated for \$20,000 and sold it out in shares of \$25 each. Now we are able to meet corporation with corporation. We buy our wire fence, coal, posts, twine and farm machinery from factory in car lots at an enormous saving. We have demonstrated in a small way that we can organize the consumer, incorporate his capital, so that we will have both business rating and we are not afraid to sell to or buy from our exchange."

"Shipped potatoes were selling for 50 cents, farmers' price, when the consumer

representing such local clearing houses or associations and voted in the annual meeting. The greatest number of votes shall elect, provided it shall be found that the total number of votes cast shall equal fifty-one (51) per cent of the total membership in good standing. If such number of votes by ballot be less than fifty-one (51) per cent of the total number of members in good standing, then the election shall devolve upon the accredited delegates present at the annual meeting, who shall vote the number of votes to which they are entitled by representation and proxy.

REPRESENTATION

Sec. 6. The annual meeting of the Farmers' Society of Equity shall be composed of representatives of subordinate unions and clearing houses and federated associations as follows:

Each local clearing house and association federated for marketing is entitled to one representative, each county or district clearing house is entitled to one representative-at-large and one for each 1,000 members or fraction thereof in the county or district; each section clearing house is entitled to one representative-at-large and one for each 2,000 members or fraction thereof in the section. In the event that it is impractical for any local clearing house or federated association to send a representative, it may join another, or more than one to send a representative. In such case the delegate shall have as many votes in the meeting as he carries credentials. Each state union is entitled to one representative-at-large and an additional one for each 5,000 members in the state.

To comply with the terms of the by-laws it will be necessary to have all nominations in the national headquarters office by October 21, and printed in November first number of the official paper. Locals and federated associations should not put this matter off, as nominations close at headquarters on the 21st of this month.

Nominations may be made on this blank. (Do not nominate Mr. Everitt for the presidency. He said a year ago that he would not be a candidate again.

OUR MARKET REVIEW

Reports of Crops, Markets, Trade, Etc., With Advice

KNOW THE PRICE AND ASK IT

We believe the prices attached to the crops named below are fair and equitable and farmers ought to receive them. They are based on the Chicago market, unless stated to the contrary. When the price is paid in the market is the time to sell, allowing freight and a reasonable handler's margin to make the home price. We believe these prices will be paid before the next crops are ready, purely on demand. However, people will see these for themselves, they will pay. But, regardless of the number reading the paper (the circulation is now over 200,000), those of our readers who demand these prices and hold for them, will be very sure to get them, because the world needs all of the crops, and can not get along with only part of them. Those who control may need to hold until the DUMPERS have unloaded, but their time is bound to come when THEIR price will be paid. HOLD FOR THESE PRICES. SELL AT THESE PRICES WHEN THEY WILL BE PAID AND QUIT SELLING THE HOUR THEY DROP BELOW, THEN THEY WILL GO RIGHT UP AGAIN. Keep in mind that the more farmers who hold for and ask the prices the sooner they will come, because of reducing the supply in other hands.

A fair price, known by all the producers and that price demanded will make marketing and prices of farm products as definite as any commodity produced in the country. Yes, comparatively few of the producers can exercise enough control to compel the price.

The following prices are based on conditions as they exist now. Should conditions change materially in a short time, like the end of the European war, it will make revisions necessary. We predict the war will be a long one.

Prices are based on Chicago unless stated to the contrary.

BROOM CORN.....	

GENERAL trade of the country is summarized by Bradstreet's, on October 3, as follows:

Irregular, hand-to-mouth buying. Best reports from cereal crop sections. Slow at South and in Pacific Northwest. Cotton movement better, but far below last year. Next to record crop. Improved export trade. War demand stimulus. Industry slack. Textile trades best employed. Iron and steel, lumber, building and steam coal slow. Largest wheat exports on record. Clearings larger for week. Failures numerous.

The particular attention of all our readers is called to the recommended prices, to be asked for various crops, at the head of this column. The great bane of marketing farm crops is the lack of unity of purpose and co-operation for its accomplishment. For instance, there are many potato growers who believe they should have 75 cents a bushel for potatoes, basis of central market, which should net 55 to 60 cents for choice stock at country points and 45 to 50 cents for fair to good stock. But, unless their brother growers are of the same mind and will hold for and ask the same price, they (those who have decided on 75 cents) will need to wait a long time, and, perhaps, be defeated in the long run. But the purpose of this paper is to establish in the minds of enough potato growers, the fact that 75 cents is the agreed price; that those who hold for the price will represent so many potatoes that the market will feel the effect in less receipts and must offer the price to bring them out. Since our report two weeks ago so many potatoes were blindly thrown on the market as to break the price at Chicago 20 cents a bushel. After the harm was done, then the growers realized the folly of it all and they are now holding up. This is seen in the fact that on Monday of this week only sixty-five cars arrived, against 150 cars the preceding Monday. Tuesday's arrivals were seventy-five cars, against 100 the preceding Tuesday, and on Wednesday only forty cars. But the harm was done. The buyers and consumers have loaded up with the cheap potatoes, knowing that as soon as the farmers realized their folly in throwing so many overboard they would tighten up, and then the price would go up and the speculators could unload at high prices. And so it goes time after time. But with a price that we want all the growers to know, on potatoes and other crops, it can be different and the speculators' game will be defeated. Tell all your neighbors about these prices

and get them to ask them, too. Better yet, let them read this paper. Other crops will be added to the list in future numbers.

Weather conditions over the country are generally good, but inclining to be unseasonably warm. Some sections are still suffering from drought. The warm, dry weather, if in winter wheat sections, places the crop in danger from fly, but could not be better for maturing the corn.

The wheat visible shows a very heavy increase, both in this country and Canada. Notwithstanding that the European war is likely to last a long time and wheat and flour exports have been unusually large, the heavy receipts were because the spring wheat harvest of our Northwest and also Canada were just on and \$1 a bushel for wheat at country points is so unusual that the growers marketed with extreme liberality. With the heavy run of spring wheat now in and the price down, we expect marketing to be much less and prices will advance again. Remember, the world's crop is not a full average. The latest Russian report makes its crop 198,000,000 bushels, or about 20 per cent less than the year before.

The corn visible shows little change, but the price is around 6 cents a bushel lower. This is partly in sympathy with the decline in wheat and the fact that the new crop will soon come on the market. Also it is generally expected that the government October estimate will be higher than last month. The price of oats is also down about 2 cents.

The potato crop promises to be about midway between the record-breaking one of 1912 and the average one of 1913. The close of the season for the former found it practically impossible to sell potatoes at any price and hundreds of carloads did not bring freight charges when sent to market. In contrast with this, the close of the season for the 1913 crop found the price over \$1 a bushel. The present crop is a comfortable one and, if wisely marketed, will return the growers splendid profits. On the contrary, it can be marketed so unwisely as to net many of them a loss and few of them much profit. Note further remarks and recommendations about the potato crop above.

The cotton situation is the one that causes the greatest concern of all our crops. The government's October estimate puts the probable yield at 15,300,000 bales. The largest crop was in 1911, 15,693,113 bales. Only a small fraction of the cotton usually consumed in Europe can hope to be exported as long as the war continues, and the price paid for the domestic needs is naturally very low because of this condition. We are pleased, though, to note that there is good prospect of the federal government recommending the storing of cotton and a bankers' pool to raise money to loan 6 to 7 cents a pound. Of course farmers could have done this any time if organized as we have recommended, but they are more likely to act if the proposition has such high endorsement. If the growers will thus store that part that usually went into the export trade, and set a price of 10 to 12 cents on what the home demand needs, the price will be paid. We are against the proposition that the state legislatures make it compulsory to reduce the acreage. If growers generally store part of their crop at 6 to 8 cents and if the war is not over and normal marketing resumed by the time to plant another crop, the growers will voluntarily reduce the acreage.

The government crop report, issues October 7, gives the following figures (figures are millions):

Crops	Forecast	Sept.	1913	5-year
Winter wheat (a).....	675	675	523	441
Spring wheat (a).....	217	221	240	245
All wheat (a).....	892	896	763	686
Corn.....	2,676	2,598	2,447	2,708
Oats (a).....	1,137	1,116	1,132	1,131
Barley (a).....	197	200	178	182
Rye (a).....	43	43	41	35
Buckwheat.....	17	17	14	17
White potatoes.....	382	371	332	357
Sweet potatoes.....	55	55	59	58
Tobacco (lbs.).....	954	882	954	996
Flax.....	17	15	18	20
Rice.....	24	24	26	24
Hay (tons) (a).....	69	69	64	66
Apples.....	270	220	145	176

(a) Preliminary estimates.
The report indicates 78,000,000 bushel more corn, 11,000,000 bushels more potatoes, 21,000,000 bushels more oats, 10,000,000 bushels more apples and 92,000,000 pounds more tobacco, than the September report. Spring wheat is put 4,000,000 bushels lower than September.

Advice

WHEAT—Hold for \$1.25 a bushel. CORN—Sell old corn. Sell new crop from field around 55 to 60 cents a bushel. OATS—Hold. The price will be higher. POTATOES—Hold them. COTTON—Store one-half and ask a good price for the balance. Try to make the storing movement universal. BROOM CORN—Hold it.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on September 26, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease; X means increase).

	Sept. 26, 1914	Change from two weeks before	Change same period last year	Change from a year before	Change from 2 years before
WHEAT.....	51,822,000	X 13,340,000	X 2,788,000	—3,236,000	X 14,207,000
CORN.....	7,123,000	X 45,000	X 2,050,000	—1,628,000	—2,900,000
OATS.....	29,711,000	X 944,000	X 2,747,000	—7,599,000	X 16,708,000
BARLEY.....	5,238,000	X 1,603,000	X 2,278,000	X 56,000	X 2,144,000

The visible supply of wheat in Canada on the same date was 32,896,000 bushels. This is 16,315,000 bushels more than two weeks before and is 10,015,000 bushels more than a year before. The visible supply of oats was 2,403,000 bushels on the same date, which is 1,672 bushels more than two weeks before and is 3,226,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on October 6, two weeks before and a year before as follows:					
WHEAT, No. 2 RED					
Oct. 6, 1914	before	A year			
Chicago.....	1.05% @ 1.07%	1.09% @ 1.12%	93% @ 94		

	Change from two weeks before	Change same period last year	Change from a year before	Change from 2 years before
St. Louis.....	1.03 @ 1.04	1.05 @ 1.06%	92% @ 94	
Kansas City.....	98% @ 99%	1.04 @ 1.05	84% @ 90%	
Cincinnati.....	1.06% @ 1.07%	1.10 @ 1.11	96 @ 97%	
New York.....				

Minneapolis—Spring wheat—No. 1 hard, \$1.08%; No. 1 northern, \$1.06% @ 1.07%. Two weeks before, \$1.11% and \$1.05% @ 1.06%, respectively. A year before, 86% and 83% @ 85%, respectively.

CORN, No. 2, WHITE					
Chicago.....	73 @ 73%	79% @ 80%	70 @ 71%		
St. Louis.....	78% @ 77%	80% @ 81	72%		
Kansas City.....	72%	81 @ 81%	72% @ 72%		
Cincinnati.....	81	84			
New York.....			78%		

To Bring Seller and Buyer Together

There is an enormous demand in every part of the country, amongst farmers and people in towns and cities who are readers of this paper, for farm products that are grown in other parts of the country. Therefore, as an additional help to members of the Farmers Society of Equity, we have established this service TO BRING PRODUCERS AND CONSUMERS TOGETHER. Any member or clearing house of the society or any person who will become a member by now paying the entrance fee of \$2.50, may report his crops to sell or what he wants to buy, to the National Clearing House, F. S. E. and get this service FREE.

To save unnecessary correspondence, the quantity, variety, grade, condition as regards packing, and price wanted should be given. If an article that may be marketed by parcel post, a delivered price should be named. Prospective buyers can state what they want and may name the price they will pay. TERMS—They may be as agreed upon, but we recommend a deposit by the buyer in bank at shipping point or at destination, payable upon presentation of shipping receipt, or on arrival of goods. Mail shipments should always be cash with order. Honest transactions are imposed on every person who uses this department and dishonesty or trickery will be exposed when reported. Always mention "The Market Place, Up-to-Date Farming," when writing.

THE NATIONAL CLEARING HOUSE, FARMERS SOCIETY OF EQUITY, INDIANAPOLIS, INDIANA.

FOR SALE
FLOODED WITH MAIL—I have been trying to get in touch with fruit growers for the last eight years, as our local dealers held us up for the price, but were not successful until I ran across this department in Up-to-Date Farming. Since I expressed my wants in it I have been flooded with mail, which shows us that we can get all the fruit we want at less than one-half what we are charged here. It certainly is great for us ranchers. Geo. W. Worthington, Secretary, Nelber, Wyo.
HAY AND APPLES—In carload lots. Also cattle, hogs, and horses. Good quality guaranteed. J. H. Harpster, Millersburg, Ohio.
BEANS—Hand-picked navy. Mrs. Ellen Wilson, R. 1, Ellsworth, Mich.
BULL—Registered Jersey. Price \$111. Geo. W. Worthington, Nelber, Wyo.
CLOVER SEED—Red or medium, pure, re-cleaned. Very fine. Seed that will appeal to careful farmers; 7,000 pounds for sale or will sell in less quantities. John B. Leahy, Twin Falls, Idaho.
CORN, OATS AND WHEAT—In carload lots. Corn, 75 cents per bushel; oats, 59 cents. H. G. Casper, Secretary, Brainerd, Neb.
FARM—150 acres 5 miles from Gulf on high bank of large, navigable river. Usual buildings, large pecan orchard, oranges, lemons, grape fruit, peaches, pears, figs, grapes, berries, etc. Splendid fishing, bathing and boating. Good oil prospects. For further particulars, L. W. Culver, Pascagoula, Miss.
HAY—25 cars of baled upland. Also wheat and rye in carloads. C. S. Marcy, Sec., Hay Springs, Neb.
HAY AND POTATOES—First class. Geo. Gorman, Secretary, Mayville, Mich.
HORSES—A carload of mixed horses and mares, all sizes and ages. Good stock; no scrub horses. Very reasonable prices. A. W. Heide, Fulton, Iowa.
ONIONS AND POTATOES—Good quality, well graded. Lawrence Hess, Plymouth, Ohio.
PECANS—Finest paper shell pecans, delivered east of Mississippi river at 75 cents per pound. Send 10 cents for sample nuts. L. F. Culver, Pascagoula, Miss.
POLAND CHINA BOARDS—Three, registered, 4 1/2 months old, weight 85 pounds, price \$16 each. C. E. Perry, Warrenburg, Mo.
POTATOES, HAY, CABBAGE—Good quality, in carload lots. Gust Hetze, R. R. 1, Vesper, Wis.
POTATOES—Good Michigan. Alexander Lark, Secretary, Pellston, Mich.
POTATOES—In carlots and less quantities. Frank J. Zeits, Secretary, Provenom, Mich.
POTATOES—Fred B. Ekstrom, Secretary, R. 1, Manistowish, Mich.
ONIONS AND CABBAGE—Three carloads of onions and one carload of cabbage. S. E. Braendle, Clarksville, Mich.
APPLES—Rome Beauties and Ben Davis. \$2.00 per barrel f. o. b. Address Dell Upton, Leon, W. Va.
PRAIRIE HAY—Several carloads of No. 1 choice. S. N. Lust, La Harpe, Kans.
TIMOTHY HAY—50 tons light mixed; will grade No. 1 and No. 2 southern inspection, or No. 2 and No. 3 northern. A. Harpster, Millersburg, Ohio.
DRIED PEACHES—Mr. B. G. Doerkens, Box 45, Denair, Calif., has 3 or 4 tons of dried peaches for sale, \$6.00 per 100 lbs., f. o. b. Denair. This is home-dried fruit and is fine. Shipped in sacks. Will send samples.
DRIED PEACHES—\$6.00 per 100 lbs., f. o. b. Fresno, Calif. Address F. A. Kolz, R. F. D. 1, Box 51, Kernon, Calif.
APPLES—C. A. Chenoweth, R. R. 1, Shelby, Mich., has two carloads of Baldwins, Wagners, Golden Russets, Spies, Ben Davis and other kinds. Will sell lots at \$2.50 a barrel, 2nds at \$2.25 a barrel, orchard run (which will not include small, knotty apples) at \$1.50 per barrel. All f. o. b. Shelby, Mich.
TIMOTHY HAY AND MEADOW CLOVER—No. 1, price, \$12.00 per ton. Wm. H. Ramalla, R. R. 3, Evert, Mich.

Future Grain Prices

Chicago futures closed on October 6, 1914, and two weeks before as follows: Wheat—December, \$1.07 1/2; May, \$1.14 1/2. Two weeks before, \$1.11 and \$1.18 1/2, respectively. Winnipeg, Canada—Spring wheat—October, \$1.08 1/2; December, \$1.13 1/2. Two weeks before, \$1.09 1/2 and \$1.11, respectively. Corn—December, 66 1/2c; May, 69 1/2c. Two weeks before, 71 1/2c and 71 1/2c, respectively. Oats—December, 47 1/2c; May, 50 1/2c. Two weeks before, 50 1/2c and 53 1/2c, respectively.

Chicago Produce Market

Chicago, October 5, 1914. Chicago quotations are used in these reports for the sake of uniform comparison. Issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday 65	150	125
Trade was quieter today, but the market held on a steady basis and prices were without material change. Receipts were smaller, while buyers acted less anxious to fill orders. Many of the cars on offer showed up weather beaten and included more or less heated stock. They had to be discounted.			
Sales reported were: Per bushel, bulk—Wisconsin white—2 cars poor at 40c, 3 cars good at 45c, 4 cars at 46c, 4 cars at 47c, 3 cars at 50c, 3 cars at 52c, 3 cars at 53c. Minnesota—2 cars white at 48c, 1 car at 50c; 3 cars Ohio at 50c, 2 cars at 52c. Michigan white—1 car sacked at 53c.			
Per bu. Minnesota, Early Ohio, bulk or sacked			
Dakota Ohio 45 @ 55c		
Wisconsin 45 @ 55c		
The price of potatoes is around 20 cents a bushel lower than two weeks before. A year before the price was 55 to 60 cents for Minnesota and Dakota Ohio, and 53 to 60 cents for Wisconsin round white.			

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago for the period, 1900 to September, 1914, inclusive. The lowest figures in September, 1914, were: Wheat, \$1.01 1/2, on September 15; corn, 76 1/2 cents, on September 15; oats, 44 1/2 cents, on September 15.

SWEET POTATOES—Demand was fair. Usually at the end of the week there is little jobbing trade, and on the opening of the week the trade takes on more stock. The market was represented as being steady as follows:

Barrels, Virginia \$2.25
Jerseys 3.00 @ 3.25
Hampers, Jersey 1.00
Maryland 65 @ 75
Virginias are 50c a barrel lower than two weeks before. Jerseys are 25c to 50c a barrel lower than two weeks before and unchanged for hampers.	

BEANS—Were quotable at same prices as at the close of last week. The market rules quiet. Demand is tame. Some old on hand and with what new are coming dealers do not lack in supply. Of consignment offerings there are practically none offered.

Pea Beans—Hand picked, choice \$2.55 @ 2.60
Common 2.25 @ 2.40
Red Kidneys, common to good 3.75 @ 4.25
Brown Swedish—long 2.50 @ 3.00
Round 2.50 @ 3.00

The price of hand-picked choice pea beans is 40c to 45c a bushel lower than two weeks before. Other kinds are unchanged. A year before the price of choice hand-picked pea beans was \$2 @ 2.10.

HAY—Receipts, 1,612 tons. Demand light and market quiet. Offerings large.

Choice Timothy hay \$16.50 @ 17.00
No. 1 Timothy 14.50 @ 15.00
No. 2 Timothy 13.00 @ 13.50
Kansas, Iowa and Nebraska Prairie 12.00 @ 15.00
Illinois and Wisconsin Prairie 8.00 @ 10.00

Choice timothy hay is 50c a ton lower than two weeks before. Kansas, Iowa and Nebraska prairie, 50c to \$1.50 a ton lower than two weeks before. Other prairie hay is unchanged.

STRAW—Rye straw quotable at \$3.50 @ 9; oat straw at \$6.50 @ 7; wheat straw, \$6 @ 7. Rye straw is \$1 a ton higher than two weeks before. Oat straw is unchanged to 50c a ton higher. Wheat straw unchanged.

BROOM CORN—There is but a small demand. No one shows any desire to take car lots. Per ton—Illinois corn..... \$80.00 @ 120.00 Western..... 60 @ 90.00 Damaged, less.

The price of Illinois corn is \$20 to \$40 a ton lower than two weeks before. On western the price is \$30 a ton lower than two weeks before. A year before the price of Illinois corn was \$150 to \$160, and of Oklahoma, \$110 @ 150 per ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Monday 8,652	8,304	6,979
Tuesday 7,232	7,719	6,535

Total..... 15,884 16,023 13,514 The feeling is steady for fresh eggs and easier for refrigerator.

Real fine, fresh eggs are wanted for local use and to fill an occasional outside order, and the offerings of such are rather light. The demand is from the best class of trade, and hence only the best of eggs will

satisfy buyers. Storage eggs are being drawn upon and this lessens the demand for fresh to some extent. Fresh firsts..... 21 1/2 @ 22 1/2 Ordinary firsts..... 20 @ 21 Storage packed firsts..... 22 1/2 @ 23 Storage packed extras..... 19 @ 21 1/2 Miscellaneous, cases included..... 18 1/2 @ 21 1/2 Cases returned..... 18 1/2 @ 21 1/2 Checks, good sound..... 15 1/2 @ 19 Canned higher. Ditties, good..... 17 @ 17 1/2 Canned stock brings higher prices. Refrigerator eggs were again offered quite freely, and there was a moderate demand at easier prices. April extras, charges paid, quotable at 20 1/2 @ 20 1/2. Firsts nominally 20 @ 20 1/2, storage paid. The price of eggs is practically unchanged from two weeks before. A year before "firsts" were 25 @ 26 1/2.

SEEDS—Quotations are for 100 lbs., except flax, which sells by the bushel. Timothy—Scarce and steady. Country lots quotable at \$3.75 @ 4.85 for poor to choice; fancy higher; fair to good, \$4.25 @ 4.85. Contract seed, \$5.50 @ 5.75 nominal. Flax—Nominal; no quotation. Clover—Entirely nominal. Country lots, poor to choice, \$10 @ 14.50; fair to good, \$11.75 @ 13.75. Hungarian, 90c @ \$1.10. Millet, common, 75c @ \$1.25. Millet, German, 85c @ \$1.50. Millet, Siberian, 75c @ \$1. Buckwheat, good, \$1.75 @ 2.

Fruit

APPLES—Apples are plentiful and are coming forward freely. The demand is fairly good, but not enough to absorb the offering. Many bulk apples are on the market which takes away the demand for barrels. Also western box apples have only a quiet trade. The prospects are that receipts will continue large. Evidence still are that the crop is a liberal one. **GRAPE**—They are having a fair sale, but the trade is not brisk.

PEACHES—Demand has become small for Michigan peaches. Arrivals and offerings are also moderate. They are steadily held and good fruit brings good prices. Colorado peaches are preferred, as they have a very attractive appearance.

PEARS—Kiefrs are in good supply and are likely to be so for some time. They sell only moderately. Other kinds when nice, clean and smooth, are held firmly and sell fairly.

QUINCES—They are on the market from Michigan, New York and from the West. The trade will take some large, clean fruit, but for others it is difficult to find a buyer.

HURL A BRICK

(Concluded From Page 20)

every quarter every day of his life. It is simply infamous. It is a nasty, putrid infringement upon the manhood of the American farmer, and it is up to you, boys, to get busy, good and busy, and if you can not find a brick, a grindstone or a mill stone, get the ax. Get anything you like, in fact, but get busy!

What we mean by getting busy is to get together and fix our own price on our own goods. From time immemorial the other fellow has fixed the price on the farmer's products and nothing has offered him more pleasure than the goading of the farmer by informing him of that fact. So get together, boys—brick or ax—and cut him out.

If we would unite and solicit the support of our banks, business men and the entire community, to the end of holding our wheat, we would get one dollar per bushel (Chicago market basis) for every bushel we own, and the entire community would profit proportionately with the farmer through the transaction by helping to make the undertaking stick and by helping to make it stick to stay stuck.

As it is, and if something is not done, the whole of this year's surplus crop is going to the other fellow as an absolute gift and that other fellow is not going to be the consumer, either. So get a hustle, boys, and slam that brick.

The farmer should absolutely refuse to produce crops at starvation prices. Wherein lies the virtue of exhausting the fertility and strength of our soils, as well as the strength and the life of the farmer himself, producing crops the value of which will scarcely cover the cost of production? It is not only folly, but a sin, and rather than do this, and much rather than burn part of our crops after they have been produced in order to make the remaining part worth handling, we should get busy and have our own marketing machine, control our own crops and get a price for them that will remunerate and bring to the producer a net profit commensurate with his investment and with the risk, labor, worry and expense usually entailed in the production of a crop.

More than this you, the farmer, should not ask, more than this you do not expect, but this much—no more, no less—you should and do insist upon. So let fly with the ax—GET TOGETHER! Defend your manhood and your rights and hold for the equitable price.

Our Short Story

By Edward Vandervoort

"APA," said my daughter, Helen, "two weeks from today will be Halloween."

"What's Halloween?"

"Oh, papa, how ignorant you are!

Halloween is the evening when young folk bob for apples blindfolded, strike at suspended bags full of nuts or candy and throw peelings over their shoulders."

"What do they throw the peelings over their shoulders for?"

"Why, the skins in falling will take the shape of a letter. That letter is the initial of the person the one throwing it will marry. If a girl looks into a mirror she'll see the face of her future husband."

"Halloween is for girls, I presume."

"Not at all. It's for boys the same as for girls."

"Well, what about your party?"

"Mamma says that if you consent we will give it at the Cedars."

The Cedars is our country camp. We had returned to the city a month before, and now it was proposed to go back for Helen's party. She looked at me wistfully. I remembered what such things were to me when I was a youngster, and melted before that look. Indeed, I always melt before that look. I gave my consent.

This is what happened at the Halloween party. It came under my observation; but, not having a woman's perceptive faculties, I saw nothing in it. The story was told me by my wife, and I tell it here as she told it to me.

The young persons assembled for Halloween at the Cedars were between sixteen and twenty-two years of age, though those above twenty were men. Some of them being too old to bob for apples or knock down bags when blindfolded, it occurred to my wife to invite a sort of bluestocking clairvoyant or something of the kind, who was to tell weird stories suitable to the occasion. She was a Miss Somers, thirty-five years old and altogether an odd person.

On Halloween after dinner the young folk assembled in the living-room, at one end of which was an enormous fireplace. The night was cool enough for a blaze, and logs in plenty had been provided. The room was ceiled, the rafters above being left bare. On the walls were the heads of animals which I had slain, while several skins from the same source covered the pine floor.

Miss Somers seated herself in the center of the group before the fire, which gave the only light in the room, and began her stories. They all purported to have come under her own observation and were intended to show that for every boy and every girl there was somewhere in the world a mate.

Miss Somers had an eye on her listeners and observed on her right a young man, Joel Harker, in whom a love for the marvelous was strongly developed. On her extreme left, partly in shadow, sat a girl, Marjorie Winthrop, one of these feminine creatures made especially to love and be loved. Harker was twenty-one years old; Marjorie Winthrop was not quite eighteen.

To a close observer it was evident that Miss Somers was attempting to draw these two together. At times, willed by her, Joel would look from her to Marjorie; then after an interval Marjorie would look at Joel.

The young people listened to Miss Somers' stories and chatted till 9 o'clock, when they separated in order that each might go off alone in search of a Halloween experience. The camp was situated on the margin of a lake, surrounded by hills, the latter being part wood and part open. The young fellows, to whom the Halloween part of the affair appeared ridiculous, went into a room where there was a billiard table to play and to smoke. Joel Har-

ker disappeared, and it was not known to the party where he had gone. As for the girls, some went to their rooms, some out in the boats, while others scattered themselves on the shore. Where Miss Somers went was not noticed.

This roving about by night was facilitated by a full moon, which gave ample light.

From time immemorial there has been evidence of a power possessed by some persons to will others to do certain things. Most of these cases of mental domination have been either disproved or not proved. Nevertheless certain it is that Miss Somers was nowhere near Joel Harper or Marjorie Winthrop on that Halloween eve after 9 o'clock.

Joel after the breaking up went out on the veranda and sat down in the moonlight. Then he felt impelled to walk down a road that bordered the lake. At a place where the sheet of water was wider than elsewhere he came upon a boat. A pair of oars were in the bottom and, taking them up, he pulled out into the lake. There were two other boats on the water, one near the camp, the other directly across from the point at which he started. He felt no inclination to go to the former, but was moved to pull to the other.

Joel's mind was during this time fixed upon Marjorie. He did not know where she was and had no idea of finding her. Marjorie was thinking of Joel and admitted afterward that she could not help thinking of him. She chose the lake on which to receive her Halloween impressions, and being a good oarswoman, entered a boat alone, rowed along the shore, and carried a hand mirror with her.

Marjorie pulled into a cove, dropped her oars and, taking up her mirror, looked into it for the face of her "fate." The only face she saw was her own, and she had no reason to be displeased with it, softened as it was by moonlight. She kept her eyes fixed on the glass for some time, but no face other than her own appearing, she dropped it to enjoy a view of the water and the surrounding hills.

Occasionally a light breeze would ripple the water, breaking the rays of the moon into innumerable particles, but only for a few minutes, when the zephyr would die away, leaving the surface of the water and the leaves of the trees on the shore as motionless as before.

The stillness was broken close beside her by a fish, which jumped above the surface, either in sport or in pursuit of some insect near the water's surface.

Presently there came a distant sound of oars. Marjorie on leaving the camp had seen a couple of girls were getting into a boat at the landing. She inferred that the boat she heard contained these girls. The sound of oars grew nearer, coming in her direction.

It occurred to her to turn her back to any one who might be approaching, raise her glass as if expecting to see the face of a lover, then turn and feign disappointment at seeing a girl. Facing the shore, she looked straight before her. When the coming boat drew near and the sound of oars ceased she looked into the mirror.

A little shriek indicated that she had been surprised. Instead of seeing the face of a girl reflecting in the glass she saw that of Joel Harker.

Whether Joel and Marjorie came back to the camp together or separately, whether they remained out late or early, they never told. Neither was in the group that gathered about the dining table for a supper and to compare Halloween experiences. Those experiences were invented and were proportionately marvelous. The only real one was that narrated here, but not then. The absence of the two persons concerned in it was noted and

commented upon, but there were several other absences, and nothing more was thought of theirs than of the others. Indeed, on this occasion it would not have been proper to make minute inquiries.

The party did not break up for several days after Halloween, and during the remainder of the time there was a drawing together between Joel Harker and Marjorie Winthrop. They became inseparable and did not take any pains to conceal the fact. With this part of their mutual enthrallment Miss Somers surely had nothing to do, for she left the Cedars the morning after Halloween.

Some months elapsed after Helen's Halloween party before an engagement was announced between Joel Harker and Marjorie Winthrop. Miss Somers, accused by my wife of having bewitched them, would not admit that she had exercised any influence whatever on either of them. But my wife does not believe her, and I am of the opinion that my wife is correct. Marjorie confided to Helen that while listening to the stories by the fireside she felt impelled to go out in a boat and to remain where Joel had found her. She also confessed that her shriek at seeing a man's face in the mirror was not altogether genuine, for she felt all the while that she would see Joel's.

After the marriage I questioned Joel, but got no satisfaction as to his having been affected by Miss Somers. But a man will admit to a woman some things that he will not to another man. He acknowledged to my wife, feeling impelled to do what he did, but when I asked him about it he said that there was nothing in it. So there is no absolute solution to the matter.

Co-Operative Marketing of Produce

THE OBJECT of co-operative marketing is to obtain for each grower a better price than he would otherwise receive. This is accomplished only by eliminating the taking of profits by unnecessary middlemen. There is, however, no magic in the word "co-operation." Any co-operative association can succeed only by doing good business. The local buyers make money only by handling the products they buy and sell in an approved manner. If the co-operating farmers desire to save for themselves these profits that go to the "unnecessary" middlemen they must do his work as acceptably as he would do it, and if they would profit still more, they must do better work than he. All produce shipped must be put up right. Packages must be filled in first-class, workmanlike manner. Grades must be distinct and every grade measure fully up to or above its requirements. Confidence must be established with the markets. Full weight and full measure must be given every time, to everybody. Produce poor in quality must not be mixed with better quality. The best quality is powerless to carry along with it an inferior grade, though there be but little of it, while just a little poor quality will pull down a large quantity of high grade goods to its own level.

When farmers undertake co-operative marketing they must religiously observe these things and cater to the

trade they aim to supply. They must have the produce graded by an expert, and sold by one who knows markets and market requirements. Every member of a local marketing association must himself learn the general requirements, and he should not only take care that his own crops are properly graded and classified, but he should be vigilant in demanding that every other member do the same. All of them should guard the reputation of their association and the goods put out by it with great care and zeal. Then be a bit patient, take an occasional setback or disappointment philosophically (disappointments and failures come at times to the best regulated businesses), discharge the duties of your individual responsibilities toward your association, its officers and its business management, by exercising your rights as a member thereof, and success will be yours. There is not now one single farming community that can not be greatly benefited by an association for co-operative marketing. Two or three god men can be found in every community willing and able to manage such an association. To reform the marketing system, begin at home. And the sooner you begin the better.

Practice Leads to It

"What business are you going to put your son to, Mr. Brown?"
"I haven't decided yet, but judging from the hours he keeps, I guess he'll be a night watchman."

Practical Knowledge

Teacher—A cone is a solid surrounded by six squares. What is a cone?
Pupil—It's a sharp pointed thing full of ice cream.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, ETC.,

required by the act of August 24, 1912, of UP-TO-DATE FARMING, published semi-monthly at Indianapolis, Ind., for October 1, 1914.

Name of	Postoffice Address
Editor, J. A. Everitt.....	Indianapolis
Associate Ed., C. Hayes Taylor, Indianapolis	Indianapolis
Associate Ed., J. P. Stelle.....	Dahlgren, Ill.
Business Mgr., S. F. Everitt, Indianapolis	Indianapolis
Publishers, Equity Pub. Co.....	Indianapolis

Owners (if a corporation, give names and addresses of stockholders holding one per cent or more of total amount of stock):
J. A. Everitt, S. F. Everitt, both of Indianapolis, Ind. There are also twenty-nine other stockholders, each owning less than one per cent of the capital stock.

Known bondholders, mortgagees and other security holders holding one per cent or more of total amount of bonds, mortgages, or other securities:

The Equity Publishing Company has no bonds or mortgages.

(Signed) S. F. EVERITT,
Business Manager.

Sworn to and subscribed before me this 7th day of October, 1914.

(SEAL) DAVID F. SMITH,
My commission expires January 5, 1918.

Green Onions in Winter AND SPRING

By setting our Perennial Onion sets this fall—September and October—you can have the luxury of green onions any time in first thing in the spring, before bottom sets can be put in the ground. It is a perennial and once planted you the winter when the weather is mild and always the will have them always. A profitable market crop.

PRICE—By mail postpaid, 1 quart, only 20 cents; 2 quarts, 35 cents; 4 quarts, 60 cents; 1 peck, \$1.25. Remember, we prepay charges at foregoing prices. Per bushel, by freight or express, \$2.00.

O. K. SEED STORE, Indianapolis, Ind.

BALE TIES

Writing about a car load of bale ties obtained through the National Clearing House, delivered to Humboldt, Kas., Mr. A. R. Baxley, secretary, says: "Must say the ties are first class in every respect and give complete satisfaction. These ties cost us 80 cents, while the best we could do here was 90 cents, with quality not so good."

If you and your neighbors have not bought your baling wire you can hear of something to your advantage by writing
The Equity System Indianapolis, Ind.

Dependable Power For Every Purpose At Lowest Cost

The price you pay for an engine is an important consideration. But the amount of steady power the engine will develop on a given quantity of fuel is a consideration of still greater importance. Considering the amount of fuel used in any size of WITTE Engines to give their full rated horse power, you could afford, were it necessary, to pay more than my present low prices for my engines.

However, it is not necessary. My printed prices show that the first cost of a WITTE Engine is considerably less than any other strictly high grade engine of the same horse power rating. When it comes to durability and ease of operation, no engine, regardless of price, can show a better record.

A comparison of my prices with those of other strictly high grade engines will show the big saving I make possible to every engine buyer. A study of how and under what conditions WITTE Engines are made will show their advantages over other engines.

WITTE ENGINES

Kerosene, Gasoline, Distillate and Gas

Portable, Stationary, Skidded and Saw-rig Styles

SOLD ONLY DIRECT FROM MY FACTORY TO USERS

For the past 27 years I have done nothing but design and build engines. I now have one of the largest, best equipped and most economically operated engine factories in the country. I have a natural gas well which furnishes us free power, heat and light—a big saving in manufacturing cost. My one aim has been to produce an engine which would develop the greatest possible amount of steady power from the lowest possible consumption of fuel. A WITTE Engine at work will show you how well I have succeeded. But a study of the illustrations on this page will help to make clear to you why the WITTE is such a giant in power in any given size. Notice the length and thickness of the base which gives plenty of foundation grip and insures steady running without destructive vibration. It also permits fullest use of force of each fuel charge—one of the important factors that has made WITTE Engines famous for small fuel consumption. The WITTE is perfectly balanced and proportioned in all its parts so there is no excess friction to overcome—the highest possible percentage of fuel is converted into directly transmittable power. All WITTE Engines have detachable cylinders, 4-ring pistons instead of the usual 3-rings, automobile style vertical valves, automobile ignition, spark shift for easy starting, double weight, extra sensitive, positive governors and other merits without which no engine can now be really high grade.

My Free Book Makes The Whole Engine Question Plain

You should send for a copy of this book before you decide upon any make or size of engine. Tells you how to pick out the engine that is best suited for your work; how to judge any engine and all about my Direct-from-Factory Selling Plan. You can have any WITTE Engine you like on easy, reasonable terms if you wish—and every WITTE is sold with a positive 5 Year Guarantee. Just mail coupon today for the whole interesting WITTE Engine story.

What We Want You to Know and Why

Being a Few Words on Particular Matters

The New Land Bank of the Empire State

It will be remembered by our readers that the state of New York passed a law authorizing the organization of a land bank, composed of savings banks and building and loan associations, to provide a means for better rural credit facilities. In other words, to enable New York state farmers to borrow money on their farms on long time and easy terms of payment. The bank has been organized with forty savings and loan associations as members, who quickly subscribed the \$100,000 capital the law required. The board of directors have held a meeting and authorized its temporary officers to file its certificate of organization at once. As soon as the new bank opens its doors and begins business operations, farmers who have mortgages on their farms will be permitted to exchange them for land bank loans. The operation of the New York bank will be watched with a great deal of interest by those who are concerned with rural credit problems.

The High-Priced Beef Problem

A large proportion of the leading newspapers of this country are engaged in a vigorous but futile discussion of ways and means to lower the price of beef. The discussion is futile because as a rule those who engage in it are attacking the problem at the wrong end. Any effort to induce the farmers to grow beef cattle to sell at lower prices is not at all likely to meet with success. Even at present prices there is not a great deal of profit in beef production, though, if the farmers were assured that present prices would continue they would doubtless endeavor to produce more cattle at the price. They can not, however, be induced to produce more for a lower price. And, anyhow, the real problem is not lower-priced beef, but it rather is more beef at present prices. The problem the consumers are facing is to have a supply of beef assured, even if it does cost 25 cents per pound. And as we have said time and time again, the farmers by organizing and developing their own marketing system can assure themselves of prices which will justify increased production, and it can be done in no other way.

Crimson Clover as a Nitrogen-Storer

Nitrogen, that most valuable element of soil fertility, if purchased in the form of nitrate of soda or cotton seed meal, will cost the purchaser from 15 cents to 20 cents per pound, and is by far the most expensive fertilizer the farmer has to buy. Yet every farmer knows, or should know, that above every acre of his farm in the atmosphere there is 35,000 tons of atmospheric nitrogen which is just as valuable in the production of plants as that he buys from his fertilizer dealer, and it will cost him far less to obtain it. A crop of crimson clover has the power to collect this nitrogen from the air and store it in the different parts of the plant at the rate of from seventy-five to 125 pounds per acre. Now this means that an acre of good crimson clover, when the entire crop is turned under, will have a fertilizing value of from 400 to 700 pounds of nitrate of soda, or from 1,000 to 1,800 pounds of cotton seed meal. If the clover is made into hay and fed to the stock and the manure applied to the land but very little of this nitrogen is lost to the soil. Farmers in sections that can be made to produce crimson clover successfully should not overlook the importance of this plant in their farming operations.

Who is Running the County's Business

One of our contemporary farm journals recently published a very able editorial discussing the local self-government of the county, the smallest organized political division of our government. How many of our readers fully understand just what the county government does and how it does it? We will venture the opinion that there are many who do not know these very important matters, and that there are a great many more who do not know how effectively or economically the county officials are doing the work entrusted to their care. The tendency is to "leave it all to politics," which means that the county's affairs are administered chiefly by a political machine of a strictly partisan nature.

The county government levies, collects and expends the taxes on personal property and real estate. It takes care of bridges and roads. It looks after the county school system. It keeps records of deeds, wills and legal matters. It takes care of the impoverished. It preserves order, punishes offenders, and administers justice. The county government is a very important factor in local government, and should have the best attention paid it by every citizen. Yet in far too many instances the whole works is turned over to partisan politics. Moreover, not one man in fifty ever looks into what is being done, consequently there are at least opportunities for careless, inefficient or even dishonest administration of the county's business.

This offers another excellent reason why the farmers of every county should be organized in one business association, having local bodies in each and every community, where the business affairs of their county government can be taught and discussed from an economical instead of a political standpoint. Such a county organization could have a committee to investigate and report on all matters of general interest. Instead of partisan rule, there should be business rule. And with the journal above referred to, we believe the time is coming when the most progressive counties will be governed by a commission, elected by the people independent of party politics, and the commissioners to "hire and fire" the treasurer, auditor, sheriff, superintendent of schools and other officials. This will make county government what it should be.

To help bring this about, county government should be more thoroughly taught in the public schools.

make "Steels"
Indispensable to Every Worker
for Every Purpose

Twelve years of untiring effort and the expenditure of a Fortune, have brought my "Steels" to their present perfection.

Farmers, Mechanics, Dairy, Stock and Creamery Men, Laborers, Fruit and Truck Growers, Sportsmen—all have found my "Steels" THE WORLD'S GREATEST WORK SHOE—the best and only "year-round" "all-purpose," Light, Comfortable, WATERPROOF Shoe ever invented. Warm in winter—Cool in summer—Always dry and shapely. The Shoe for mud, sand, water, rain, snow, sleet, slush, rocks, field, furrow, stubble, mine, forest, street, road and every purpose where you need PROTECTION.

"Steels" are the only Sensible, Long-wearing Work Shoe—Play Shoe—School Shoe—HEALTH Shoe for active, growing boys. Keep the feet dry and warm in any season. See my "Steels" before you think of buying ANY shoes for your Boy.

"Steels" have saved more than TWENTY MILLION DOLLARS for Men and Boys. They will save Millions more for those who see this announcement, who accept my Free Offer—who TRY and WEAR my "Steels."

Save Health and Money

No more tired, blistered, calloused, chafed, swollen, aching feet. No more corns or bunions. No more hard, cracked, warped, twisted, worn, leaky shoes. No More Big Shoe Bills. No more Rheumatism, Lumbago, Sciatica, Neuralgia, Bronchitis, Colds, Coughs and other "wet-foot" troubles. No more loss of Time and Health. No More Big Doctor Bills. No more soggy, water-logged leathers. No more heavy, clumsy, sweaty, rubber boots, overshoes or "arctics." "Steels" are always light—always dry—always comfortable. ONE PAIR OUTLASTS THREE TO SIX PAIRS BEST ALL-LEATHER SHOES OR RUBBER BOOTS. Save \$10 to \$20 A YEAR IN SHOE MONEY. Made in all regular sizes and all heights—for Men, sizes 5 to 12; 6, 9, 12 and 16 inches high—for Boys, sizes 1 to 4; 6 and 9 inches high.

This Free Book

"The Sole of Steel" illustrates and describes this wonderful, money-saving, health-protecting shoe with its Special Process long-wearing, Adjustable Leather Taps—instantly replaced, when worn, for a few cents. The shoe of the light, springy step. The shoe that makes you sure-footed and tireless. The shoe that Protects Your Feet—your Health—your Future. It tells how YOU—or anyone—can TRY "STEELS" TEN DAYS, FREE—at MY RISK. Address your postal or letter to

Stock Raising in Florida

Florida's greatest resource is her live stock. You can raise, fatten and market stock at BAY VIEW at a fraction of what it will cost you here in the North. Equally as good for dairying. Ready markets and good prices. Grass for pasture the year round. Don't have to stable and dry feed six months in the year.

Soil is deep, rich, sandy loam—very exceptional for Florida. Sample of this soil mailed free with literature. Plenty of rainfall 12 months in the year. Irrigation is unheard of. Crop failures practically unknown. Two and three crops easily raised each year on the same ground. \$50 to \$500 profit per acre each year. Satsuma oranges, figs, pears, peaches, plums, grapes and all kinds of berries produce abundantly. You can also raise enormous crops of corn, oats, hay, Japanese cane, clover, sweet and Irish potatoes, sugar cane, celery, tomatoes, lettuce, cabbage, watermelons, cantaloupes, egg plant, cucumbers, radishes, turnips and all kinds of early profitable vegetables. One of the finest climates in the United States, both summer and winter. No sunstrokes in summer—no frosts in winter. Ideal salt water bathing, fishing and fishing. Lumber at wholesale prices. Good stores, churches and schools. WRITE TODAY FOR FREE BOOK, SAMPLE OF SOIL, MAPS, ETC.

Santa Rosa Plantation Company

Balanced Rations

The farmer who likes horses has good ones.

It is useless to put anything but fine fruit into the cellar for winter use.

There is nothing like a farmers' club to instill new life into a community.

Speaking of reforms, taxation reform is the one most needed and yet least talked about.

Plenty of apple and pumpkin butter on the pantry shelves means good times at meal times.

The two best and doubtless the two cheapest feeds to be raised on the farm are alfalfa hay and corn silage.

Right now is the beginning of the co-operative age, which will make co-operation another term for efficiency.

It may not be noble to supply the European armies with horses for war purposes, but there seems to be money in it.

The advent of cold weather and Jack Frost ought to make you think about the ice supply. Be sure and have one next summer when you need it.

Plenty of dry fuel in a convenient place is not only a necessity but a great deal of a luxury. Keep things comfortable around the farm in the uncomfortable weather.

Do not let the first snows come and find your young peach and apple trees without protection from rabbits and mice. Five minutes' worth of work may save \$5 worth of trees.

Keep the seed corn where there will be a free circulation of air until it is thoroughly dried. Perfectly dry seed corn can stand a very low temperature without injury to its vitality.

Every village and country town that knows what is good for it will provide a rest building and waiting place for the farmers who may have business within its limits. Get the community spirit into the town.

The first "back-to-the-land" movement of which we have any record was the one started by the sailors who rebelled against accompanying one Christopher Columbus, bent on seeking a new route to reduce the "high cost of living."

The shortage in the live stock industry may have much to do with the increase in the price of boots and shoes. The vegetarians have a substitute for meat for the body but have they a substitute for leather for the feet?

Let us forget, let us say again that every crack and crevice that gives opportunity for drafts in the barns and sheds and poultry houses should be closed up without any delay whatsoever. Grain is too valuable to use merely to keep animals warm.

The "buy-a-bale-of-cotton" movement has won wide recognition throughout the country. It is possibly an excellent thing. But we know that the "buy-a-bale-of-hay" movement that occurs on thousands of other farms every year is far from being a good thing, neither is it at all necessary. The hay for farm animals can and should be produced upon the farms.

How Money Was Made

Farmers have grown wealthy by the increase in the price of land. What has farmer Jones made on his 160-acre farm from the sale of crops?

The Grower's Protest

By E. M. Spies

TWO YEARS ago I received my first copy of UP-TO-DATE FARMING. At first I doubted the result. Today, however, I should not change any feature of it, because every department is interesting and helpful. One can not help but feel inspired over what has been done, accomplished, and what others are doing and planning to do.

But to the purpose of this letter: Marketing the garden produce has become a hard matter. The garden produce, however, in the Muskingum valley, is marketed by the truck growers' association, through their agent in Pittsburgh. This year, distribution was very, very unsatisfactory. The farmer whose tomatoes did not mature early lost the entire crop, because the association quit shipping on account of the slow demand and low prices. A last shipment of tomatoes netted one cent per basket. And the returns for cucumbers did not cover cost of hampers and labor. The early tomatoes paid, but the latter half went to waste on the vines. Owing to the summer drought the cabbage was a partial failure.

Again, it is the fluctuating prices which bankrupt. For that reason the grower deplores the first high prices early in the season, and the lamentable decline from dollars to cents when the banner packs reached the glutted market, and a cut price which made the grower swear and wipe the angry sweat from his brow. The big pickings, for which he received the least money, always cost more for labor, more team work, more baskets,

more "eats" for the extra hands. Just as fast as the fruit ripens, and the hopes of the grower rise, and he hopes for a big return, the cut comes, hardly enough to pay for the baskets.

Therefore, the first returns are a snare! Every truck grower in a community is after the almighty first, big dollar; for that reason the plants are pushed into the fields early in order to mature its first TWO-DOLLAR pack—unfair and extortionate to the consumer.

What caused the cut in prices? As I said before, the plants were set out early, matured, were picked, packed and shipped about the same time, reached the mart on the same day, consequently the market was congested and the fruit sold for any old price the commissioned agent could get for it that day. Next day was the same—next—next—until the market was cleaned up.

What the growers should demand is one sane maximum price for the fancy basket; one sane minimum price for seconds; one steady price for the season's output that will cover cost of production. The one price would give the grower a better chance for keeping on in the business. He could produce the truck self-sustained. It would not be necessary for him to borrow money to start each new year. In order to plant for another season money must be borrowed for seeds and fertilizers. Each year he is robbing Peter to pay Paul, in the uncertain race which does not pay. The children need clothes, and they must leave home to work in the city. Once the

(Continued on Page 18)

What Others Say and What We Think of It

"Horse stealing in Pennsylvania is now found to be an unhealthy occupation."—The Practical Farmer. In the old days out west it was positively fatal. To steal a man's horse or poison his dog was a capital offense.

"Co-operation is the surest hope of the American farmer. If all farmers are ever to enjoy prosperity and returns proportionate with their deserts they must win them through co-operation."—Prof. Paul Work, Cornell University, N. Y. Are New York state farmers showing their faith by their "Works"?

"Boiled down to the last analysis, the cause of the world war is rent, interest and profit. Eliminate rent, interest and profit and there will be nothing left for any nation to fight over."—Appeal to Reason. Eliminate rent, interest and profit, these three, and there will be little left worth fighting for.

"We do too much guessing on the farm. We guess about the weather, and we guess about the soil, and we guess about the seed, and we guess about the markets."—Home and Farm. We will undertake to give instructions so there need be no guessing about soils, seeds, and markets. We leave that one little affair of the weather to Home and Farm to regulate.

"The grain-belt farmer is hiring a new farm hand; one who never oversleeps in the morning, who never borrows the best buggy to take his girl riding in, who never grumbles at the food or eats the "boss" out of house and home. This new farm hand is the electric motor."—The Iowa Homestead. Of course we knew right away it wasn't a human being, without being told.

"Some day the average man is going to take a deeper interest in politics than he does now. He will find that he must."—Nebraska Farm Journal. But what a wonderful lot of trouble and loss the average man could save himself if he would do these necessary things before conditions get so bad they compel him to take action. Will we never learn that the "stitch in time saves nine"?

"The grain business is the most important vocation in the world today. The grain men hold the keys to the pantry of civilization. They are the commissary department of the human race. Why should the grain trade worry?"—The Price-Current Grain Reporter. Who are the "grain men"—those who grow it or those who speculate in it? This is a question for the growers to decide.

"Furthermore, very few farmers are willing to pay any fee for storage, preferring to sell their grain as they haul it rather than to do so."—Price-Current Grain Reporter. All because of the uncertainty of the price when they do sell. Very few farmers are willing to take less for their crops than they believe they can obtain. Fix it so it will pay to hold, without risk, and farmers will hold and store.

EDITORIAL

A Study in Fertility

ALL VIRGIN soils have a certain amount of soil fertility; that is, the elements required for the making of crops, and consists of certain chemical ingredients which, dissolved in soil moisture, are taken up by the roots of the plants and then through nature's processes built into plants. This natural fertility content of the soil becomes available slowly or rapidly according to the nature of the soil itself and its treatment by the farmer. In some soils there are only limited quantities of plant food which is in rapidly-available condition, and it is quickly exhausted. In other soils there is an abundance of the chemical elements necessary to the making of crops, but it is in such condition that with ordinary farming methods it becomes available very slowly and, while this does not permit of such abundant yields, it will last a longer time. Some of the elements are so abundant and so little is used by the average farm crops that the farmer need never to concern himself about their exhaustion or replacement. There are a few, however, which should deeply concern every farmer, no matter how fertile he thinks his land may be. The principal ones are nitrogen, phosphorus and potassium, with now and then soils deficient in lime, sulphur and magnesia. The farmer who would increase the productiveness of his farm from year to year while growing abundant crops must take into consideration the matter of increasing in his soil these particular elements. Merely making what is in the soil more available will, it is true, increase the yield, but it only hastens the time when the supply will be exhausted and must be replaced.

The productiveness of the soil in which the necessary elements occur in sufficient quantity to make a maximum crop also depends on the quantity of a substance called humus, which is produced from decayed vegetable matter. The decay of vegetable matter is Nature's way of restoring depleted soil fertility, and when we make an effort to increase the fertility of our soil we will do well to take lessons from her.

The supply of nitrogen, one of the most important of the elements of soil fertility and the easiest to be exhausted, can be increased by clover, cow peas, soja beans, and other plants which have the quality of taking nitrogen out of the air in its gaseous form and storing it in the soil in chemical

form. These crops, of course, should either be pastured or fed to live stock and the manure returned to the land in order to gain the greatest increase. Nitrogen thus secured is very readily available to plants and can be quickly exhausted as shown in the increase in the production after such crops are grown. Therefore a farming system devised to increase fertility should provide a rotation that will include the growing of leguminous crops once every three years.

It has been found that the leguminous plants draw the nitrogen from the air through the action of bacteria in the soil and that these bacteria can live and multiply best in a soil well supplied with humus. Thus we see again how important is the soil's content of humus. To maintain and increase the humus, liberal quantities of vegetable matter must be left to decay in the soil.

Many farmers who have not gone into the matter very thoroughly are of opinion that the nitrogen obtained by the leguminous plants is stored in the roots and in the soil itself. This is true only to a certain degree. A very large part of it is used to build the plant above ground, and if the clover is made into hay and sold from the farm this nitrogen is lost to the soil. Not only that, but the roots take from the stored soil nitrogen and use it in building the leaves and stems of the plants and thus some of the soil's own supply of nitrogen is lost. The increased productiveness after the growth of a leguminous crop is accounted for by the fact that the nitrogen which has been stored in the roots is readily available and shows plainly the following year. At the end of the second crop, however, the nitrogen content of the soil will probably be much below what it was before the leguminous crop was grown. We have known many farmers who have fully appreciated this fact and have bought the clover hay from their neighbors to feed the stock, carefully saved and spread the manure and thus gradually increased the fertility of their own soil while raising abundant crops.

If the potash and phosphorus is deficient, making the soil incapable of producing satisfactory crops, these elements can be supplied in the form of commercial fertilizer. There are a few soils that do not have a sufficient supply of phosphorus.

Any scheme for building up the soil must take all of these matters into careful consideration.

Politics and Business

IT IS all right to take an interest in government. In such a one as ours, where the people at least have the right to rule, it is essential to good government that the people, the masses of the people, all the people, exercise that right with thought, prudence, and a due degree of independence. This gives prominence to the elections, and the elections are preceded by more or less exciting campaigns. One of these campaigns is just now closing. By the time this paper reaches our readers the people will have an opportunity to decide by ballot who shall fill various important offices for another term and who shall represent them in various capacities. It is reasonable and proper that the campaign should be attended by interest and effort, closing with very general attendance at the polls and deliberate voting for the preferred candidates. That is the only way the people can rule. Unfortunately much of the excitement of modern election campaigns is not so much a manifestation of interest in government as it is the

work of candidates who seek election to office sometimes, it must be admitted, for personal gain; and many of those who help to work up the excitement look to future reward in the success of their ticket. But that, to a greater or less degree, is the natural result of partyism—of party organization.

Organization? Yes, that is the word. The parties organize so their adherents can exercise their united strength. Are like effective measures taken in business matters? Only in special cases, and there the effect is powerfully seen, often to the injury of the company's own customers. But in interests that are nation-wide those who are engaged therein seem to prefer helpless individual action that makes them the victims of all others. A nation-wide harvesting season is just closing. The official world is manifesting great interest in the result. "How much per acre?" "How much in all?" are on every official and trading lip. But the question, How much must it bring? is not heard. In all these things the producer seems uncon-

cerned. Beyond his own fields he takes but little interest.

Now comes the marketing. There is unity of action among the buyers, but the sellers, who during all the summer were the producers, are still unconcerned. Each knows what he has to sell, and his only inquiry is as to what the buyer will pay, and then his finishing act is to deliver the stuff.

How different all this would be if this great class of people would organize, unite, not to boost some exploited

object or to gratify some politician's personal ambition, but to work out a great national purpose, to make right a business wrong of a hundred years, to give the toilers in the fields what they have truly earned, to effect a better and cheaper distribution, and benefit both producers and consumers of the whole country—of the world.

Take an interest in the elections. It is right to do that. Be active in the campaigns if you will; but do not ignore or neglect the great business matters on which all depends.

Horses in the United States

THE UNITED STATES is a successful horse-breeding country, and our breeders are not satisfied unless they have the best. To be sure of the best, high-priced breeding horses have been imported, more or less every year, from European countries. For several years from 2,500 to 4,000 of the highest class stallions and mares have been brought into this country annually at a cost of from \$1,500 to \$2,000 per animal, and even more than that.

The European war, however, has now practically put an end to such importations. But the United States Department of Agriculture says American breeders need not worry over that as we now have as good horses in this country as can be found anywhere. A certain fascination seems to hang over the word "imported," but the department says that may now be dismissed, as we no longer need imported horses. This is specially true of draft horses, the breed most in demand in this country. The principal draft breeds are thoroughly established in the United States. Of these the Percheron prob-

ably outnumbers all other breeds combined, and grade Percherons, the product of pure-bred stallions crossed with ordinary mares, have proved very popular on our markets. The Belgian has also made great gains recently, but that breed is still comparatively new in America. It is found mostly in the Middle West, where the heaviest type of draft horses are in demand. During the past ten years approximately one hundred Clydesdales have been imported each year. This type is a favorite with those who wish style and action combined with draft power. The Shires are massive like the Clydesdales, but they lack action, though they are popular on the Pacific coast and in the Central West.

It is pleasant to know that we are fully capable of having the best horses without any more importations from Europe. And we may incidentally say the same is quite true of cattle. We no longer go to England and Scotland for shorthorn, Hereford, or Aberdeen-Angus cattle, as we have here as good breeders of this stock as we could get anywhere else.

Farmers Losing Money

WE DO NOT wish to say a dispiriting word to the farmers. There is no occasion to do that, for the people that create all the wealth certainly ought to enjoy a bountiful portion of it. Hence we would encourage rather than discourage. But conditions, or methods, rather, are such that the farmers do not get what belongs to them.

Mr. Thomas Coper, director of the South Dakota experiment station, recently declared before the Dry Farming Congress at Wichita, Kansas, that one farmer out of every three actually loses money, and the others do not make what they ought to make. He gives as a reason the fact that the farmers do not get their share of what the consumers pay for farm products. In this country, he says, the farmers receive only 45 to 55 cents of each dollar thus paid, while in most European countries in normal times the farmers receive from 60 to 65 cents.

In an investigation of groups of farms located in townships in Indiana, Illinois, and Iowa, continued the speaker, one farmer in twenty-two made a fair income, but one in every three had nothing left after deducting 5 per cent interest on their investment. This was not because they failed to produce or failed to market, but it was because, as shown above, somebody between them and their customers got what the farmers should have had. The remedy is in better and more direct marketing. Prices need not be higher and customers need not pay more, but the producers should get a more just portion of what the consumers pay. This would not increase the cost to anybody, but it would encourage agriculture and make the producers more efficient. It would accomplish what the "farm boosters" wish to accomplish, and it would do it in a much quicker and more definite way. Take another step toward better marketing and more complete distribution

Co-operative Farm Business

THERE is no question about the effectiveness and necessity of co-operation in farm buying and selling, particularly selling. In Lyon county, Kansas, the organized farmers send men into other states to find those who want to buy alfalfa and prairie hay, Kafir corn, cane, millet, corn, alfalfa meal, alfalfa seed, and anything the Lyon county farmers grow. The deal is made direct with the farmers, and in five months, so we are told by an article in the St. Louis Globe-Democrat, the association handled \$55,000 of business for its members. Among other things it sold 140 cars of hay at an average of \$3 a ton higher than could have been obtained through the ordinary methods of trade, and yet the purchasers paid less than they would

have had to pay had they bought of the regular dealers.

There are also about 300 co-operative elevators in Kansas. Before these were established the Kansas farmers paid from 8 to 12 cents a bushel for marketing their grain. This was the broker's margin and the elevator fees. Now these organizations handle the business on a 2-cent basis, often for less. The elevators are not large, but they have as efficient cleaning and grading machinery as the big ones, and are ample for the handling of all the grain of the members and sometimes others. Figures are not needed to show the benefit this is to the farmers.

These are only samples and serve merely as illustrations of what the farmers could do by truly co-operative business methods.

November First Feature Article

THOSE of us who confidently look forward to a grand federation of all farmers attach little weight to the name of the particular organization to which we, or others, may belong. The name of the society with which you may affiliate, provided it is a farmers' society, makes no more practical difference than does your surname. Be you Brown or Bjornson, if you are a farmer your interests are my interests, and we can work together just as well as though we both answered to the ancient and honorable name of Smith. That you are a granger, while I belong to the Farmers Society of Equity, need not deter us any more than the difference in our names.

We want to roll the same logs, and the fact that you have a peavy while I prefer a canthook need not hinder us from working together; while if neighbor Jones will give us a lift with a piece of hickory sapling, so much the better. You have chosen the grange—or some other farmers' society—because, of the various ones to which your attention has been called, it seems to you the most effective for the purpose; and for the same reason I have chosen the Farmers Society of Equity. Each of us has chosen the tool with which he thinks he can do most toward rolling the log—toward accomplishing the ends we all have in view—and, while we are spitting on our hands and getting set, I want to say a word about the tool of my choice; not in an attempt to change your preference but because we can work together to better advantage if we fully understand each other's methods.

I chose the Farmers Society of Equity because it already has a national headquarters and because of its simplicity and effectiveness. There evidently exists some confusion as to the difference between our society and the American Society of Equity, and I would like it understood, at the start, that we are two distinct organizations. I have no quarrel with the American Society of Equity nor with any of its members; but prefer the Farmers Society of Equity because it admits only bona fide farmers to membership; and I consider no one so well qualified to look after the farmer's interests as the farmer himself.

The greatest stumbling blocks in the way of all farmers' organizations have been commercial distrust and commercial incompetency; yet a certain degree of commercialism is necessary in order for any such organization to have permanent value. The aim of the Farmers Society of Equity is to give commercial aid while leaving each and every member absolutely free and untrammelled in the handling of his own products and money. Money is the root of distrust, yet it is the root we are all grubbing for; and the aim of the Farmers Society of Equity is to help uncover it while letting each man grab it for himself. Its basic aim is to have its officers act simply as "centrals" to put the members in touch with markets for their products and with the producers of the things they want to buy. The secretaries may be used as commercial agents; but it is not an essential (perhaps not even a desirable) feature of the Equity system.

The Farmers Society of Equity is not formed or calculated to handle money or goods; but as an organiza-

Co-operative Log Rolling

By W. D. Graves, Secretary of the Missoula County, Montana, F. S. E.

"Each may choose the tool with which he thinks he can do most in rolling the log, but the fact that one prefers a cant hook and another the peavy need not hinder all from working together."

tion to promote and help individual business dealings. It has no capital stock. If it desired that any of the subsidiary organizations engage in actual business transactions it becomes necessary to incorporate and issue stock, as several county organizations have already done; but such incorporations, though composed of Equity members and using the same name, are separate and distinct organizations. It is as though the various members of a church formed themselves into a company to engage in the manufacture and sale of fishing tackle. While the membership might be exactly the same, the church and the fishing-tackle concern would be separate and distinct organizations in the eye of the law. The church could not be held for the debts or deviltry of the fishing-tackle concern, nor could the latter be held responsible for the misdeeds of "the deacon's daughter and the minister's son."

While the incorporated Equity is a natural and beneficial growth, it is not a necessary part of the Equity system; which, as originally planned, is as largely social and political as commercial. By political I do not mean partisan, except inasmuch as farmers

constitute a party. It is the intent of the Equity to further the interests of the farmer through the aid of any and every political party that may be disposed to aid us. It is not for us to seek parties; but, by agreeing upon the things that we want, to make political parties seek us.

Our marketing system—or, more properly speaking, our system of keeping informed about the markets—is calculated to give that practical financial aid which will serve so well to bind us together with the bonds of self interest, and to enable us to federate with other societies, thus adding to our strength as a whole. By reporting, through our secretaries to the national secretary, the things we have to sell and wish to buy, we give him a knowledge of the supply and demand which he could get in no other way; and enable him to return us such information as we most need. As the labor and expense of formulating and putting in concrete form all these various items of information and of sending them out where most needed is considerable, national headquarters necessarily require organizations desiring to federate with us for the sake of benefiting by our system to pay an

equitable portion of that expense. Except for that there is no limit to our desire to federate with all strictly farmers' societies.

The feature of greatest money value in the Farmers Society of Equity is its advertising value. No business can be successfully operated without advertising; and the cost of advertising is the big item of difference between what the consumer pays and what the producer gets. Cost of advertising is not solely the amount paid for space in a printed paper, but consists of many items of money, time and effort not ordinarily so classed. If you spend half a day running around town seeking a purchaser for a load of hay, that time is chargeable to advertising expense just as much as though you had spent it splitting wood for the editor in exchange for space on his front page. The fact that you don't know the man who wants, for his own consumption, the box of apples you have to sell costs you and him a dollar or more, which you might have kept out of the pocket of the middleman had you known how to reach the other fellow direct. That dollar is advertising expense. The office of the Equity is to bring you together at a cost of, say, 5 cents, and save you 95 cents out of the dollar.

This, of course, can not be done without your help, but with your help it is easy. The peavy you have is a most excellent tool, but it will not roll a log unless you use it. The Farmers Society of Equity is one of the best, cheapest, and most effective advertising mediums that has ever been devised—a most excellent engine, but the members must furnish the gas.

As I write there lies before me one of the most popular magazines, open to a full-page advertisement costing, probably, \$1,000 per insertion; and it doesn't mention any particular article for sale nor name any one who sells anything. It simply tells of the usefulness of a certain line of goods, and is signed by the secretary of an association of manufacturers of that line. If you were to write to that secretary he would refer you to the dealers in that line who are nearest you. I have in mind half a dozen such associations of hard-headed business men who are out solely to make money; and there are doubtless dozens of others of whom I do not know. They are doing this thing because it pays, and they know it pays, though they have no possible means of tracing each dollar they put into it.

These associations are one of the most modern and profitable developments of modern business methods, and they are right in line with what the Farmers Society of Equity will be when it comes to be freely and fully used by its members. If our secretaries are kept fully posted by the members as to what the members have for sale, and if the secretaries take efficient measures to make it known that they are so posted, then parties wishing to buy your products will seek your secretaries and be referred to you. If a man who wants to buy a cow, a horse, or a load of hay knows that, by asking your county or local secretary, he will be referred to some producer who has just what he wants, then you and he between you will save the dealer's profit. In this way you will "cut out the middleman." It can not be done without some effort and cash expenditure on your part; but that cost will be only a small fraction of what you pay the dealer when you sell through him.

This constitutes the greatest direct money value of the Equity, and there are, literally, millions in it; but it is far from being all. We of the Farmers Society of Equity are seeking the same social and political betterments that all the rest of you seek. We all have the same logs to roll. Let us all lift together, whatever the names of our tools.

From the offices of local, district and state clearing houses come reports of supplies for sale. From the offices of wholesalers, retailers, millers, manufacturers and co-operative consumers' clubs come requests for supplies. Equity brings them close together.

THE FARM and ITS PROBLEMS

of Producing and Marketing

The Motor Truck and the Farmer

WHILE it is possibly true that there are numbers of farmers who could not make the investment in a motor truck a profitable one to them, yet it is undeniable that there is a large number of farmers who are in a position to do this but are not aware of the fact. Very much depends, of course, upon the kind of farm and its management. All farmers whose products are hauled to the local market in wagons, the process of which requires considerable time, would probably do well to investigate the probabilities of saving both time and money by the purchase of a motor truck to save time, labor and horseflesh. These things mean money to the farmer.

A certain farmer living within eight miles of the city of Indianapolis, Indiana, recently demonstrated that a good motor truck has about four times the delivery effectiveness of a pair of horses in time alone. This farmer had been accustomed to making one trip to the city in the morning and one in the afternoon. To accomplish this he must arise very early in the morning and not conclude his second trip until very late in the evening. This usually necessitated extra help on the farm for doing chores or placed an extra burden on the help already there. As time and labor was an item of considerable importance to this farmer, he after much figuring finally decided upon the purchase of a light delivery truck. Now he makes a trip to the city and back in about two hours, easily accomplishing four trips per day and has sufficient time to take care of his own chore work at home.

After finding that he could do from three to four times the hauling with the truck that he could do with the team and wagon, and that the truck reduced his labor expense, this farmer wondered whether the truck was costing him more to maintain than his horses and wagon. He kept an account to determine the facts and he found that the cost to him was just a little less than half the cost of the maintenance of horses and wagon, outside of the extra man's salary. Of course, when repairs are necessary for the motor, this makes the difference not so wide.

This farmer has stated that he further found that his produce reached the market in a much better condition and he was able to secure better prices. He made deliveries of live stock with his truck and had them in the market looking fresh and hardy and this made a difference when it came to price. Moreover, when hauling a heavy load of produce to the city with horses and wagon, it was too much a task for his team to draw a heavy load of supplies home. The motor has changed this and it will carry the heaviest loads both ways very readily.

One day in making a test, the truck made a total distance of ninety-six miles in one day from 5 o'clock in the morning until 5 o'clock at night, an average of eight miles an hour and carrying a load of 1,500 pounds. This rate included all the time without making allowances for loading or unloading. The actual average miles per hour covered by the truck in its actual running time was fifteen miles and four and one-half gallons of gasoline were used at a cost of 70 cents, giving a little better than twenty miles for each gallon used. On this one day the truck did sufficient hauling so that an extra farm hand could be used three other days on the farm and still the farmer would be as far ahead as if an extra man hauled with a horse team for three days. The following are the points of comparison made by this farmer which have made him a strong advocate of the motor truck:

THE MARKET GARDENER'S MOTOR TRUCK

The horse eats when he is idle, but the truck consumes nothing except when on duty.

When one horse of a team is sick, both are out of commission, and upkeep goes on just the same.

The motor truck always stands where it is left and never runs away and destroys property or causes trouble.

The motor truck can work twenty-four hours out of twenty-four when necessary, the horse can not.

Gasoline farming is becoming a matter of considerable importance and is one of the subjects that the up-to-date farmers must study if they would keep apace with the times.

Handling Corn Fodder

IN THE SILO is, of course, the proper place to put as much of the corn crop as possible, but when we have filled our silos and there is a portion of the crop which has been cut and shocked it is up to us to take as good care of the fodder as possible, as well as the grain. There is a vast amount of difference in feeding value between good bright corn stover securely stored early in the season and fodder that

has been permitted to remain out in the field. It has been a number of years since I husked any of my fodder in the open field, preferring to haul it out as soon as it has thoroughly cured and before it has been exposed to inclement weather. We do the husking at the barn and the weather concerns us but little. I am able to draw with a low-down wagon and a sixteen-foot rack a good half-day's husking into the barn, where it is husked out with comfort. When the day's work is done we have two or three good-sized loads of corn husked out all in the dry, the fodder stored away in the mows overhead and all waste scatterings of the fodder and shelled corn from husking lying upon the floor where the horse feed for the day can be gotten and the corn picked up for the hens. If I did the husking in the field much of this would be wasted, especially the fodder scatterings upon dry, windy days when work on the outside is very disagreeable. The study of economy in saving what I have worked so hard to raise prompted me to start this plan of caring for my corn fodder, and since practicing this method I would be loath to go back to the field method of husking. If I were not situated for this method of husking at the barn, I would not be long in arranging

matters in such a manner that I could practice the arrangement. I am employing a method of getting my fodder into the mows that is giving splendid satisfaction and whereby I am enabled to fill the mows full to the roof with but little manual labor. An ordinary hay sling is spread out upon the floor near to where we are husking and as fast as the fodder is bundled with ordinary binder twine the bundles are laid upon the sling. When we have a good two-horse load in the sling it is drawn to the hay mows by aid of the hay rope and team. Some may say that this will do on a small basis or where the acreage of corn is not very large, but that the average farm does not have room enough to store the usual crop of fodder. This is true. Some seasons as much as thirty or more acres of corn is husked on my farm in this manner and, of course, I can not get the fodder stored in the barn lofts, but we fill in and pile up until the mows can be crowded no more and then the rest is stacked up on the outside near the barn and feed lots, where it is easily fed out to the stock. The fodder that is stored outside is, of course, the first fed to the stock. Stacking bundled fodder is the next best method of securing this crop and pays so well that I see no reason for any fodder being left out in the field to be bleached out and having to be hauled through mud and snow to be fed after it has become almost worthless as far as its feeding value is concerned. In stacking fodder I always build my stacks in sections of twelve to fifteen feet, putting up a section at a time in order not to be caught with a stack open during an autumn rain. The first day's husking is shocked up similar to shocking in the field, only all together in a bunch about eight feet in width and twelve feet in length. This is thoroughly compacted in the shocking and forms the bottom or foundation of the stack. Upon this the stack is built, laying the bundles crosswise with the butt ends outward and filling the middles well with bundles. When this has been finished another section is started and the same process followed, drawing in uniformly until the top is reached. Then the stack will shed water and can be depended on to protect the fodder in a proper manner. When the stacks are completed and we are near the end of the husking season the fodder has settled and the stacks are retopped by the addition of a few bundles of fodder and a few weights thrown over the top to prevent them from being blown down. I always aim to stack my fodder lengthwise east and west in order to prevent the heavy prevailing winds from taking a broadside at them and causing trouble in the winter time. Fodder well cared for makes valuable feed for stock and they appreciate it over weatherbeaten stuff which has depreciated in value by being left out in the field. Some complain about their fodder, when stored in the barn, heating before the advent of freezing weather, but this has not been my experience. One thing is very important, and that is that the fodder should not be disturbed until it has thoroughly cured in the shock.—John Underwood, R. R. 2, Tunnel Hill, Ill.

Lowest Prices Ever Made On World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing Lasts as Long as Building Stands
Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end. Its cost per square is the lowest ever made. It has no up-keep cost. Always beautiful in appearance. Reducing cost of insurance.

EDWARDS Exclusive Tightcote Process

Makes Rust-Proof Roofing. The zinc spelter becomes practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingles, Grip Lock Roofing, Pressed Standing Seam or Roll Roofing, Ceiling, Siding, etc., is dipped in a bath of molten zinc, one at a time, after the metal has been stamped and resquared. The edges are galvanized as heavily as the sides. Not the space of a pin-point on steel exposed to weather. Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanized with your finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking, Protects Nail Holes—they can't Leak or Rust. Nails are driven through the under layer not exposed to weather—cannot rust. No special tools or experience needed to lay this Roofing; anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles Cost Less, Outlasts Ordinary Roofs and are your joy and pride forever. No matter what kind of a building you have in mind there is a style of EDWARDS Galvanized Roofing exactly suited to your needs.

FREIGHT PAID Lowest Factory Prices

Greatest roofing proposition ever made. We sell you direct—save you in-between dealers' profits. No matter what your building is, we simply ask the right

Our Country Contributors

NOTICE TO READERS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used as follows: \$3.00 for the best articles \$2.00 for the second, and \$1.00 for the third best. All others, 50 cents each.

How I Made One of the Finest Farms in My Community

(Awarded First Prize of \$3)

UST TWENTY-FIVE years ago next December I bought 160 acres near Center, Miss., for the sum of \$400 and interest. My brother begged me to refrain from burdening myself with this place, and many of the people in the neighborhood said it was not only valueless but was haunted in the bargain. Crying babies and shrieking people could be heard at all hours of the night. There was very little cleared land and it was all very poor. A small two-room log house with a log kitchen ten steps away was the home to which I took my wife and six small children. One of the first things I did was to buy lumber enough to add a kitchen to the house, preferring not to follow the Southern custom of separating the cookroom from the rest of the house, but wished to save as many steps as possible, for steps are costly on a farm, and particularly to a farmer's wife with a brood of children.

The former owner was apparently a shiftless sort of person, for he had never hauled a load of the yard manure. I began at once, and hauled over seventy large loads that winter and put it on, not the poorest, but the best of my land. Not satisfied with this in the way of fertilizer, I bought 1,000 pounds of animal bone to supplement the manure, for I intended to make my time pay me well on the land I cultivated.

That year I made several bales of cotton and plenty of corn for my own use; but when it came time to turn my crop into cash, I found that cotton was selling for about 3 cents to 5 cents a pound. Farming did not look like an easy road to fortune at that time.

The poorest of the land I sowed in cow peas and made cow-pea hay and found that my soil was improved in condition at the same time. I set out a peach and plum orchard, and in a few years we had more fruit than the entire neighborhood could use, and as there was no market I fed the surplus to the hogs.

The second winter I cleared more land and kept adding to my cleared area each winter, splitting the trees up into rails and putting my farm well under fence. After I had cleared sufficient new land for my farming operations, I sowed the old cultivated field into Bermuda grass and turned it into pasture. This enabled me to raise a satisfactory number of cattle, sheep, hogs, and also colts, for which I found a fairly good market. We kept a large flock of chickens and by care induced them to pay all the bills at the grocery store. By means of thorough cultivation, heavy manuring, careful stock husbandry, I managed as the years went by to improve the farm in every way and to bring up the productivity to a high point.

For several years my wife was a semi-invalid, and the doctor's bill and cook's wages formed what seemed a bottomless pit into which I must pour my surplus profits.

On last Sunday I was 60 years of age and besides what two hired men and I can work, which amounts to about forty or fifty acres, the entire

farm is in pasture and I have added to the original purchase until I have nearly two hundred acres. A spacious, comfortable and attractive farm house has replaced the old log cabin. A large new up-to-date barn has supplanted the old shed. We have money loaned out at interest and a cash reserve fund in the bank. All our children have received the advantage of a good education. One is a doctor, one is a minister, one a school teacher and farmer combined, and the other two are farmers. So you see that family taste runs to farming. It has been an uphill pull all along, but a fairly happy one, and we have reached what we believe a fair reward.

As for the house being haunted, the only specter of which we ever had any occasion to be the least concerned was the wolf at the door, and we managed to keep him entirely away.—W. J. McGee, Center, Miss.

How I Earned a Gasoline Engine

(Awarded Second Prize of \$2)

I WAS 15 years old when we moved to the farm and, being the oldest boy, I was put to work very young at various farm duties.

Being fond of machinery, I read in magazines how engines made the work easier, and I longed to have one. Father wouldn't hear to it, as the farm wasn't debt-free and mother was dreadfully afraid of having me work with gasoline. I told her there was danger in driving horses, too, and being careful was the secret of avoiding many accidents. Nevertheless, I resolved to strive for an engine myself. I did extra hauling when the team was not in use. Living a mile from town and having a telephone, I was successful in getting many hay-wagon and sleighing parties to take out, coal and moving to haul, also stone and gravel

for the borough's and township's roads, and underwear from a factory to families who did home work, etc.

When I was 18 years old I had \$200 saved and I selected my gasoline engine. The engine is in use now for two years and, in spite of my parents' objections, they are now proud of me and of it. Besides saving many dollars and a great output of physical energy on our own farm, I have also earned with it the price I paid for it and I am now saving for other modern farm implements, for I should like to farm all of my life.

Not all of our neighboring farms have engines and they give me much of their work. I crack corn and wheat in great quantities for 5 cents a bushel. For grinding hard grain I get 7 cents, and 6 cents for lighter grain. I also shell corn, shred fodder, make cider, run a drill press, run the washing machine, etc. Greatest of all helps is the milking of the cows by means of compressed air with the engine. Then, attaching the grindstone has brought me in a neat little sum. Farmers bring their knives of all kinds to be sharpened, at butchering time as well as mowing time.

Several acres of woodland belong to our farm, and during the winter I drive to the woods, gather loads of wood, saw it with the engine and have no trouble in finding sale for every load I take to town.

I have never regretted my first investment. I am not of age yet.—Daniel S. Moyer, Cressona, Pa.

A Safe Place to Buy

The advertising columns of UP-TO-DATE are getting more interesting and valuable each issue. Glance over the advertisements and whatever you can use now, or will need in the future, write for it. Let UP-TO-DATE be your store. Buy here because it is a safe place.

Our Advertisers Are Guaranteed

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

GALLOWAY'S 1915 ANNOUNCEMENT

LISTEN! Don't buy an engine of any make, kind, or at any price until you first get our new 1915 proposition and sliding scale, price-reducing schedule, because the more we sell, starting in September 1, 1914, and ending September 1, 1915, the more we still reduce our price figured on the volume of our sales for that period of time and you get the benefit. This schedule is of special interest to every man buying an engine. This special rebate based on a large volume of engines is worth looking into, to say nothing of the fact that we sell you a better engine on account of the volume we put out which enables us to manufacture them and make prices with which nobody can successfully compete.

More Power 6 H. P. \$98.75
For Less Money 6 P. \$98.75

All other sizes from 1 3/4 h. p. up to 15 h. p. proportionately low in price.

The Galloway Masterpiece 6 h. p. at our new low price is the power sensation of the year. It's positively the most engine for the money ever offered by anybody, any place, anywhere, at any time. It's positively A 1 in high quality of material, finish, design and workmanship. Absolutely supreme in power, simplicity and design, not over-rated, nor high-speeded, but large bore and stroke, and plenty of weight, low speed, built for long, hard, continuous service.

Our engines are made in our own great modern factories by the thousands, from the very finest materials, on automatic machinery, all parts standardized and alike and sold to you direct from the factory for less money than middlemen can buy engines no better at wholesale and in many cases not nearly so good, in solid-carloads for spot cash.

Don't Get Fooled

by the light, high-speeded, short-lived, cheap engine, nor by the high priced, ordinary engine with four middlemen's profits as the only excuse for that price. Check our engine point for point with them all, measure the bore and stroke, put them on the scales for weight, size them all up for simplicity, then test ours out side by side with every make and kind, regardless of who makes it or what price they ask, and we will leave it entirely to you to be the judge. Sold on thirty days' free trial. Every sale backed by a \$25,000 bank bond.

My Way of Selecting Seed Corn

(Awarded Third Prize of \$1)

I HAVE tried various ways and times of selecting seed corn, and my experience is that the best time is the fall of the year. I begin about the time that the husks begin to dry. I strap a sack across my shoulders and pass between a couple of rows, carrying the selected ears to the end and emptying them in piles. Then with a wagon I drive across the ends of the rows and gather them up quickly and take them to the barn for husking. I select my corn by type of stalk as well as type of ear, looking over the stalk carefully, noticing its size and height and the distance the ear hangs from the ground and the manner in which it hangs. I want a medium large ear, well drooped over, not high on the stalk, and the stalk must be sturdy and vigorous, with a large tassel. The other stalks in the hill and immediate vicinity are also noticed carefully. They should plainly show vigor and early maturity. After the corn has been taken to the barn and husking begins another series of selection is adopted as to manner of filling, length of ear, shape of ear, size, conformity to type, etc. I want a rather small cob with deep grains and the grains rather deeply dented.

After the corn is husked it is placed on patent racks or hung with twine over wires fastened to the rafters of the shed and sometimes I have a few bushels on which I leave one or two husks on each ear and hang them over wires by tying them together. The two things which I watch are to have a free circulation of air and protection from mice and rats.

I usually select a much larger amount of seed corn than I think I shall be able to use myself, for I find a ready sale for well-selected seed corn that shows quality in the field at harvesting time, and then, too, I want always to be prepared for replanting if that becomes necessary on account of weather conditions.

Experience, close observation, and intelligent care are the three essentials to seed corn selected in the field.—W. Guy Boland, Pendleton, Ind.

LIVE STOCK and DAIRY

Producing and Marketing

Marketing Live Stock

What One Community Did Co-operatively

ON THE twenty-third day of September, 1912, there was received at the offices of the Farmers Society of Equity, in Indianapolis, an application for membership-at-large from a couple of wideawake farmers living at Parkers Prairie, County Ottentail, State of Minnesota. These farmers, L. H. Brochman and George C. Hall, were the proprietors of Cora Lake Farm and growers and shippers of pickles and potatoes. By chance they became subscribers to UP-TO-DATE FARMING, and through it became acquainted with the Farmers Society of Equity and its co-operative marketing system. Having had troubles of their own in the finding of satisfactory markets, and after suffering from guesswork, taking chances, and various other ills which sorely afflict the independent shipper, they at once became interested in the Equity system, and after investigating its methods

and policies, took out a membership-at-large and straightway began marketing through this new channel, with the result that four months later these members applied for full instructions for organizing a local clearing house of the society, incorporating, building a warehouse, etc. The neighbors had become interested.

The assistance they asked for was promptly given them, and an organization was effected and chartered on the twenty-fourth day of February, 1913, with seventy-four farmers as members. The membership grew rapidly until the local is now the banner local of this organization in the United States, having 441 active participating members.

Organized for business, in a business organization, they began business operations without delay. It is not our purpose to attempt to portray their many and various experiences in marketing their different products. The account would be enlightening and helpful as well as interesting, and some time we hope to give it. Their story, however, has to do with their live-stock operations. Before they were two months old the local had shipped several cars of live stock. (It may be well to mention that during the same time they shipped a dozen or so cars of potatoes to the various markets recommended by the society.) Shipments were continued with the utmost satisfaction throughout the year of 1913.

The name and fame of the Farmers Society of Equity and the Parkers Prairie local spread throughout Ottentail and adjoining counties. Other locals were formed at Dent, Carlos, Richville, Vergas, Ottentail, West Union and Brandon, and delegates from these held a convention in June, 1914, and organized a district clearing house. In other words, they centralized and concentrated their business to increase its volume and thus command better attention and greater results. Mr. L. H. Brochman, originally of the partnership that became members-at-large, secretary of the Parkers Prairie local, was chosen business manager of the district clearing house.

When recently asked to give the methods of the co-operative shipping and marketing live stock, Mr. Brochman said:

"Since 1913 we have shipped 108 carloads of stock, and our members are now coming into a full understanding and realization of the benefits of co-operation in marketing their live stock through the Equity.

"In the first place they have learned that the individual local buyer is wholly unable to judge the real money value of the cattle he buys and, as he himself knows this, he buys on a wide margin to make himself safe. Only by shipping direct to the ultimate market can the farmer get what his cattle are worth. Our members know this is true, from nearly two years of operations, and it is a great relief to them to know they are getting full value for their stock.

"We have a continual market. That is, our members can ship any time their cattle are ready. There is no waiting for a buyer to come along. When the cattle and the farmer are ready we find a ready market. By our system we ship nearly every week. Our members who are finishing cattle keep us posted as to the number being fed and the approximate time they will be ready. In turn, this office keeps each member posted as to shipping dates, prices, etc. We have found this enables the farmer to take every advantage of the market.

"When cattle are shipped, every

head is marked and itemized and a record kept. Each animal is weighed separately, both at shipping point and market. We mark each one with a tin tag and the number stamped thereon. It is a comparatively easy matter to keep these records, so each farmer gets paid for his own stock. If any are lost in transit, we have a sinking fund to take care of the losses, so it does not fall heavily upon the owner. This sinking fund is obtained by a charge of 5 cents per hundredweight for all stock shipped. The local at Parkers Prairie employs a man to load and take each car through. Under the terms of the contract, this man must stand the first \$25 of any loss which may occur. This has proven a most successful means of getting the best of care for each shipment.

"In shipping hogs individual weights are not made, of course. The lights and the heavies are weighed separately, so that if there are differences in price at the market we can determine the proper apportionment of receipts. We issue a scale ticket to the farmer and the proceeds are pro-rated according to price and weights. The shrinkage is also pro-rated.

"Great oaks from little acorns grow," concluded Mr. Brochman, with his good-natured smile, "and the small amount my partner and I invested a little more than two years ago in a membership in the Farmers Society of equity has become a growthy plant whose fruits are being enjoyed by the worthy farmers of this and adjoining counties. Many farmers spend \$10 or more for apple trees and wait ten years for fruit. Even then they must spray and work and take chances on frosts, worms, wind and hail. The Equity plant costs but little and it begins bearing fruit in less than two months if it is properly cultivated. Every community, every county, every district, can and should have an Equity plant, for its fruits are abundant and profitable."

The era of co-operative marketing is undoubtedly at hand.

Live Stock as an Aid to Income

MANY FARMERS fail to realize the advantage of planning their farming operations to include the systematic raising of livestock. Below is the method of a neighbor of mine which has been successful.

S. has a farm of 300 acres, well located in a grain-growing district. About 60 acres of the farm is low and inclined to be wet, consequently good for grass, and it makes an excellent pasture. This farmer keeps 30 cows, 10 of them being dairy cows. The

other 20 he uses for production of "baby beef" by a method of his own. He turns the cows with their calves into the pasture as soon as grass comes and says: "Let them grow into money while I sleep."

The market for this stock is found in a city of 7,000 population. The meat markets of the city provided a good market for calves weighing from 200 to 300 pounds, and the butchers preferred buying stock from nearby farmers to getting their supply from the packers.

When fall came and grass was no longer abundant, S. marketed his calves at from 6 to 8 months of age, and weighing from 200 to 300 pounds, receiving from 10 to 12 cents per pound, "hog dressed," averaging 250 pounds each. In round figures he received \$600 for his calf crop with very little work, and no expensive feed. His dairy cows netted him \$300, and he sold corn to the amount of \$1,200.

This is not given as a practical example of scientific or highly profitable stock raising, but to show that under certain conditions live stock can be made a good investment on the ordinary farm.—A. F. Wagner, Norfolk, Neb.

THE POULTRY YARD

Producing and Marketing

Marketing the Poultry Crop

MARKETING poultry is somewhat of a science. There are many farmers and their wives, of course, who will not undertake to do otherwise than to dispose of their surplus poultry to the local dealer. In such cases the poultry is nearly always delivered alive. Consequently the marketing problem to such farmers is merely to catch the chickens at night and put them in a crate, take them to town the follow-

UP-TO-DATE FARMING, Indianapolis.

ing day and turn them over to the dealer. Even this kind of marketing can be easily improved if the poultry owners would be careful to raise uniform stock and have them of a uniform size and color and deliver them in good condition. For fine, even lots the owner should be able to make the dealer pay a better price than the ordinary poultry obtains. If the dealer objects to paying a premium for good stock, the proper thing to do is to take the chickens back home and write to some responsible poultry dealer dealer in a nearby city for full instructions as to making shipments, etc. Then let them ship their own poultry once and the experience will be such as to convince them that good poultry will always command a better price. With this information at hand, if the farmer does not care to bother with making his own shipments he can have convincing arguments to compel the local dealer to pay him what his birds are worth.

The farmer and the farmer's wife should make a study of marketing as well as growing the poultry products. Get whatever advice and instruction you can from your experiment station and get in touch with dealers in markets to which the poultry of your community or county is ordinarily sent and learn just what it is that brings the best price on those markets and how it should be prepared. Poultry commission men are always glad to give instructions along this line to any who desire to ship.

Still a better way would be for the farmers of a community to organize a local society and have their business manager to take care of shipments and returns. The additional quantities sent and the increased amount of business done will command greater respect from the handlers and better prices and better treatment, with less trouble, than can be obtained by the individual farmer.

Poultrymen who grow poultry expressly for the market and in any quantity usually do their own shipping. If chickens are shipped to the market dressed great care should be taken in the killing and bleeding, so that the birds will present a most pleasing appearance when they are received on the market. This will make a vast difference in the price received by the shipper. Possibly more than one-third of the dressed poultry going into the markets presents a bad appearance, due to the ignorance or carelessness in handling before leaving the shipper. This results in a net loss of from 2 to 5 cents per pound or perhaps more, and is a loss which could very easily be averted. Poultry that is not finished right, killed right and packed right not only loses its good appearance but its flavor, and the discriminating city buyers who are able and willing to pay good prices pass them by and they must be sold to the people who can not afford to pay the high prices and are looking for just such "bargains."

The best way to kill and bleed a chicken is as follows: Grasp the chicken when killing by the bony part of the skull, do not let the fingers touch the neck. Make a small cut with a small, sharp-pointed knife on the right side of the roof of the chicken's mouth just where the bones of the skull end. The chicken, of course, should be hanging by the feet and then left to bleed. For dry picking, thrust the knife through the groove which runs along the middle line of the roof of the mouth until it touches the skull midway between the eyes. Always use a knife which is not more than two inches long, one-fourth of an inch wide, with a thin, flat handle, a sharp point, and a straight cutting edge.

In marketing poultry the poultryman must study his market. Markets

are like individuals and have peculiar and individual tastes. What will suit one market and bring a good price thereon will not suit another. The poultryman who wishes to get the best results must grow the kind of poultry his market desires and finish them as that market requires.

Boston is an excellent market for brown eggs, fancy capons, and large roasting ducks.

New York city is also a good duck market. White eggs find a greater favor in New York. Broilers bring higher prices per pound than capons.

Philadelphia is a good market that wants small birds for the private trade and large birds for hotels. Small capons are not wanted in Philadelphia. To bring best prices they should weigh at least seven or eight pounds.

Kansas City and St. Louis are both good markets and, like Chicago, are not so discriminating as eastern markets; they get every kind of fowl there and have almost every kind of demand for them. Prices, however, are not so good as in the eastern markets, but in all markets the best birds bring the best prices.

For the individual who raises a special kind of poultry in large quantities and knows how to prepare them for his particular market, it is as well perhaps for him to do his own marketing. For the average farmer, however, it would be best to organize and have the marketing done co-operatively by an expert.

November Poultry Notes

Fifty per cent of the pullets should be laying by the fifteenth of this month, provided a daily ration of green bone has been provided, the feeding of green stuff not neglected, and ample room allowed for the increase of your stock.

Pullets will not lay regularly at first; an interval of two to three days sometimes elapsing between the laying periods.

By feeding fresh cut green bone to your yearling stock, a goodly number of eggs should be produced during this month by the molters, as the laying season is now on.

If you do not get eggs during this month something is radically wrong with your method of feeding or with the age or health of your birds.

Cover over the cracks between the boards of your poultry house and see that the sash fits snugly in the frames. A draft of cold air has worse effect on fowls than if they roost in the open.

Six inches of cut straw or leaves upon the bottom of your scratching pen and a handful of millet seed will furnish exercise for a flock of a dozen birds throughout the day, and by giving a full meal at night, an hour before roosting time, you will get the best results.

If a noonday feed is indulged in, it should consist largely of vegetable food.

Green bone can be given in the morning, alone or in a mash, or it can be given as a noon feed in connection with the green stuff.

It is always best to give whole grain at night, and don't forget to see that the grit box is filled with a good quality of coarse grit.

Learned by Sight

"What is a cape?" the teacher asked of the geography class.

"It is a thing women wear and it looks like a coat without any sleeves," answered the head pupil.

Wished to Save Himself

Judge—So you acknowledge you stole the pig?

Prisoner—Yes, I stole it, boss.

Judge—Then I'll have to punish you. If I let you go none of us would be safe.

"Farming is different from some of the other professions in that every one engaged in it is eager to help every one else."—The Practical Farmer. Now if that were only true farming would be different, sure enough. And if, in helping others, they could also help themselves at the same time would it not be worth while? UP-TO-DATE FARMING has for years been showing farmers how to do this, and has helped them to do it. That is why UP-TO-DATE FARMING has earned its worldwide reputation of being a paper that is different.

Helpful Hints for Homefolks

LIFE'S COMMON THINGS

THE things of everyday are all so sweet, The morning meadows wet with dew; The dance of daisies in the noon, the blue Of far-off hills where twilight shadows lie; The night with all its tender mystery of sound And silence, and God's starry sky! Oh, life—the whole life—is far too fleet, The things of everyday are all so sweet.

The common things of life are all so dear, The waking in the warm half gloom To find again the old, familiar room; The scents and sights and sounds that never tire, The homely work, the plans, the lilt of baby's laugh, The crackle of the open fire; The waiting, then the footsteps coming near; The opening door, the handclasp, then the kiss.

Is Heaven not, after all, the now and here? The common things of life are all so dear.

THE HOME BEAUTIFUL

THE SPIRIT OF PROGRESS is abroad in our land, and nowhere is its presence more easily discerned than on the farm and about the farm buildings.

Less than a score of years ago in many farm homes but little thought was given to neatness and attractiveness of the buildings, while the doorway, front or back, was by no means "a thing of beauty." Neglected shrubbery clamored for recognition, trees remained untrimmed, houses and barns unpainted. But this is a day with an "onward and upward" trend, and we have come to realize that in order to have "a true home in which the light of love doth dwell" our environments must be sweet, wholesome and attractive.

The old farmhouse, if rightly cared for, is the ideal home. There is nothing like it. The memories that we hold of it and its homely little joys and simple pleasures are priceless.

From no city home, however elegant, does there emanate that sweet, homey atmosphere to be found in the farmhouse. No city lawn of velvet smoothness can compare with the big, generous dooryard, sloping down from the house to the road, dotted here and there by wide-spreading trees, and besprinkled by old-fashioned shrubbery and flowers. Such homes tend to give us good citizens, and there is not a home in this or any other country that does not need the civilizing and refining influences that spring from environments that are wholesome and beautiful, if its inmates are to be at their best.

Just now we need to give some thought to this in order to be ready for the spring leaves. Dead flower stalks and other debris should be raked up and burned. Here and there little patches on the lawn should be spaded and fertilized, and in these mellow plots there should be planted the crocus, jonquil, iris, narcissus, tulip and hyacinth. We speak particularly of these because they give us the first glories of the spring and continue to blossom year after year with but little care.

As we write, we have in mind an old-fashioned front yard where every spring one can scarcely step from the paralleled pathway without treading on flowers. All colors are found here. Before the snow has gone entirely the air is full of delightful fragrance. The whole neighborhood gives homage to the beauty of the place, and many hearts have been gladdened and many comforted by its cheeriness and brightness.

Our dooryards, front and back, may be made as beautiful as this by very little labor, and bulbs and seeds are

really very inexpensive. Indeed, the bulbs can be had for a little work, as may be seen by the very liberal offer made on this page, or by simply renewing your subscription, or, if you are not, get a subscriber to UP-TO-DATE FARMING by becoming one in advance. You can not afford to be without it or the pleasure to be gotten out of the flowers. Later on we will talk of the flowers to be planted in the spring, and in the meantime we who have not done so will begin right now to get ready for the home beautiful, which should be ours next year if we do not already possess it.

HOUSEHOLD HINTS

White paint, when dirty, should be washed with skimmed milk and the dirt will be easily removed. Colored paint should be washed with cold tea.

Tea and coffee stains can be removed if allowed to soak in buttermilk, washed in cold water and dried in the open air. Another effectual treatment is rubbing the stain well with powdered borax and pouring boiling water through it.

Scratches on furniture will disappear if rubbed well with a solution of equal parts of linseed oil and turpentine. Rub this well into the scratches and then polish with a soft cloth.

If the flatiron is rough rub it with coarse salt. A small piece of beeswax tied up in a cloth and rubbed upon the iron occasionally will also keep it smooth.

When beating the whites of eggs for any purpose it will be found to be a saving of time, and the eggs will be stiffer and nicer in every way, if a

pinch of salt is added before the beating begins.

Clear, black coffee will clean black cloth if diluted with water containing a little ammonia.

Cloves, if bruised, may be laid among woollens which are stored away. Moths will not come near this scent.

Salt, moistened with vinegar, will remove burn marks from enameled saucepans and dishes, but they should first be soaked in cold water for a few hours to loosen the stains.

Painting the last cellar step white will save many a fall.

Ink stains, if taken at once, can be removed by sprinkling and rubbing salt on the spot, followed by a brisk scrubbing with vinegar.

Equal parts of household ammonia and turpentine will take out paint stains. Saturate the spot three or four times, then wash with soapy water.

For deodorizing vessels in which fish, onions and the like have been cooked, wash the kettle, dry it and then turn it over a handful of burning paper. When the paper is consumed, scald the kettle, dry it and it will be sweet.

Do not open the oven door to look at your bread until it has been in the oven for fifteen minutes. If it is browning on top too fast, lay brown paper over it or turn a tin over it. Let the loaves stand in the pans, after baking, for about ten minutes.

It is said that one can easily rid the house of mice by putting branches of peppermint or the essence around where the mice come. Repeat the process every two or three minutes.

Our Big FREE CATALOG NOW Ready

Send for your copy today. This book is the economy guide for housewives. It tells how you can live better with less expense. It shows how you can secure Rockers, Tables, Dressers, Couches, Chinaware, Glassware, Rugs, Curtains, Wearing Apparel, etc., with your purchases of household needs without extra cost.

How You Will Enjoy Reading by the Rayo Lamp

No tired eyes or eye strain from its soft yet brilliant, steady glow, which floods the center table so that all the family has a good light by which to read, sew or study.

Experts everywhere agree that the light given by a kerosene lamp is best for the eyes. 3,000,000 middle western homes say there is no lamp like the RAYO—that it gives the most satisfactory light in either city or country homes. Ask your dealer for demonstration. Illustrated booklet on request.

What is Now the Fashion

New and Practical Garments for Women and Children

6873—LADIES' DRESS. The four-gore skirt has no fullness at the top, but is fairly roomy at the lower edge, where it measures 2½ yards. Sizes 34 to 44 inches bust measure. Medium size requires 3¾ yards of 44-inch material. If trimmed with crosswise bands, three-eighths yard extra will be needed. Also one-half yard of 27-inch material for collar and cuffs.

6878—LADIES' BLOUSE. Sizes 34 to 44 inches bust measure. Medium size requires 2¼ yards of 36-inch material, with one-fourth yard of 27-inch contrasting goods to trim.

6876—TAILOR-MADE SKIRT. The skirt has two gores. The closing is in the center of the front and the lower edge measures two yards around the hem in the medium size. Sizes 22 to 32 inches waist measure. Medium size requires 2¾ yards of material 36, 44 or 54 inches wide.

6902—HOUSE APRON. This is a one-piece model, the front covering the entire dress, while the back has only two straps at the top. The two parts are buttoned together. Large patch pockets complete the garment, which is very useful for hard work. Sizes 36, 40 and 44 inches bust measure. Medium size requires 3¾ yards of 36-inch material.

6870—GIRLS' APRON. The garment is in one piece. Sizes 4, 6, 8, 10 and 12 years. Medium size requires 1½ yards of 27-inch material.

6871—BOYS' DRESS. With this blouse are worn small trousers which are straight and open at the knee. This design is suitable for wash goods or woolen fabrics. Sizes 2 and 4 years. Four-year size requires 2¾ yards of 36-inch material.

6890—DRESSING SACQUE. Cut in sizes 34 to 44 inches bust measure. Medium size requires 2¼ yards of 44-inch material and three-fourths yard of ribbon.

6872—KIMONO. Cut in sizes 34 to 44 inches bust measure. Medium size requires 4 yards of 40-inch material.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Free Trip to the Panama-Pacific Exposition

Do you want to obtain a free trip to the Panama Exposition? Of course you do. Everybody does. The Panama Canal is the world's greatest achievement. There is nothing to compare with it, and a grand World's Fair to celebrate the realization of this dream of four centuries is eminently appropriate.

A Party of One Hundred or More Will Be Sent Free on This Magnificent Trip

Will you be one of the party to enjoy the greatest sightseeing trip in the world without one cent of cost to you? In no sense is this great exposition simply a local California affair. Millions are planning to make this trip. Those who fail to visit California in 1915 will miss an opportunity of a lifetime. It is different from any other world's fair. It will surpass all others in every conceivable way.

Birdseye View of the Exposition

We mean exactly what we say when we state that you will go on this magnificent trip free of charge. It will not cost you one cent. But we are going to send only a limited number. This is not a voting contest or a chance scheme. It is truly the most wonderful offer ever made before. Make up your mind that you are going to "Frisko" next year and write us at once. Address all communications to

Up-to-Date Farming Indianapolis Indiana

FEATURES OF THE GREAT FAIR

Thirty-one countries will have great exhibits. Over forty states, besides Hawaii and Porto Rico, have pavilions along the water front on the avenue of states. The "Zone," devoted to amusements and fun, covers sixty-two acres. It will eclipse the "Pike" of St. Louis and the "Midway" of Chicago. The greatest military bands of the world will be there. A miniature "Panama Canal," correct in every detail, showing how the great canal carries the ships from ocean to ocean, will be presented. Sixteen million incandescent lamps will be used to illuminate "Yellowstone Park," reproduced in miniature. Also there will be the "Cascade of the Nymphs of Fairyland," with 30,000 gallons of water tumbling every minute. Hundreds of educational features, exhibits, art, beautiful structures, etc., will give every one a most wonderful sight.

CUT THIS OUT

UP-TO-DATE FARMING, Indianapolis, Ind.:
Gentlemen—I have read your announcement concerning the free trip to the Exposition and would be pleased to have full particulars.

How the Public Profits By Telephone Improvements

Here is a big fact in the telephone progress of this country:

Original
Bell Telephone
1876

Standard
Bell Telephone
To-day

Early
Telephone
Exchange

Typical
Present-day
Exchange

If City Wires
Were Carried
Overhead

800
in Underground
Cable

This progress in economy, as well as in service, has given the United States the Bell System with about ten times as many telephones, proportionate to the population, as in all Europe.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY
AND ASSOCIATED COMPANIES

One Policy One System Universal Service

Hand in hand with inventions and developments which have improved the service many fold have come operating economies that have greatly cut its cost.

To appreciate these betterments and their resulting economies, consider a few examples:

Your present telephone instrument had seventy-two ancestors; it is better and cheaper than any of them.

Time was when a switchboard required a room full of boys to handle the calls of a few hundred subscribers. Today, two or three girls will serve a greater number without confusion and very much more promptly.

A three-inch underground cable now carries as many as eight hundred wires. If strung in the old way, these would require four sets of poles, each with twenty cross arms—a congestion utterly prohibitive in city streets.

These are some of the familiar improvements. They have saved tens of millions of dollars.

But those which have had the most radical effect, resulting in the largest economies and putting the telephone within everyone's reach, are too technical to describe here. And their value can no more be estimated than can the value of the invention of the automobile.

Tested Recipes

HOMINY DROP CAKES—Stir a tablespoonful of butter into two cups of boiled hominy while still hot; add two well-beaten eggs and a teaspoonful of salt; mix well and have a greased biscuit tin ready and drop the batter on it by the spoonful. Bake in a quick oven until brown.

CORN MUFFINS—Dissolve a half teaspoonful of soda in a half pint of sour cream and mix with it one pint of cornmeal. Add a teaspoonful of salt, a tablespoonful of lard and three well-beaten eggs. Beat hard and bake in well-greased muffin tins.

SALT RISING BREAD—Take a pint of new milk, put it on the stove and stir in cornmeal to make it as thick as mush. Set it in a warm place over night. In the morning it will be light. Put four quarts of flour in a bowl, pour in the mush and mix with equal parts of warm milk and water, then add a tablespoonful of sugar and one of salt. Make a stiff batter, cover and keep it warm. In an hour it will be light. Then work in flour to make a stiff dough, let it rise again, mold into loaves, put in greased pans and bake.

CREAMED EGGS AND BREAKFAST BACON—Boil three eggs hard and cut them in slices. Arrange them on a platter and pour over them a cream sauce made by stirring a teaspoonful of butter blended with one of corn starch into a cupful of boiling milk and cook until it thickens. Season with pepper. Dish and arrange thin slices of crisp, well-cooked breakfast bacon around the edges of the platter.

BEEFSTEAK WITH OYSTERS—Broil a tenderloin steak; season with salt, pepper and butter. Take a pint of fresh oysters, drain off all the liquor, put them in a saucepan with a teaspoonful of butter and a cupful of rich milk and let them boil up once and pour over the steak.

LIVER CROQUETTES—Mix a tablespoonful of flour with the same amount of butter; add half a teaspoonful of milk and a well-beaten egg. Cook until thick and smooth. Remove from the stove, season with a teaspoonful of white pepper and a teaspoonful of minced herbs; add a pound of cold boiled liver minced fine and half a cupful of cracker crumbs. Set aside to cool. Form into croquettes; dip in egg, then in cracker crumbs, and fry in hot fat.

ENGLISH PLUM CAKES—Cream one cup of sugar with a half cup of butter, add two well-beaten eggs, a half cup of milk and four cups of flour, into which two teaspoonfuls of baking powder have been sifted. Wash and dry thoroughly one-half cup of currants, warm and dredge with flour, add to the batter and mix well. Bake in small muffin tins or patty pans.

APPLE SNOW—Pare, core and stew eight medium-sized apples, then press them through a sieve. Dissolve two tablespoonfuls of gelatine in a little cold water and add to the apples, with one teaspoonful of sugar, the juice of one lemon and one teaspoonful of nutmeg extract. Froth the whites of six eggs, add the apples by the spoonful, beating all the time. Serve immediately.

CREAMY SAUCE—Beat half a cup of butter to a cream, add one-fourth cup of sugar gradually, heating all the while. When very light and creamy add one-half cupful of cream a little at a time. Place the bowl in a basin of boiling water and stir until the sauce is smooth and creamy. Add the juice and finely cut rind of a lemon and serve.

PUZZLE Can You Name the Five Advertisers Represented Below?

A Little Effort Will Win a Valuable Cash Prize

Explanation

The rebus represents the names of five advertisers in this issue. For instance, the first is Stiver Manufacturing Co. Can you solve the others? Look over the advertisements carefully.

Conditions

In addition to the solution of the puzzle each contestant must write a letter telling which advertisement in this issue you have answered, and why. In case of a tie the best letter will get the prize.

Prizes

First prize to correct answer and best letter \$3.00
Second prize 2.00
Third prize 1.00

All answers must be received not later than Nov. 20. Mail answers separate from other matters, such as subscription orders, etc.

Winners Oct. 1
Puzzle

First Prize—J. Morris, Holton, Ind.
Second Prize—Elmer S. Runnman, Hellertown, Pa.
Third Prize—Mrs. Emma Morton, Elbridge, N. Y.

Address Puzzle Editor, Up-to-Date Farming Indianapolis

Prize Winners Announced in Dec. 1 Issue. Watch for Another Puzzling Puzzle.

A Splendid Offer

WE WANT all those who are interested in our Woman's Work and Welfare department to help us to interest others, and this can best be done by getting them to subscribe for UP-TO-DATE FARMING. It is our purpose to keep this a very strong department, full of good things every issue.

To every one who sends in a 50-cent subscription to this paper we make this following very liberal offer: In addition to the paper one year we will send any one of these premiums: One-half dozen hyacinths, or twenty-five tulips, narcissus, jonquils or crocus, or twenty iris, or three Chinese sacred lilies, all safely packed and promptly delivered. Or for one new subscription at 50 cents we will allow a choice of any two patterns selected from our fashion page. These patterns are of the very best made.

Be sure to make plain your choice of flowers, and if you name patterns as the premium preferred, do not fail to give number of pattern and bust measure.

These are special offers to readers of Woman's Work and Welfare department. Address WOMAN'S WORK AND WELFARE DEPARTMENT, Equity Publishing Co., Indianapolis, Ind.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50 cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE EDITOR would often like to make comments on special features of many letters, and such comments would no doubt be interesting to the general readers and perhaps helpful to the writers, but every comment takes space and we prefer to reserve all the space for letters so that we can print as many of them as possible. We certainly do appreciate every letter and every writer.

DEAR CADETS—I live on an 80-acre farm in Summit county in the northern part of Ohio. My home is about eight miles from Akron, our county seat. It is noted for its great rubber manufacturing. The country here is rolling and has some woods. The principal crops are corn, wheat, oats, potatoes and hay. The smaller grains are cultivated also to some extent. I like farm life. I am 14 years old and am in junior high school. I would rather go to school than do anything else. I study Latin and am going to learn German. Reading is my hobby, and as father has a well-stocked library I spend all my leisure moments reading. I am a lover of music, too, and can play well. Would be pleased to receive a card, letter or photo from every Cadet. All will be welcomed and answered.—Gladys Carr, Lake, O.

DEAR CADETS—I am a farm boy nearly 16 years old. I am a high school student and will commence my second year this fall. I take UP-TO-DATE and think it a dandy paper. I would like to be a Cadet and would gladly exchange cards with all who write.—Martin Baeschlin, Greenwood, Wis.

DEAR CADETS—May I join your class and become a Cadet of Equity? I enjoy reading the letters of the boys and girls living in the different states and hope that I may be a Cadet in the future. We take five farm papers, but UP-TO-DATE FARMING beats them all. I live eight miles south of Kansas City, the commercial center of the west. Missouri is a grand state, but it has been very dry the last three years. I am a girl of 22 summers and have lived on the farm since I was 3 years old. I like to put up fruit and I also like to crochet and do all kinds of fancy work. I don't do any work out of doors, but I think I could if it should become necessary. We live on a 110-acre farm and my brothers have procured over 100 acres of wheat land for next season. Why don't the farmers store their wheat instead of rushing it in on the cheap markets? Demand a fair price, cooperate and refuse to sell till you get the desired price. Good luck to all the Cadet boys and girls.—Elizabeth Neibrock, Martin City, Mo.

DEAR CADETS—I am a girl 16 years old. I once lived on a farm and liked farm life fine. I like to read UP-TO-DATE FARMING. I am 7th grade in the high school and I like to go to school. I live about ten blocks from the school. We own a farm of eighty acres about thirteen miles from Little Rock. I like to visit our country home in the summer. I would like to hear from the Cadet boys and girls—will answer

all letters and cards.—Edna Morehart, 412 Park avenue, Little Rock, Ark.

DEAR CADETS—I am a boy 20 years old and live on a farm of 100 acres. I have been a reader of UP-TO-DATE FARMING for some time and am glad to say I enjoy it very much. I think it a fine paper for those who farm or expect to farm. I would be glad to correspond with the Cadet boys and girls and will gladly answer all.—Louie Swann, Waltersaw, Ark.

DEAR CADETS—I am a constant reader of UP-TO-DATE FARMING and like it very much, especially the Cadet letters. I liked Mrs. T. M. Shamlin's letter just fine and dandy. I am 16 years old and live four and one-half miles northwest from Altus, on a 90-acre farm. We certainly have fine crops here this year, especially cotton. I would be very glad to exchange cards or letters with all the Cadets.—Tennie Harrison, Altus, Okla.

DEAR CADETS—I am a farmer boy of 18 and live on a farm of 200 acres. My brother takes UP-TO-DATE and I enjoy reading the Cadet letters. I go to school and will be in the 8th grade this term. We have a nice school and a good teacher. My brother owns half interest in a combined harvester. I would like to exchange cards with the Cadet boys and girls. Will try to answer all I receive.—John Sooter, Sublet, Idaho.

DEAR CADETS—I am a boy 15 years old and live in a small town in west Texas. My father has 320 acres of land and I like farm life fine. Our principal crop here is cotton. West Texas is the place where the owls hoot and the prairie dogs roam, but the crops grow well. I like all farm papers, but UP-TO-DATE is the one for me. This letter, I suppose, makes me a Cadet of Equity and I would like to exchange letters and cards with all the Cadets.—Schley Adams, Pylon, Tex.

DEAR CADETS: Having read your interesting letters for the past four years, I decided to become a Cadet of Equity. I live nineteen miles north of Houston, which is a thriving city of about one hundred thousand population. Galveston, fifty miles southeast of Houston, is an enjoyable summer resort, and thousands of excursionists go there every summer. The Galveston-Houston interurban cars give one hour and forty minutes service either way, and may be had every hour from 6 A. M. to 11 P. M. Westfield has one store, a sawmill, post-office, and a "hooze shop" (something it ought not to have), and several dwellings. Humble—"be it ever so humble," etc.—eight miles east, is an oil town of about one thousand people. Spring, four miles north, is a small railroad and sawmill town. Aldine, five miles south, is mostly noted for growing figs. Land sells for from \$15 to \$75 per acre, and prices are advancing. We have fine shell roads—about fifteen miles under construction now. Our crops are cotton, corn, sweet and Irish potatoes, and vegetables. I am a regular "Dixie Kid" of 22 years. Thanks for the good work of UP-TO-DATE and to Mr. Everitt.—John Wm. Hafer, Westfield, Texas.

DEAR CADETS: We subscribed for UP-TO-DATE FARMING only recently and I think it is fine, especially the Cadet page. I am 17 years old and live on a twelve-acre farm

in Niagara county. We raise a great many melons, apples, pears, plums, tomatoes, and almost every other kind of fruit. The farmers are beginning to harvest their apples now (September 19). There is a new concrete road from Lockport to Johnson Creek, which is now being completed. This goes by our place, and we think it is fine. I live nine miles from Lockport and five miles from Gasport, where our nearest trolley line is. I would be pleased to hear from all the Cadet boys and girls.—Inez M. Young, Gasport, N. Y.

DEAR CADETS: I am from the good old state of North Carolina, and live on a farm. The principal crops grown here are corn and cotton. I enjoy country life, especially during the summer, as we then go fishing. I live near Cape Fear river and not far from Singletary's lake. I am very fond of music and can play on the organ. I am 18, and my birthday is March 31. I would be glad to exchange letters and cards with all the boys and girls, and will exchange photos with the first that write. Much success to UP-TO-DATE.—Alice Edge, Cedar Creek, N. C.

DEAR CADETS: I, too, am a North Carolina girl, and would like to join the Cadets of Equity. I am 16 years old, and live on a farm, but I can't say I like country life. I attend school and would be glad to receive cards and letters from all the boys and girls. I will answer all I receive.—Alma Clyde Edge, Cedar Creek, N. C.

DEAR CADETS: I am a girl from Iowa, and live on a farm of 304 acres, seven miles from the nearest railroad. I am 16 years old, and love to read the Cadet page in UP-TO-DATE FARMING. I would like to receive letters and cards from all the Cadet boys and girls, and will certainly answer all.—Myrtle H. Hambleton, Guthrie Center, Iowa.

DEAR CADETS: Would a Georgia boy be welcome in your circle? I live 'way back in the Blue Ridge mountains in North Georgia, where the summer breezes ever blow. I have a farm of about 225 acres, and I sure do have a time. Our main crops are corn, potatoes, and cabbage; but we can raise 'most anything, such as cotton, onions, tomatoes, cane, wheat, and oats. I think Tompkins county, Ga., is the garden spot of the world. I wish you were all here to help me gather apples. I have a fine orchard of about 500 acres. I am 23, and will answer all letters or cards I receive.—William B. Walker, Dahlonega, Ga.

DEAR CADETS: I am a farmer girl 20 years of age, and would like to join you. Our farm is eight miles from the Ohio river, and I have been a reader of UP-TO-DATE for two years, and like the Cadet page fine. I keep house for papa and my two sisters and a brother younger than myself. We live on a farm of 128 acres and raise wheat, corn, and all kinds of vegetables. We have four horses, three cows, one calf and seven hogs. Mamma was taken from us five years ago this Christmas. Girls and boys, be good and kind to your mothers, for you don't know how you will miss them till after they are taken from you. I live about eighteen miles from Madison, which is on the Ohio river. Around this place is some of the most beautiful scenery in Indiana. I live a mile and a quarter from New Washington, a town of five or six hundred. It has three churches, a bank, a high school, four grocery stores, two doctors and an undertaker. I would like to exchange scene cards with the Cadet girls and boys.—Dovie Taflinger, Nabb, Ind.

DEAR CADETS: I am a Delaware girl, 15 years old, and would like to be a Cadet of Equity. I enjoy reading your letters very much. My home is on a farm in Sussex county. We raise lots of strawberries and various kinds of fruits and vegetables. The country here is very level, as we are in the Atlantic coast plain, in a country section known as Sycamore, which has one church, a school of eight grades, two stores, and three blacksmith shops. I would be glad to get cards and letters from the Cadets and will try to answer all I receive.—Carrie Brown, Laurel, Del.

DEAR CADETS: I am a Texas girl of 14 years. Can you imagine it possible that I can sit here this morning and see for miles around, farther than I have ever been from home? There are but few large towns around here, and they are from eighteen to thirty miles away. Sometimes we can see the farthest of them. I wish a lot of you Cadet boys and girls were here this morning to enjoy the cool, fresh breeze and the nice, warm sunshine. I want some one to talk to, as I can't be out any. I wish you could see our home; it isn't so fine, but it looks mighty pretty to me, as we lived in a dugout until about a week ago, when we moved into our new house. Girls, I wish you were here to go to school with me this winter, as I must go by myself. I go a mile to school, but I have a mighty pretty little pony to ride. My brother, Guy, is breaking her for me now. I would like to exchange cards and letters with all the Cadet boys and girls.—Bertha Robinson, Meadow, Texas.

To have the wonderful view referred to in the above letter would be a rich treat to a great many of the readers of this paper; but note what a glimpse we get of the whole country in the letters themselves. In this one issue of UP-TO-DATE FARMING we have letters from Texas, Ohio, Arkansas, Oklahoma, Idaho, Delaware, Georgia, Colorado, Florida, Wisconsin, Missouri, Indiana, Iowa, North Carolina, and New York. A paper must have a large circulation of interested and intelligent readers to beat that in a single issue.

ENGLISH ARMY HUNTING KNIFE

95c Prepaid
Made from knife bayonets from the English army; Sheffield steel—the finest in the world; razor edge, 8 in. blade. Fine as a hunting, butcher, pruning, kitchen or general purpose knife.

Price, With Scabbard, Prepaid, 95c.

\$4.95 Fine All Wool U.S. Army Blankets: Pure wool, 66x84 in., weighs 5 lbs., olive drab or bluish-gray, almost indestructible, worth \$10.00. Same blanket, except snowy white, same size, weight and quality, \$4.95. Mention color. Send your orders and ask for our "BOOK OF 1000 BARGAINS"—it is free. Address:

CAL HIRSCH & SONS U.S. Dept. 273 ST. LOUIS, MO.
Branches: Chicago, Boston, Los Angeles, Kansas City, El Paso

New American Thin Model Watch

Elegantly engraved, gold finished throughout, double hunting case, high grade ruby jeweled American lever movement, stem wind and stem set. Equipped with appearance to a 16 jewel Swiss watch. 20 YEAR GUARANTEE. Best watch each watch. Long gold finished chain for Ladies. 60 or vest chain for Gentlemen.

\$3.75

20 Year Guarantee

Let us send it to you C. O. D. BY INSURED PARCEL POST, pay your postmaster our Special Price **\$3.75** when you receive the watch. Satisfaction guaranteed or money refunded. Mention Ladies', Gent's or Boys' size. **HUNTER WATCH CO., DEPT. 1165 CHICAGO, ILL.**

\$25 Gold Watch \$3.00

Send No Money, not even a deposit. Just write if you prefer open face or hunting case, ladies' or gent's size, & we will send At Our Risk this Elegant 25 Year fully guaranteed, the most beautifully engraved Stem Wind & Set watch C. O. D. to your P. O. or for free examination at your expense. If you are satisfied with it and are sure it equals a \$25 Jewel \$25 Gold Watch pay us our special sale price of \$3.00. If you are not, return it to us. Chain for each watch. Long gold finished chain for Ladies. 60 or vest chain for Gentlemen.

FREE. Write now. LIGHT WATCH CO., DEPT. 346 CHICAGO.

Print Your Own

\$5. Prize Package 10c

This big Game and Fun Package will amuse the whole family all winter. 100 Great Games, Checkers, Chess, Dominoes, Fox and Geese, 9 Men Morris, Authors, Star Puzzle, Chinese Puzzle, 13 Puzzle, 25 Puzzle, Roman Cross Puzzle, 7 Word Cross of World, Marriage Looking Glass, Husband's and Wife's Commandments, 22 Popular Songs, 16 Comic Cards, 43 Magic Tricks, 70 Puzzles, 300 Jokes and Riddles, 12 Love Letters, 125 Ways to Tell, How to Tell Fortunes, How to Make Churns, Omeys, etc. All the above and 500 other things to amuse you. **25 CENTS**, postpaid. Address **STAR CO., 39 Clinton St., CHICAGO.**

Locket, Chain & Bracelet

Sell 6 boxes of Smith's Rosebud GIVEN. Solve at 25c each, the great puzzle of the world. 1000 Great Games, Checkers, Chess, Dominoes, Fox and Geese, 9 Men Morris, Authors, Star Puzzle, Chinese Puzzle, 13 Puzzle, 25 Puzzle, Roman Cross Puzzle, 7 Word Cross of World, Marriage Looking Glass, Husband's and Wife's Commandments, 22 Popular Songs, 16 Comic Cards, 43 Magic Tricks, 70 Puzzles, 300 Jokes and Riddles, 12 Love Letters, 125 Ways to Tell, How to Tell Fortunes, How to Make Churns, Omeys, etc. All the above and 500 other things to amuse you. **25 CENTS**, postpaid. Address **STAR CO., 39 Clinton St., CHICAGO.**

HUMANATONE

New patented musical instrument. Wonderful invention; nothing like it; astonishing; marvelous. You can be a real musician and play all the popular songs, ragtime, old time ballads, church hymns, dance music, etc. Also fine for piano accompaniment; sure to please. Made entirely of strong metal; will last a lifetime. Thousands sold. Sample by mail **25 CENTS** (value \$2.00) for 60 cents. Address **S. E. FERRY, Irvington, Ind.**

SIGNET BRACELET AND RING GIVEN

Both Given for selling 12 packages Blaine at 10c. each. **BLAINE MFG. CO., 213 Mill St., Concord Jct., Mass.**

THIS AIR RIFLE GIVEN

for selling 12 packages Blaine at 10c. each. Rifle first class in every way. When sold return our \$1.20 and we send rifle. **BLAINE MFG. CO., 213 Mill St., Concord Jct., Mass.**

Make Your Boy Happy!

By giving him THE BOYS' MAGAZINE. You could not give him a greater pleasure or a stronger influence for good. Each issue of this splendid magazine is filled with clean, fascinating stories and instructive articles, all of intense interest to every level of mind. Also, each issue contains a special treat devoted to Electricity, Mechanics, Athletics, Photography, Carpentry, Stamps and Coins. A new, handsome cover in colors each month. Beautifully illustrated throughout, both in black and white and in colors.

Special Offer! For only \$1.00 we will send you THE BOYS' MAGAZINE for a whole year and a copy of the most useful book you ever read, "Fifty Ways for Boys to Earn Money," and this Electric Engine. This engine is considerably larger than illustration. Runs at variable speeds, either forward or backward, between 200 and 3,000 revolutions a minute on one dry battery. Absolutely safe and easy to operate. This Electric Engine is interesting and instructive and any boy will go wild over it.

Order To-day! Your subscription will be entered at once and the Electric Engine and Book will be forwarded to you immediately, all transportation charges prepaid. We'll refund your money promptly if you are not more than pleased with THE BOYS' MAGAZINE, the Electric Engine and the Book. (We refer you to any bank, mercantile agency or publisher as to our responsibility.)

Address **THE SCOTT F. REDFIELD CO.**
802 MAIN STREET, SMETHPORT, PA.

(THE BOYS' MAGAZINE is on sale at all news-stands at 10c a copy.)

12-16-20 Gauge Hammerless "Pump" Guns

The Marlin hammerless repeating shotgun is a fine-appearing, beautifully-balanced gun, without any objectionable humps or bumps; no holes on top for gas to blow out through or water to get in; can't freeze up with rain, snow or sleet; its solid steel breech (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; it is the safest breech-loading shotgun ever built. Six shots in 12 and 16 gauges; five in 20 gauge.

It is Hammerless with Solid Steel Breech (inside as well as out)—Solid Top—Side Ejection—Matted Barrel (which costs \$4.00 extra on other guns)—Press Button Cartridge Release—(to remove loaded cartridges quickly from magazine without working through action) Double Extractors—Take-Down Feature—Trigger and Hammer Safety. Handles rapidly; guaranteed in shooting ability: price standard Grade "A" 12-gauge gun, \$22.60; 16- or 20-gauge, \$24.00.

Send 3 stamps postage for big catalog describing all Marlin repeating shotguns (hammer and hammerless), all Marlin repeating rifles, etc. Do it now!

The Marlin Firearms Co.,
104 Willow Street, New Haven, Conn.

FACTORY PRICES TO START YOU

Every "Ferry" blade is hand forged from razor steel. Every knife is thoroughly tested and warranted. Two good blades. Illustration shows "Ferry's Special" exact size. Best all round knife. Stag handle, strong, durable. We will send one of these 750 knives at special price 49c, postpaid \$1.00 for \$2.10.

S. E. FERRY, Irvington, Ind.

Farmers Organization and Co-operation

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.50; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.
W. H. Mitchell, Hutchinson, Kas., vice-president.
C. Hayes Taylor, Indianapolis, Ind., secretary and treasurer.
A. Y. Satterfield, Pocatello, Idaho, national organizer.
S. W. Morris, Rochester, Minn.
C. B. Lozier, Mobile, Ala.
J. Harris Lenker, Sunbury, Pa.
David Holmgren, Tremonton, Utah.
Wm. Grisenthwaite, Oregon City, Ore.
A. E. Weber, Geneva, Neb.
O. E. Scott, Pocatello, Idaho.

State Union Directory

Locals reporting dues and fees of new members in states having an organized

state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Box 539, Pocatello.

Secretary, O. E. Scott, Pocatello.

Oklahoma

President, T. C. Monson, Shawnee.

Secretary, J. A. Harmon, Shawnee.

Oregon

President, William Grisenthwaite, Oregon City.

Secretary, F. G. Buchanan, Oregon City.

Gulf Coast District

Florida, Georgia, Alabama, Mississippi and Louisiana—C. B. Lozier, district manager, 212-215 Masonic Temple, Mobile, Ala.

Nebraska

B. F. Walton, Geneva, to whom all prospective organizers should apply.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

"One step won't take you very far,
You've got to keep on walking;
One word won't tell folks what you are,
You've got to keep on talking;
One inch won't make you very tall,
You've got to keep on growing;
One local club won't do it all,
You've got to keep them coming."

This little verse expresses the vital thought in the great movement, that is now under way all over the country, to reform the marketing system for farm crops.

The present system is the result of many years' growth. No set or class of people can properly be charged with deliberately establishing it. Like the famous Topsy, it "jest grewed." But the people who are responsible for it are the farmers themselves.

We mean this: Farmers in all times past merely grew the farm crops and then looked for somebody at the nearest town to buy them. Naturally this condition attracted another class of people and the more stuff was produced the more people set themselves up as buyers, handlers and storers. This has gone on until the buyers, or middlemen as we call them, make a vast army, and the army is constantly becoming larger.

This middle class, by long experience, has developed many tricks in the trade. Also in late years the middle class became crowded and competition made their business uncertain. This suggested organization of the handlers and now we see that at a certain time of the year, after the crops are produced and they are ready to go to market, the various classes of the organized handlers meet in conventions.

Thus we hear of the grain dealers meeting. Also the associations of hay dealers, butter and egg handlers, apple dealers and storers and the commission merchants and brokers. All of these people get together in local meetings frequently, and meet at least once a year in state and national conventions. At such meetings they canvass the situation as regards supplies—the yields of the farms, orchards and gardens—and adopt rules to govern them in handling the supplies.

The aim of the organization is to

make the handling of the different classes of farm crops profitable to the members of the associations, no matter how many people set up in business. And as long as the business of handling is profitable the field attracts new people to it and thus divides the business amongst more people. Consequently the commission or margin for handling must be larger on the units. This must come off of the price paid to the producer or added to the price charged the next buyer, and must ultimately be paid by the consumer. The middleman is in an exceptionally favorable position, as he takes no risk in the production of the crop. The farmer takes all of this. The middlemen being organized and having arbitrarily set certain rules and grades that the stuff must come up to, they assume no risk, either, in handling it. There is no chance for the handler to lose on grades and, besides, if the price is low he is sure of his commission even if there is nothing left to go to first hands.

True, there is a class that buy outright and take all the chances. But even these people must make up their occasional losses when the market goes against them. They do this by buying at the lowest price they can squeeze. We have frequently found that the organization of a local clearing house of the Farmers Society of Equity immediately caused the local buyers to raise their prices several points.

So the problems are: (1) How can the producers have more to say about the prices their crops shall bring them and about the terms of sale? (2) How can the present unrestrained growth of the middle class be regulated and limited to the actual necessity of the case? And, (3) how can there be such a knowledge of the supply and the needs of the various markets that the maximum consumption will result and thus make unnecessary the enormous waste that occurs with some crops every year.

On another page in this issue is a letter from E. M. Spies, from which we reprint part here for the sake of emphasis:

Marketing the garden produce has be-

come a hard matter. The garden produce, however, in the Muskingum valley, is marketed by the truck growers' association, through their agent in Pittsburgh. This year, distribution was very, very unsatisfactory. The farmer whose tomatoes did not mature early lost the entire crop, because the association quit shipping on account of the slow demand and low prices. A last shipment of tomatoes netted one cent per basket. And the returns for cucumbers did not cover cost of hampers and labor. The early tomatoes paid, but the latter half went to waste on the vines. Owing to the summer drought the cabbage was a partial failure.

Again, it is the fluctuating prices which bankrupt. For that reason the grower deplores the first high prices early in the season, and the lamentable decline from dollars to cents when the banner packs reached the glutted market, and a cut price which made the grower swear and wipe the angry sweat from his brow. The big pickings, for which he received the least money, always cost more for labor, more team work, more baskets, more "eats" for the extra hands. Just as fast as the fruit ripens, and the hopes of the grower rise, and he hopes for a big return, the cut comes, hardly enough to pay for the baskets.

Therefore, the first returns are a snare! Every truck grower in a community is after the almighty first, big dollar; for that reason the plants are pushed into the fields early in order to mature the first TWO-DOLLAR pack—unfair and extortionate to the consumer.

And Mr. Spies' recommendation is as follows:

What the growers should demand is one sane maximum price for the fancy basket; one sane minimum price for seconds; one steady price for the season's output that will cover cost of production. The one price would give the grower a better chance for keeping on in the business. He could produce the truck self-sustained. It would not be necessary for him to borrow money to start each new year. In order to plant for another season money must be borrowed for seeds and fertilizers. Each year he is robbing Peter to pay Paul, in the uncertain race which does not pay. The children need clothes, and they must leave home to work in the city. Once the city gives them work and a steady wage, there isn't any promise big enough to lure them back again to work on the farm.

And hundreds of thousands of other producers have had the same experience this year, as Mr. Spies. And as many had a similar experience last year and the year before and the one before that and each year as long as we can remember. And unless producers now change their organizations and methods radically, like experiences will be met all down the years to come.

Mr. Spies is not an individual marketer. He says, "The garden produce in the Muskingum valley is marketed by the truck growers' association through its agent in Pittsburgh." We will assume that this association is an average of perhaps ten thousand farmers' associations in the country. It was powerless to protect its members in price, but the last shipment of tomatoes, before they quit marketing entirely, brought only one cent a basket and "cucumbers did not cover cost of handling and labor."

Mr. Spies is absolutely right when he says the growers should demand a steady price for the season's output. But what good will the demand do if the people making it are not in a position to enforce it? And how can the Muskingum Valley Truck Growers' Association enforce such a demand while there are a thousand other growing districts that are throwing their crops blindly on the same market without any demand for a definite price; or if a hundred other producing sections had agreed on a different schedule of prices, some of them lower, and were seeking the same market at the lower prices?

It is plain that under such conditions the Muskingum Valley growers could not expect any better conditions. But it is just as clear to the average man, that if the one hundred, or one thousand, other producing sections that supply the Pittsburgh market with tomatoes and cucumbers and cabbage and other stuff, would all get together in a meeting, like the handlers do, and if they would all adopt "one sane maximum price for the

fancy basket, one sane minimum price for the seconds, one steady price for the season's output," and all of them would put the marketing under the direction of one head, then the prices agreed upon would be the market prices.

To carry out this plan the marketing would have to be pro-rated—each producer supplying his portion and each producer keeping at home his portion of the surplus, if there would be a real surplus. And this can easily be done with centralized direction of marketing. Since enormous quantities of supply are lost, because of no market under the lack of system, the loss can not be greater when the marketing is systematized, but will be less. With the advance knowledge that the demand does not need the surplus, packages and transportation can be saved; besides, oftentimes, the surplus can be used or preserved at home; but even if lost at home the advantage will be enormously in favor of keeping it off of the market where it would destroy the price on what the legitimate demand needs.

So all of this proves that one local association will not do it all, but "you've got to keep them coming." And then the local clubs must be federated and keep on federating until there is a great American federation for all the producers and all the crops.

It matters not what the name of the association you belong to, or what one you connect with in the future, or what new one you organize. We believe in the ultimate federation of all of them to solve the marketing problem. Then the growers must demand "one sane maximum price for the fancy basket," or crate, or barrel, or bale; one sane minimum price for the seconds and one steady price for the season's output, AND THEN THEY WILL BE IN A POSITION TO ENFORCE THEIR DEMANDS.

We wish each reader of this paper would take this matter to heart and spread the idea all through his neighborhood. It might not be worth while to take it seriously if it were not for the fact that in the near future it will be easily possible to obtain all the benefits of such an ideal organization—a federation of all organizations. In this connection we will call the readers' attention to the convention of the Farmers Society of Equity, as announced in another column; also to the meeting of the recently organized federation, also published in this paper.

A good part of the producing population of the country should be at this very minute most vitally concerned about these forthcoming conventions. For instance, there were 3,179,000 farms in the country in 1909 that produced potatoes (U. S. census report of 1910). This is one-half of all the farms in the country. If we eliminate one-half of them as producing only for home consumption we still have one-fourth of the farms, or one fourth of the agricultural population of the country, that is now concerned about the price of the 1914 potato crop. The October government estimate of the crop placed it about midway between the crops of 1913 and 1912. The former sold at good prices and advanced until the end of the season. The latter, which was the largest crop the country ever produced, acted just the reverse—prices declined until toward the close of the season they would bring nothing. Since the October government report the weather has been very favorable for the crop and we expect the November report will indicate a crop approximately as great as in 1912.

There will be no more potatoes raised this year than the demand needs. But the trouble is likely to come through blind, unrestrained marketing, which will frequently glut the markets and destroy the prices to the producers, without the consumers get-

ting materially lower prices which, if they would, would stimulate consumption.

The conventions referred to certainly have a strong call to every grower of potatoes to sell. Prompt action at the conventions and a little personal work by the individual grower in his community before the conventions and after them, to organize the growers and federate them, will make tens of millions of dollars more out of the potato crop, while costing the farmer, who will do this work, no cash, but only a little time at a season when farm work is not pushing.

Prepare to go to the two conventions. Organize your community, if not organized now, and be ready to co-operate through the federation for the one object of getting a fair and profitable price for your potatoes. If in a local club, union, or clearing house now, pay your dues and thus be in line for the benefits of the comprehensive federation movement.

And the raisers of apples have an even more uncertain marketing problem confronting them than the potato growers have. There were 2,980,000 farms reporting trees of bearing age in 1909. (The number now is over 4,000,000.) Of course many of these farms do not grow apples commercially, but when we compare this with the whole number of farms—about 6,500,000—we begin to understand how many families are vitally concerned about the price and markets for apples, consequently should be much interested in the convention of the new federation.

Separate framers' associations that have for one of their objects the marketing of crops have failed in their purpose, as far as being able to compel satisfactory prices to be paid. They have not, and they can not always get, profitable prices when the crops are large. Under such a condition they can have very little influence on the prices. But when we bring many of the local associations together for unity in making prices and the distribution of the crops it will be entirely different, as we have tried to show.

Mr. Spies says this farther along in his article:

It is up to the association to make the prices that should meet the pressing needs of the grower, its member, and quit dictating, quit adding more expenses—more and more just to please the consumer's eye. A new rate rule should be instituted—commercial value upon a package according to value and quality that should give the grower a living wage in return for his money investments and labor in the management of his business. For farming and gardening is a legitimate business the same as any other, and should be managed on a firm financial principle, self-sustaining and profitable, as it ought to be. Unless some sane, even, steady price is maintained, the grower may be unable to keep up in the future year. There isn't any profit in working the garden on the strength of borrowed money, together with the uncertain returns which bankrupt the producer.

But let us say in conclusion, it will be foolish to decide what prices should be paid if the association has not the power to compel them to be paid. And right here let us say again, no local or section association can do that. It calls for a broad, comprehensive movement—a federation of the present organizations. Only in this way can question No. 1—How can the producers have more to say about the prices their crops shall bring them?—be answered.

Question 2, representing problem two should be solved by the handlers themselves. Through their own organizations they should limit and regulate the number of middlemen, thus keeping the expense in reasonable bounds. If they will not do this they may expect to see the direct-from-producer-to-consumer idea spread.

Question 3 is taken care of in the federation plan, where all reports of demand go to one central clearing house.

The spirit of getting together is abroad in the land with the farmers and they are learning the right way. The old thought, "united we stand, divided we fall," has impelled many communities of farmers to get together. But it must be taken today as it was when first uttered, before the Revolutionary war. Then the thirteen colonies were organized but they stood and worked separately. The call was then for all of them to get together, as divided they would fall. They did unite and the result is the United States of America, the greatest nation the world has ever known. And so the call goes out this year for the many farmers' organizations to unite and organize a great American farmers' federation which will be the greatest, most powerful and best organization the world may ever hope to see.

We want to see a federation for the one object of marketing, where each will recognize the interests of all and where all will stand for the welfare of each. Only in this way can farmers hope to gain their complete industrial freedom.

So farmers must understand and that it is absolutely necessary to unite in local bodies, but the local bodies of the Farmers Society of Equity, Grange, Farmers Union, etc., and the thousands of independent organizations, must unite to fully solve the problems which are the problems of all. As the separately organized colonies did, so must the various farmers' organizations do now. The separate organizations, although united, are bound to fail unless they adopt the broad course as the thirteen colonies did.

Don't Sell Your Broom Corn

STORE IT. Buyers of broom corn are working concertedly to get hold of as much of the crop as they possibly can at the lowest price they can squeeze. The crop is not large and the price will be higher. The Farmers Society of Equity has arrangements for storing broom corn by which about as much cash will be advanced on it as soon as loaded in car as the buyers will pay, and the grower can get all advantage of the advance of the market. Tell your neighbors, spread the news. Full instructions on request. See also Markets, page 19. This opportunity is open to all readers.

A MINNESOTA CO-OPERATIVE SUCCESS— Milaca, Minnesota, possesses an encouraging example of what farmers can do co-operatively. In May, 1911, the Milaca Live Stock and Produce Association was organized by a small group of farmers, as a beginning. Now they have a co-operative store, telephone lines, creamery, a breeding association, a potato warehouse, all owned and managed by farmers. The store carries a stock of goods invoicing \$14,000, and during 1913 made sales amounting to \$40,000. Receipts from live stock shipments were over \$30,000. Fifty-six carloads of potatoes were shipped last year. The creamery manufactured \$210,601.25 worth of butter, paying an average price of 31.5 cents per pound for butter fat. Farmers can succeed in business once they decide to do it.—*The Farmer.*

Didn't Want It Known

Sadie—Did Jack ever tell you he proposed to me before he married you?
Minnie—No, indeed. He did lots of things in those days that he is ashamed to tell.

A little "Wanted" or "For Sale" notice in The Market Place will connect you direct with the person who wants what you have or has what you want. This service is exclusive with this paper and hundreds of subscribers are finding it mighty profitable.

See Terms on Page 19

Sixth Annual Convention of the Farmers' Society of Equity Omaha, Nebraska, December 9, 10, 11, 1914

The 1914 Annual Convention of the Farmers Society of Equity will be held at Omaha, Nebraska, beginning December 9, 1914.

At the convention national officers of the Society will be elected and every other thing for the good of the organization and agriculture that comes before the convention will be considered and acted upon. Several matters of extraordinary importance, as affecting the Society and the future of agriculture in America, will come before the convention. This fact makes it important that there should be a complete representation of subordinate clearing houses.

For the guidance of members and clearing houses we quote from the National by-laws as follows:

Officers

Sec. 3. The officers of the National Clearing House shall be a president, a vice-president, a secretary, a treasurer, a national organizer, and seven directors.

Election of Officers

Sec. 5. The officers and directors of the Farmers Society of Equity, with the exception of the secretary, shall be elected by the members-at-large, the members of local clearing houses and associations federated for marketing. The members of such shall express their choices on ballots furnished by the National Clearing House, or printed in the official paper or on other paper. Each member shall be entitled to one vote for each office. Said ballots shall be sent to the National Clearing House by mail, or they may be brought to the annual meeting by the delegates representing such local clearing houses or associations and voted in the annual meeting. The greatest number of votes shall elect, provided it shall be found that the total number of votes cast shall equal fifty-one (51) per cent of the total membership in good standing. If such number of votes by ballot be less than fifty-one (51) per cent of the total number of members in good standing, then the election shall devolve upon the accredited delegates present at the annual meeting, who shall vote the number of votes to which they are entitled by representation and proxy.

Representation

Sec. 6. The annual meeting of the Farmers Society of Equity shall be composed of representatives of subordinate unions and clearing houses and federated associations as follows:

Each local clearing house and association federated for marketing is entitled to one representative; each county or district clearing house is entitled to one representative-at-large and one for each 1,000 members or fraction thereof in the county or district; each section clearing house is entitled to one representative-at-large and one for each 2,000 members or fraction thereof in the section. In the event that it is impractical for any local clearing house or federated association to send a representative, it may join another, or more than one, to send a representative. In such case the delegate shall have as many votes in the meeting as he carries credentials. Each state union is entitled to one representative-at-large and an additional one for each 5,000 members in the state.

NOMINATIONS

In accordance with the by-laws the following are the nominees for the various offices.

Vote for one candidate for each office of president, vice-president, treasurer and national organizer. Vote for seven directors only.

Each member is entitled to vote. The ballots will be counted when the national convention meets, December 9.

FOR PRESIDENT

C. B. Lozier, Mobile, Ala.
C. Hayes Taylor, Indianapolis, Ind.
W. H. Mitchell, Hutchinson, Kas.

FOR VICE-PRESIDENT

O. E. Scott, Pocatello, Idaho.
W. H. Mitchell, Hutchinson, Kas.
C. M. Parr, Hamilton, Mont.
S. W. Morris, Rochester, Minn.

FOR TREASURER

C. Hayes Taylor, Indianapolis, Ind.

A. Y. Satterfield, Pocatello, Idaho.

FOR NATIONAL ORGANIZER

A. Y. Satterfield, Pocatello, Idaho.

B. F. Walton, Geneva, Neb.

B. R. Inman, Indianapolis, Ind.

C. E. Squires, Taylor, N. D.

FOR DIRECTORS

J. A. Harmon, Shawnee, Okla.
Edw. VanAntwerp, Dent, Minn.
F. G. Buchanan, Oregon City, Ore.
B. F. Walton, Geneva, Neb.
David Holmgren, Tremonton, Utah.
D. McGuire, Hamilton, Mont.
W. H. Mitchell, Hutchinson, Kas.
A. E. Weber, Geneva, Neb.
R. M. Tyson, Tobias, Neb.
W. S. Kerstetter, Sunbury, Pa.
L. H. Brochman, Parkers Prairie, Minn.
O. E. Scott, Pocatello, Idaho.
A. Y. Satterfield, Pocatello, Idaho.
R. W. Storrs, DePue, Ill.
W. D. Graves, Missoula, Mont.
Wm. Grisenthwaite, Oregon City, Ore.
H. Harching, Hebron, Neb.
C. B. Lozier, Mobile, Ala.
T. C. Monson, Shawnee, Okla.
J. H. Lencker, Sunbury, Pa.
F. M. Lutz, Hebron, N. D.
C. M. Parr, Hamilton, Mont.
Colin MacDonald, Grand Bay, Ala.
John Peterson, Galesburg, Kas.

Note—At the 1913 convention it was ordered that the convention should meet this year at Pocatello, Idaho. But later, to have a more central meeting place, the far western directors waived their right and then the board selected Omaha as the meeting place. The Commercial Club of Omaha has extended us a cordial welcome and will furnish the meeting place free.

\$25.00 Cash for a Slogan

Here is a picture of the \$1250 Regal Underslung Automobile which we are going to give away, but first we want a slogan for this car. The Packard slogan is "Ask the man who owns one." The slogan for the Jackson is "No hill too steep, no sand too deep." You are familiar with other slogans and can no doubt think up a good one for this well known Model H, \$1250 Regal Automobile.

You Can Win the Auto and \$25.00 too

Think up the best slogan you can and send it in with your name and address, and we will tell you all about the contest in which this fine \$1250 Automobile is given. You stand a chance to win the \$25.00 cash prize too as this Regal Automobile before December 1, 1914. In so two or more persons send the slogan selected \$25 will be paid to each. Be sure and send your name and address so I can tell you about the contest. The \$1250 Regal is sent, all charges paid, to the winner. Write me today. A post card will do. Only one slogan accepted from each family.

C. F. BRANN, Auto Editor, 226 Center Street, Des Moines, Iowa

SUN HOLLOW WIRE SYSTEM

Floods of Radiance for Homes, Stores, Shops, Churches, Halls, Etc.

No matter where you live, or how little you wish to pay for lighting, "SUN" Lamps and "Sun" Hollow Wire System will give you brilliant illumination in every room, as convenient, as clean and as beautiful as gas or electricity, and far cheaper. Gasoline tank may be anywhere convenient; only a few spoonfuls of gasoline need be in house. Anyone can install it, services of mechanic unnecessary. **Gravity Lamps also.** One, two, three and four-burner fixtures; 108 styles. Send for catalog, special terms to agents, and full details of our

SPECIAL FREE PREMIUM OFFER
EASTMAN KODAK—No. 3 Premo Jr., photos 3 1/4 x 4 1/4, FREE to every purchaser of 6 lamps in one year.

SUN LIGHT CO., 1550 Market Street, Canton, O.

New KEROSENE LIGHT BEATS ELECTRIC OR GASOLINE

10 Days FREE—Send No Money

We don't ask you to pay us a cent until you have used this wonderful modern light in your own home ten days, then you may return it at our expense if not perfectly satisfied. You can't possibly lose a cent. We want to prove to you that it makes an ordinary oil lamp look like a candle; beats electric, gasoline or acetylene. Lights and is put out like old oil lamp. Tests at 14 leading Universities show that it

Burns 50 Hours on One Gallon common coal oil (kerosene), no odor, smoke or noise, simple, clean, won't explode. Three million people already enjoying this powerful, white, steady light, nearest to sunlight. Guaranteed.

\$1,000.00 Reward will be given to the person who shows us an oil lamp equal to the new Aladdin in every way (details of offer given in our circular). Would we dare make such a challenge if there were the slightest doubt as to the merits of the Aladdin? **GET ONE FREE.** We want one user in each locality to whom we can refer customers. To that person we have a special introductory offer to make, under which one lamp is given free. Write quick for our 10-Day Absolutely Free Trial Proposition and learn how to get one free.

WANT LAMP COMPANY, 637 Aladdin Building, Chicago, Ill.
Largest Manufacturers and Distributors of Kerosene Mantle Lamps in the World

We Want Men With Rigs or Autos to Deliver the ALADDIN on our easy plan. No previous experience necessary. Practically every farm home and small town home will buy after trying. One farmer who had never sold anything in his life before writes: "I sold 61 lamps the first seven days." Another says: "I disposed of 34 lamps out of 51 calls." Thousands who are coming money endorse the Aladdin just as strongly.

No Money Required We furnish capital to reliable men to get started. Ask for our distributor's plan and learn how to make big money in unoccupied territory.

AGENTS
Agents—I will sell you \$5 worth of goods for \$1. Terms free. Write plain. H. W. Buchanan, Box 126, Wadsworth, N. C.

FARM LANDS
We Call the attention of all farmers and others interested in real farming lands to our choice selection of 20,000 acres of fine smooth prairie lands, located in the southeastern part of the Gulf coast of Texas, at and near the towns of Hamshire and Winnie, Texas. The soil, covered with heavy blue stem and Bufo grass, is a dark brown loam, with a sufficient amount of sand mixed. Subsoil is clay. These lands are adapted to general farming and are great producers of excellent corn, cotton, ribbon cane, rice, all forage crops, like milo maize, kafir corn, sorghum, and numerous other feed crops, assuring successful stock raising and dairying. These lands, located in the most healthful climate, are now offered for sale at prices ranging from \$30 to \$60 per acre on very convenient terms. Here is the chance for farmers to obtain a better net result from their investment of money and time and work than on lands in the Middle West selling \$150 to \$300 per acre. This is a fact just considering the possibilities of general farming in this famous section, not counting the profits from truck farming and fruit raising, both of which are at home in the Hamshire-Winnie country. It is worth your while to look into this. If interested in this bona fide proposition, write at once for free booklet on Hamshire-Winnie to the owners, F. Koch & Co., 832 Transportation Bldg., Chicago, Ill.

Two Well improved farms for sale, in high state of cultivation; 576 acres and 391 acres, respectively; just south of Lamoni, Iowa, in Missouri. No trades. Am sole owner. Description and prices on application. Address C. A. Springer, Gilman City, Mo.

Free Government Land. Near 500,000 acres in Arkansas now open to homestead entry. Guide book with lists, laws, etc., 25c. Township map of state, 25c additional. L. E. Moore, Little Rock, Arkansas.

Farms wanted. We have direct buyers; don't pay commissions; write describing property, naming lowest price; we help buyers locate desirable property free. American Investment Association, 71 Palace Bldg., Minneapolis, Minn.

Agents wanted for first-class Arkansas land proposition; no rocks, hills nor swamps; big money for reliable men and women. Call or write Wm. C. Uphoff & Co., Times Bldg., St. Louis, Mo.

Little River Valley lands rich and cheap, on railroad. Robert Sessions, Winthrop, Ark.

FOR SALE—TOBACCO

Get a pound of satisfaction for 30¢; Kentucky real leaf tobacco; postage paid anywhere, or 7 pounds, \$2; 11 pounds, \$3; 20 pounds, \$5. Order today. Novice Harper, Box 468, Mayfield, Ky.

For Sale 40,000 pounds best leaf tobacco, from 2 to 6 years old. Mail stamps for sample to Anton Wavrin, Franklin, Ky. R. No. 5.

HELP WANTED

Wanted—Responsible party to take charge of business in each county. New Automatic Combination Tool, combined wire fence stretcher, post puller, lifting jack, etc. Lifts or pulls 3 tons, weighs 24 pounds. Sells to farmers, shops, teamsters, etc. Descriptive catalog and terms upon request. Harrah Manufacturing Co., Box M, Bloomfield, Ind.

We Will pay you \$120 to distribute religious literature in your community; sixty days' work; experience not required; man or woman; opportunity for promotion; spare time may be used. International Bible Press, 193 Winston Bldg., Philadelphia.

Will Pay Reliable man or woman \$12.50 to distribute 100 free packages Perfumed Borax Soap Powder among friends. No money required. R. Ward Company, 222 Institute Place, Chicago.

Thousands government positions open to men and women over 18; \$65 to \$150 month; farmers have excellent chance; write immediately for list of open positions. Franklin Institute, Dept. K26, Rochester, N. Y.

LIVE STOCK
I Have 100 head yearling steers for sale; also know of 8 or 10 loads heavy feeders. Hereford, Angus and Shorthorns. That I will help buy for 50¢ per head commission. Write me your wants if in need of cattle. Harry I. Bail, Fairfield, Iowa.

Steers, for sale, 60 head calves, weigh 515 lbs.; 45 head Angus, weigh about 675 lbs.; 60 Shorthorns, weigh around 900 lbs. All natives and good quality. W. W. Dyer, Ottumwa, Iowa.

Holstein calves. Ten heifers and two bulls, 15-16 pure, 4 to 6 weeks old, \$20 each, crated for shipment. One registered bull, a year old, \$100. Edgewood Farm, Whitewater, Wis.

Horse Owners—I guarantee results from my fattening recipe. No matter how old the horse. Results guaranteed. Mailed for 50¢. City Feed Co., Wilburton, Okla.

Thoroughbred Poland China pigs of the 1/2-ton kind. They are beautiful. Write, Alfred A. Nieweg, R. 2, Vichy, Mo.

PATENT ATTORNEYS
Men of ideas and inventive ability should write for new "Lists of Needed Inventions," "Patent Buyers" and "How to Get Your Patent and Your Money." Advice free. Randolph & Co., Patent Attorneys, Dept. 28, Washington, D. C.

Ideas wanted. Manufacturers are writing for patents procured through me. Three books with list 200 inventions wanted sent free. Advice free. I get patent or no fee. R. B. Owen, 49 Owen Bldg., Washington, D. C.

Patents that protect and pay. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

MOVING PICTURE PLAYS
Write Moving Picture plays; \$50 each; all or spare time; correspondence course not required; details free. Atlas Publishing Co., 386, Cincinnati, O.

MISCELLANEOUS

Free for six months; my special offer to introduce my magazine, "Investing for Profit." It is worth \$10 a copy to one who has been getting poorer while the rich, richer. It demonstrates the real earning power of money, and shows how any one, no matter how poor, can acquire riches. Investing for Profit is the only progressive financial journal published. It shows how \$100 grows to \$2,200. Write now and I'll send it six months free. H. L. Barber, 452, 20 W. Jackson Boulevard, Chicago.

MISSOURI MEETINGS

Organizer Almetus N. Barks requests us to publish that he will hold three meetings in the interest of organization in Fredericktown, Madison County, Missouri. The meetings will be held in the court house on the dates Nov. 7, Nov. 30 and Dec. 26. Each meeting will open at 12:30 p. m. of the date given.

AMERICAN FARMERS FEDERATION MEETING

The meeting to effect a permanent organization of the American Farmers Federation will convene in Omaha, Neb., on Dec. 10 and continue Dec. 11 and 12 next.

This meeting was authorized by the meeting that was held in Kansas City, Kas., last August. At the forthcoming meeting the tentative plan of organization and co-operation for marketing farm crops that the first meeting indorsed will be further considered and a plan that will meet the needs of the whole country it is hoped will be adopted. Also a constitution and by-laws must be adopted, officers selected for the year, the headquarters of the federation decided upon and everything else that demands the attention of the meeting attended to.

The unit of membership in the American Farmers Federation, recommended by the first meeting, is a local farmers' association, union, or club, and not the individual farmer. Any such organized body is entitled to a representative in the December convention. Also producers of any crops to sell, who are not now members of farmers' organizations, and who want better marketing conditions brought about, are to attend. Also the leaders in national farmers' organizations are urgently requested to attend and lend their assistance to establish the federation on a basis that will be acceptable to them and all farm organizations and all the farmers.

The place, Omaha, Neb.
The time, Dec. 10, 11 and 12, 1914.
The Omaha Commercial Club will answer questions about the local arrangements.

Make Up an Apple Club

The apple crop is very large and prices are the lowest they have been for years. Unless some extraordinary thing is done quickly, millions of bushels of choice fruit will sell too low, other millions of bushels will spoil in the orchards, millions of families will pay too high prices, and other millions will not get what they want. We believe the greatest increase in consumption can be brought about with the farmers, as the town and city people have ready access to the stores. So the proposition is for each country community to make up a car load order and buy direct. Get together. Appoint one man or woman your business manager. Report what you want to us and we'll print it free. A car load is 160 barrels, or 600 boxes, or 24,000 pounds in bulk. In Indiana 48 pounds make one bushel.

If you have apples to sell report to us also and we will print it free for the sake of marketing the 1914 apple crop at profitable prices and saving the would-be consumers from extortionate prices after only a part of the crop is stored by speculators.

This service is free to all readers.

Young Man, would you accept and wear a fine tailor-made suit just for showing it to your friends? Or a Slip-on Raincoat free? Could you use \$5 a day for a little spare time? Perhaps we can offer you a steady job. Write at once and get beautiful samples, styles and this wonderful offer. Banner Tailoring Co., Dept. 923, Chicago.

Wash Your Clothes without rubbing. No lyes or acids. Send 10 cents in stamps for enough to do four ordinary washings. Agents wanted. The Ideal Mfg. Co., Dept. 1, Ligonier, Ind.

Boys and Girls earn watches, adjustable bracelets and other prizes selling goods. Write us and we will tell you how. Crown Supply Co., Carthage, N. Y.

Envelopes, 100, your name and address printed on the corner, postpaid, thirty cents. Samples free. D. F. Brenneise, Wheeler, Ind.

Herb Doctor Recipe Book, 10 cents. Reveals rare old Indian herb secrets. Indiana Herb Gardens, Dept. 3, Hammond, Ind.

Seeds wanted. We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

2000 Ferrets for sale. Write for price list, it's free. Dekleins Bros., Jamestown, Mich., Box 80.

The Grower's Protest

(Continued From Page 5)
city gives them work and a steady wage, there isn't any promise big enough to lure them back again to work on the farm.

The producer isn't producing for pleasure. The only inducement that keeps the grower growing things is his love for delving in the soil. But of what use is any organization unless it is strong enough in numbers to set the price schedule? Of what use is it to impose the expense of packing fruits and vegetables in baskets, crates and hampers when the returns do not cover the cost of packages and transportation? And when the producer belongs to the association, is privileged to use the association's stamp, and grades his produce up to the association's standard pack, and pays his annual dues and extra assessments, the returns ought to pay the cost of producing. It's hard, mighty hard! Poor pay-day.

There isn't any manufacturer living who could afford to sell his products below cost of production. The farmer is the only producer who does, and the pricemakers—cold, cruel-hearted grafters—know it.

The growers' association here meets at Marietta, Ohio, in January. Bids from the commission agents at home and abroad are opened and the produce for the entire season is signed away to the agent for distribution, at his price. But, to be sure, no agreement has ever been drawn up in favor of a better price, as to what the grower should receive as his returns.

So the association has failed in its purpose, failed to protect the grower against the downfall prices which never have paid cost of the careful picking as it has come to be done today—grading and packing according to the association's standards. Then comes the hauling, transportation, icing car, inspection at car, field inspector, commission and a whole lot of other minor expenses which eat up all the profits, and which leave nothing to bank, above expenses after all the honest bills are paid.

OUR MARKET REVIEW

Reports of Crops, Markets, Trade, Etc., With Advice

KNOW THE PRICE AND ASK IT

We believe the prices attached to the crops named below are fair and equitable and farmers ought to receive them. They are based on the Chicago market, unless stated to the contrary. When the price is paid in the market is the time to sell, allowing freight and a reasonable off of the central home price. We believe these prices will be paid before the next crops are ready, purely on demand. How people will and see these for themselves, they will be quick to pay. But, regardless of the number reading the paper (the circulation is now over 200,000), those of our readers who demand these prices and hold for them, will be very sure to get them, because the world needs all of the crops, and can not get along with only part of them. Those who control may need to hold until the DUMPERS have unloaded, but their time is bound to come when their price will be paid. **HOLD FOR THESE PRICES: SELL AT THESE PRICES WHEN THEY WILL BE PAID AND QUIT SELLING THE HOUR THEY DROP BELOW, THEN THEY WILL GO RIGHT UP AGAIN.** Keep in mind that the more farmers who hold for and ask the prices the sooner they will come, because of reducing the supply in other hands.

A fair price, known by the producers, and that price demanded, will make marketing and prices of farm products as definite as any commodity produced in the country.

	Oct. 10, 1914	Change from two weeks before
WHEAT	63,835,000	X12,012,000
CORN	5,985,000	1,158,000
OATS	34,002,000	X 4,281,000
BARLEY	6,469,000	X 1,231,000

Comparatively few producers of crops can exercise enough control to compel the price.

The following prices are based on conditions as they exist now. Should conditions change materially in a short time, like the end of the European war, it will make revisions necessary. We predict the war will be a long one.

Prices are based on Chicago unless stated to the contrary.

WHEAT—No. 2 red.....	\$1.25
WHEAT—No. 2 hard.....	1.25
WHEAT—No. 1 northern at Minneapolis.....	1.25
CORN—No. 2 white (new crop after cribbed).....	.75
CORN—No. 2 white, from field.....	.55
OATS—No. 2 white.....	.55
BARLEY—Good malting.....	.75
BARLEY—Good feeding.....	.65
RYE—No. 2.....	1.00
BUCKWHEAT.....	1.00
CLOVER SEED—Choice red, bushel.....	8.50
TIMOTHY HAY—Choice, ton.....	20.00
BEANS—Choice hand-picked pea, bu.....	2.75
POTATOES—Choice round white.....	.75
BROOM CORN.....	.75

For current market prices see below.

GENERAL TRADE of the country is summarized by Bradstreet's, on October 17, as follows:

Quiet to dull. Current trade and industry show depression. Some easing of money and credit conditions. Good winter wheat outlook and war material demands helpful features. Warm weather, credit restriction and depressed cotton conditions checks to progress. Collections slow. Grain marketing lighter. Cotton stagnant. September foreign trade shows rally from August. Building trends irregular. Late crops, except cotton, selling well.

A distinctly better tone we notice in general business. Some men of large affairs, and whose business it is to sense coming changes, are predicting that business will soon rapidly expand. As is usual, this first evidence of a return to general prosperity comes from the agricultural sections. Prices for most farm products have been good, and farmers have been banking much money. This money is sent to the cities, much of it reaching New York, where it has been loaned usually at the highest legal rates of interest, plus 1 to 2 per cent commission. It is regrettable that the farmers of the north could not finance the southern farmers' cotton crop with the surplus money, which usually got them no interest, but brought the bankers from 7 to 10 per cent. When farmers are comprehensively organized or federated they can do such things and will not need to ask Congress or anybody on earth for money favors.

Weather has been unseasonably warm over nearly all of the country. At this writing, October 23, there has been no frost at Indianapolis, while the average time for killing frost is October 10. This mild weather has been beneficial for maturing corn, the pastures and fall wheat. The latter, however, has run a great risk of fly, evidences of which may or may not develop later. The area sown to winter wheat is considerably larger than last year.

The visible supply of wheat made a big increase since our former report, but prices advanced notwithstanding this. The cash price is about 8 cents a bushel higher which shows that the speculators are willing to take all that the farmers won't hold, and pay well for it. The pressure of marketing is now over in the winter and spring wheat sections, also in Canada, and we predict the price recommended by the Kansas City convention in August and carried by this paper, \$1.25 a bushel, basis Chicago, will soon be reached. The price is about 20 cents a bushel higher than a year before, as our report shows.

Corn and oats prices are also higher. The visible of the former declined slightly, while the latter made a liberal gain. Corn husking does not fully maintain the estimate of the corn yield as given out by the government in its October report, which is in accordance with our prediction.

Potato receipts have slowed down, but prices still are low. If this crop is to bring the growers the profit they

ought to have, there must be concert in marketing. This can come about by the growers having the same price and asking it. Of course, a comprehensive federation is what is needed, but we can hardly hope to get it to work for much of the 1914 crop. The weather has continued good for growth of late potatoes, and we look for several million bushels more to be added in the government's November estimate.

The various efforts to solve the cotton-marketing problem—whether wise or otherwise matters not now, since they have been fruitless. While distribution is practically at a standstill, and what little is being sold from the farms brings only 6 to 7 cents, Providence is generous in increasing the crop. Estimates are now being made of 16,000,000 bales, which, if realized, will be the greatest crop the country ever produced. There is still talk of a money pool to take over a considerable part of the crop and hold it off of the market. Also in some states the hope is held by some that the legislature will pass an anti-planting law. But the only real relief that has, so far, been given the situation is the buy-a-bale movement, and it is so limited that it hardly has any appreciable effect.

Advice

WHEAT—Hold until the price is \$1.25 at Chicago. CORN—Sell old corn. OATS—Hold them if you want more money than present prices. POTATOES—If you will get your neighbors to hold with you we advise against marketing now. But, regardless of this, it is a pretty good plan to not rush your potatoes off with the great flood of early marketing. COTTON—It's a matter of holding about one-half off of the market until better conditions come. See advice elsewhere in this paper.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on October 10, 1914, with comparisons, are shown in the following table: (The sign— before figures means decrease; X means increase.)

	Change same period last year	Change from a year before	Change from 2 years before
Bushels	Bushels	Bushels	Bushels
WHEAT	X5,471,000	X3,012,000	X23,237,000
CORN	—118,000	—3,614,000	X 1,221,000
OATS	—1,016,000	—4,361,000	X21,960,000
BARLEY	X2,063,000	X 488,000	X 2,441,000

The visible supply of wheat in Canada on the same date was 30,389,000 bushels. This is 6,693,000 bushels more than two weeks before and is 4,874,000 bushels more than a year before. The visible supply of corn was 4,376,000 bushels on the same date, which is 1,973,000 bushels more than two weeks before and is 4,083,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Oct. 17, two weeks before and a year before as follows:

	Oct. 17, 1914	Two weeks before	A year before
WHEAT, NO. 2 RED

Two weeks before, 66 1/4 and 69 1/4 respectively. Oats—December, 50 1/2; May, 63 1/2. Two weeks before, 47 1/2 and 50 1/2 respectively.

Chicago Produce Market

Chicago, October 21, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday	80	100	86
Tuesday	42	42	90
Wednesday	50	40	40

Total, 3 days..... 172 182 216
Fancy, sound, ripe potatoes again sold freely at steady prices, while ordinary, green and poor, rough stock was slow and easy. Receivers having fine stock, called the market active and firm. Those possessing common, green potatoes found the trade dull and unsatisfactory.

Sales reported were: Per bushel, bulk—Wisconsin poor, green, rough, white stock, 2 cars at 40c, 3 cars at 42c, 2 cars at 43c, 4 cars at 45c. Good, sound, 2 cars at 50c, 2 cars at 52c, 2 cars at 53c, 1 car Ohio's at 55c. Minnesota white, 2 cars at 50c, 1 car at 52c. Per bushel, Minnesota Early Ohio's, bulk or sacked

Minnesota white.....	50 @ 55c
Minnesota Early Ohio's.....	50 @ 55c
Dakota Ohio's.....	50 @ 55c
Michigan.....	50 @ 55c
Wisconsin.....	50 @ 55c
State, heated stock.....	40 @ 45c

The price of potatoes is from unchanged to 5c a bushel higher than two weeks before. A year before the price was from 10c to 12c a bushel higher than at this time.

SWEET POTATOES—Rule steady. The offerings are moderate. They are selling only fairly. The weather is too warm to be favorable.

Barrels, Virginia.....	\$2.35 @ 2.40
Jerseys.....	3.75 @ 3.85
Hampers, Jersey.....	1.15 @ 1.25
Maryland.....	90
Barrels of sweet potatoes are from 10c to 15c higher	

than two weeks before. Hampers are 15c to 25c higher than two weeks before. A year before Virginia barrels were selling for \$1.50 @ 1.75 and Jersey hampers at 80 @ 90c.

BEANS—So far as can be noticed the market is about steady. Consignments sparingly appearing and salable as below.

Pea Beans—Hand-picked, choice.....	\$2.40 @ 2.50
Common.....	2.20 @ 2.30
If poor, lower.....	

Red Kidneys.....	3.50
Brown Swedish, long.....	2.50 @ 3.00
Round.....	2.50 @ 3.00

The price of hand-picked choice pea beans is from 10c to 15c a bushel lower than two weeks before. Red Kidneys 25c a bushel lower and Brown Swedish unchanged. A year before choice hand-picked pea beans were quoted at \$2.15 @ 2.20.

HAY—Receipts, 1,213 tons. The better grades of both timothy and prairie hay in good demand and supply only fair. Medium and low grades quiet. Demand light and offerings liberal.

Choice Timothy Hay.....	\$16.00 @ 16.50
No. 1 Timothy.....	14.00 @ 15.00
No. 2 Timothy.....	12.50 @ 13.00
Kansas, Iowa and Nebraska Prairie.....	6.00 @ 14.00
Illinois and Wisconsin Prairie.....	7.00 @ 8.00

The price of timothy hay is 50c a ton lower than

two weeks before. Kansas, Iowa and Nebraska prairie hay is quoted \$1 to \$6 a ton lower than two weeks before. Illinois and Wisconsin prairie, \$1 to \$2 a ton lower. A year ago choice timothy hay was quoted \$18 @ 19. Iowa and Nebraska prairie, \$14.50 @ 15, and Illinois and Wisconsin prairie, \$8.50 @ 10.

STRAW—Rye straw quotable at \$3.50 @ 9. Oat straw at \$6 @ 6.50. Wheat straw \$6 @ 6.50. Oat straw is 50c a ton lower and wheat straw is unchanged to 50c a ton lower than two weeks before.

BROOM CORN—Only a quiet business doing. Little or no car lot demand.

Per ton, Illinois corn.....	\$80 @ 120
Western.....	60 @ 90
Damaged less.....	

The price of broom corn is unchanged from two weeks before. A year before Illinois corn was quoted \$150 @ 160 and Oklahoma \$110 @ 120.

Apples

APPLES—Choice to fine quality in barrels selling fairly well at quotations. Common stock slow. Traders are doing little in barrels. They are working more in bulk.

Bulk apples are selling fairly. There also are ample arrivals. Some call them steady and others easy. The market is well supplied with western boxes. They have a moderate trade.

To Bring Seller and Buyer Together

There is an enormous demand in every part of the country, amongst farmers and people in towns and cities who are readers of this paper, for farm products that are grown in other parts of the country. Therefore, as an additional help to members of the Farmers Society of Equity, we have established this service to **BRING PRODUCERS AND CONSUMERS TOGETHER**. Any member or clearing house of the society or any person who will become a member by now paying the entrance fee of \$2.50, may report his crops to sell or what he wants to buy, to the National Clearing House, F. S. E. and get this service FREE.

Rules

To save unnecessary correspondence, the quantity, variety, grade, condition as regards packing, ages or bulk, and price wanted should be given. If an article that may be marketed by want and may name the price they will pay. **TERMS**—They may be as agreed upon. Mail shipments should always be cash with order. Honest transactions are imposed on every person who uses this department, and dishonesty or trickery will be exposed when reported. Always mention "The Market Place, Up-to-Date Farming," when writing.

THE NATIONAL CLEARING HOUSE, FARMERS SOCIETY OF EQUITY, INDIANAPOLIS, INDIANA.

FOR SALE

POTATOES—Twenty-five cars of good stock. C. S. Marcy, Secretary, Hay Springs, Neb.

POTATOES—Two or three cars of white stock, in bulk. Fay G. Cotton, Secretary, Richville, Minn.

ADLER'S Famous No Money Down FREE Trial Offer

I Will Trust
YOU

Own Time To Pay

the
Quality
t In Money

My Original Direct-from-Factory-to-Home—Not One Cent In Advance
—Free 30 Days' Trial—Liberal Credit to All—Easy Payment Plan—
Revolutionizes Piano and Organ Selling—Absolutely Wipes Out Middle-
men—Banishes ALL Competition—Resulting in the Most Successful Nation-
Wide Sale Of Highest Grade Instruments Ever Known.

Read Every Word Of My Remarkable Money-Saving Plan

You've heard lots of Piano and Organ talk and have doubtless had all kinds of propositions put up to you—but here is the fairest, squarest, most liberal offer ever thought out by any organ maker. Read it! I am the man who made the "Adler" a household word; more than 90,000 of these famous instruments are now in the homes of the people—and when I say that you get the most in quality for the least in money when you buy a **World Famed Adler Organ**—Winner of the highest prize at the St. Louis World's Fair—also winner of Gold Medal at National Conservation Exposition, Knoxville, Tenn., 1913—it means a lot to you—your pocket book—in long years of continued service and the satisfaction of the sweetest music ever heard by human ears. It means Rock Bottom prices.

I Save You All "In-Between" Profits

I can and will save you \$13.75 because I sell direct from the \$1,000,000 Adler Organ Factory (greatest in existence) at lowest wholesale factory prices. The Adler Plan thoroughly wrecks organ prices, absolutely sponging out all "in-between," extra, middlemen's profits you pay on other organs.

FREE 30 Days' Trial

I will ship you any **World Famed Adler Organ** you may select from my new, big organ book, for an absolutely free playing test—yes, keep it a whole month free—if it does not prove all I claim—just ship it back to me—I will pay freight both ways and your trial doesn't cost you a single penny.

And Then A 365 Days' Approval Test

—and your money back if my **World Famed Adler Organ** has not held up to every claim I make for it. Isn't this the squarest offer you ever heard of?

Send No Money In Advance

To prove that this is an absolutely free trial, I don't ask you to pay a single penny in advance, because then I would seem to be binding you to some sort of an agreement. I don't want you to agree to anything or to pay anything, until you have had a chance to thoroughly satisfy yourself that my **World Famed Adler Organ** is all that I claim for it—I willingly take all the risk. My **World Famed Adler Organ** must sell itself after a free trial in your home. You're the judge, because it is your money and I can not afford to have a single dissatisfied customer.

Easy Payments—No Burden To You

No Interest to Pay—No Collectors to Bother You

My Adler System of credit makes it possible for anyone, no matter how limited their income, to own a **World Famed Adler Organ**. The payments are so small you will hardly miss them, and I charge no interest on deferred payments. After you have decided to keep my **World Famed Adler Organ** you can pay once a month—every three months or every six months. Ask about our easy Payment Plan for those who depend upon their crops for income.

The Adler 50 Year Guarantee

It is the biggest, best and strongest guarantee ever put on any musical instrument—and is beyond all doubt the crowning climax of the most liberal offer ever made by a responsible organ manufacturer.

Every **World Famed Adler Organ** sold is accompanied by our 50 year Legal Guarantee Bond. The Adler Guarantee is backed by the Adler Capital and Resources of over \$1,000,000.

Send Today For My Free Wonderful Organ Book And Money Saving Plan

It costs you nothing to find out how much better my **World Famed Prize Winning Adler Organs** are than the ordinary made-to-sell organs. Just fill in the coupon below and mail it me. No matter whether you are thinking of buying an instrument now or sometime in the future, you will want my big handsomely illustrated Organ Book and to know all about the fairest, squarest, most liberal, most convenient Organ buying proposition you ever heard of.

My Celebrated ADLER Piano Offer

The Greatest Ever Made By Any Piano Maker

My **Celebrated Adler Piano** is better than pianos that sell for double the money. I let you have your piano on exactly the same plan as the Adler Organ—30 days' free trial—all the time you want in which to pay—money back at the end of a year if the piano is not exactly as represented.

25-Year Guarantee

The longest guarantee given by any other maker of pianos is 12 years—less than half my guarantee. Nearly all the others guarantee for only 10 years. Remember my guarantee is for a quarter of a century. The heavily constructed back frame of my **Celebrated Adler Piano** is built to withstand a constant strain of 20 tons. I guarantee this! That's one reason why my piano—by actual test—stays in tune longer than pianos for which the dealers charge twice the price. I guarantee this also.

UP-TO-DATE FARMING

17th Year

November Fifteenth, 1914

Number 22

Does This Remind You?

Drawn by Frank Bowers

The Mission of this paper is to give farmers a balanced education--as much on marketing as on producing--and to help them to get more money for their crops

I wish to tell you that the piano we purchased from you about a year ago, we have used continually and it has given the best of satisfaction. The tuner who tuned the piano said it was a very fine piano and well made and the music teacher that gave our girls lessons, says we have a beauty of a piano. JOSIAH PERRIN, R. 5, Atlanta, Ia.

We are very much pleased with our piano, would not part with it at anywhere near the price. Think there will be two or more bought from you before long in this community as this one has proved so nice. You may use this letter in any way you want because the piano can't be beat in quality or price. WILL A. DAVIS, Sulphur Springs, Texas.

As far as our opinion is concerned, my wife and I both agree that it is the prettiest piano we have ever seen and it is as fine in tone and appearance as the \$500.00 pianos sold around here. The instructor was here again the other day and after playing on the instrument for a while she said, "I am getting more pleased with this piano all the time and I'm going to recommend it to my new students instead of the pianos they are buying here at \$350.00 and up." She told my wife not to let the piano go back because it was a big bargain. GEORGE A. HILL, Jr., Anna, Illinois.

Our piano arrived all O.K. a week ago. We have tried it out thoroughly and are well pleased with it and some of our friends have also played on it and say it couldn't be beaten at anywhere near that price. We thank you for your promptness in shipping and you may be sure we'll recommend the piano to our friends. F. KINLEY, Federal Dam, Minn.

As the free trial on my piano is nearly up, I feel it my duty to write you regarding the payments. You'll find enclosed draft for the full amount. I am simply delighted with the instrument and shall always be ready to speak a good word for you and your pianos. J. MORAVEK, Canton, Neb.

This new Thiery Piano style "E" is a full size instrument. It is just one of the new 1914 Thiery Pianos that are beautifully illustrated in colors in my new Style Book. It is so good that I'll ship it anywhere on thirty days trial and guarantee it against any defect in material or workmanship with my written unlimited guarantee.

1914 STYLE E—Puritan Design

The piano arrived Tuesday. It was brought to our home yesterday and it is simply beyond all our expectations. I can hardly explain our satisfaction. One of my neighbors was sorry when she saw the instrument when she figured how much they had paid for theirs. I won't even need the thirty days trial because I can see in a minute just how good the piano is. TESSIE OXLEY, R. 2, Arrowsmith, Illinois.

The longer we have the piano, the more pleased we are with it. One of our neighbors bought a piano at about the same time we got ours. They paid \$100.00 more for their piano, but I wouldn't think of trading with them and there are so many others who have made the same remark and add that our piano is so much nicer in tone and finish. CHARLES HERRMANN, Veblen, So. Dakota.

I find that the Thiery Piano is up to everything you claimed for it and am entirely satisfied with it. Everyone that sees and plays on it claims that it is better than the pianos sold here at \$75.00 to \$150.00 more money. Even some who have purchased these other pianos have visited at my home and admitted that altho my piano costs considerable less money, it is much better than theirs. CLYDE WILLIAMSON, Cannelville, Ohio.

We have the Thiery Piano at home now and there isn't a piano in our neighborhood that can come up to it in either tone, style or finish. The piano reached here without a scratch and we have already decided to keep it. I want to state again to you that we have the finest piano in this county. FRANK ROMBACH, Box 35, Rock Lake, N. Dakota.

when you buy a Thiery Piano

Will you accept a Thiery Piano in your home and play on it for 30 days *at my expense?* Just to prove that a Thiery Piano means more quality for less money—more for *your* money inside and out! I know of no better way to prove this to you than to invite you to accept my offer. The publishers of this paper know that I will do just as I say. And I'll pay all the freight going to you—and all the freight coming back to me, but there's small likelihood of you returning it. You'll probably decide to keep it before six days have passed—and then you can take two or three years time to complete payment if you do not wish to pay cash.

1914 Style Book Free

My new piano Style Book is the finest printed book of pianos that you have ever seen. It is printed in seven colors, showing all Thiery Pianos in Mahogany, Walnut and Oak cabinets. It is interesting from cover to cover and if you are at all interested in pianos, you'll be glad to receive this book. I'll send it free, postpaid, with trial order blanks, special prices, etc., immediately upon receipt of the coupon below.

Just Send Coupon Below

J. B. THIERY, Milwaukee, Wis.

Forward to me by return mail, postpaid, your new 1914 Style Book, with 30 day trial order blanks, special letter with prices direct to me, easy payment plans, etc. and without slightest obligation to send for either a piano or organ, just as you advertise in UP-TO-DATE FARMING.

NAME _____

ADDRESS _____

MY OFFER:—Any reliable reader of this paper desiring to try and test a Thiery Piano for a period of thirty days at my entire expense, can do so without any advance money and no obligation of any kind except to merely ship back the instrument at my expense if it isn't just as represented in every way. It is a real thirty days free trial. It gives you the opportunity of proving to your own satisfaction that dealing with me means a saving of from \$75.00 to \$150.00 and that a Thiery Piano is better in tone, easier in action and prettier in design than the vast majority of pianos sold now-days at an average of \$100.00 more money. This invitation is open to any reliable reader of this paper. Fill out and mail to me the coupon shown below.

Thiery Pianos are "Quality Pianos." They are made for homes that know it doesn't pay to buy cheap pianos. Thiery Pianos are so good that they are guaranteed against any defect in material or workmanship as long as the purchaser keeps them. **No instrument at any price can be guaranteed any stronger.** They are made in Genuine Mahogany—Genuine Walnut—and finest English Oak. The cabinets are double veneered both inside and out. They have Empire Grand Tops. Brass pedals and trimmings and the finest genuine ivory keys. They have overstrung strings in the bass and three strings to each note in the treble. They have full bronzed plates of the best plate metal. Sounding boards of the best mountain-grown spruce. Yet you can purchase a Thiery Piano for less than \$200.00 all freight paid and have from one to three years time to complete payment.

Hundreds of homes all over the United States are sending for Thiery Pianos just because they are exactly as advertised. No other piano ever sold direct to the purchaser has met with greater success. All middle profits are scratched out when you deal with me. I have no agents or representatives of any kind except my own customers.

I'll give you all the way from one to three years time to pay for a Thiery Piano if you do not wish to pay cash. I'll arrange payments to suit you in every way and if you don't want to pay monthly, you can pay quarterly, semi-annually or a dozen other different ways. You can pay a certain amount sixty or ninety days after you receive piano and the balance in two or three payments later on. In fact, I'll accept any payment plan that I can afford to accept and regardless of what payment plan you choose, the price will be just the same.

Don't close a deal anywhere for a piano of any kind until you get my Style Book and special prices. Just fill out the coupon below and mail it to me and I'll gladly send you my new Style Book with complete particulars of my proposition. You are under no obligation to accept any offer that I make to you. All I want is just the opportunity to prove to you that Thiery Pianos are just as advertised and that with one of them in your home, you will have the finest piano in your community at anywhere near my price.

Would You Like an Organ?

Thiery Organs are the real "Music-Makers" of all organs but they don't cost any more than the common organs, nor as much—that's why more Thiery Organs are being sold to particular homes all over the country than any other organ on the market. If you want an organ instead of a piano, I will gladly send you my color printed Organ Style Book, showing all Thiery Organs in colors with testimonial letters from buyers everywhere.

I'll ship the organ you choose on thirty days trial and you will be so pleased that you will decide to keep it before you have had it 10 days. Then you can pay for it in little by little payments if you don't want to pay cash. Altho Thiery Organs are known today as the finest instruments on the market, yet you can buy one for as little as \$2.50 a month or \$5.00 every two months until paid. The best Thiery Organ built can be purchased for \$4.00 a month. Of course every Thiery Organ is fully warranted—shipped direct to you—no agents' or middlemen's profits for you to pay—and if you're not glad you sent for it, you need not hesitate to return it at my expense. You can get a Thiery Organ now on "little by little" payments and a year or two after you have it paid for, I'll take the organ back as part payment on any Thiery Piano you wish. But just send for the organ book and price list with complete particulars and I'll gladly send it to you postpaid at once. Just fill out the coupon accordingly and everything will go to you immediately.

SPREADERS \$64.75 UP

RAISE BIGGER CROPS

My New No. 8 Low Down Manure Spreader

used now means bigger crops next year. You know this yourself. Manure spreading time is all the time. This new No. 8 Low Down Manure Spreader is Galloway's greatest spreader.

Positively the best spreader on earth. Double chain drive, endless apron; force feed; front wheels cut under load; close hitch; highest draft of any low-down machine. Capacity 60-70 bushels. All steel gear, complete with double-free and neck-yoke. Flexible rake; high speed beater pulverizes, flings any barnyard material. Steel wheels; gears coupled with channel steel, trussed like steel bridge. Box seats on rear truck, 45 inches high. Superior in every respect to now fangled freaks of heavy draft that eat you up for repairs, annoy you and kill your horses.

R. K. Foust, Ashley, Ohio, writes: "Please find draft for spreader received October 6th. Assure you I am more than pleased with same. It has proven all you claim and more. By buying of your company, I saved \$21.80 and got just what I was looking after."

My Book "A Streak of Gold" FREE
tells all about handling manure to get the greatest profit out of any spreader at any price, until you have dropped a postal asking for this great book worth \$1.00 (costs you nothing) and my BIG SPECIAL SPREADER CATALOG that tells the truth about the spreader business. Mailed free. Get RIGHT on this spreader proposition before you buy.

What We Want You to Know and Why**Being a Few Words on Particular Matters****Another European Pest Comes to America**

The gypsy moth, imported from Europe years ago, and by accident liberated, has caused irreparable damage to trees in the eastern states, and the fight to combat them has cost hundreds of thousands of dollars. Following this experience comes the European pine shoot moth, which, according to the Department of Agriculture, threatens us with serious loss. This insect is believed to have been introduced to America within the buds on imported pine seedlings which have come from France, England, Holland, Belgium and Germany. It has been discovered in ten localities (in six states) from Massachusetts to Pennsylvania, chiefly confined to nurseries. Experts believe that if it once obtains a foothold in our native pine forests it will be impossible to eradicate, and the damage it will do our future forests will be enormous. The moth, small and orange red in color, hollows out the buds and ends of twigs, causing deformity, crooked growth, and a waste when the tree is cut for lumber. The only way to destroy this insect and its larvae is to cut off the affected twig and burn it.

Facts for the "Back-to-the-Farmers"

The Department of Agriculture is said to constantly receive scores of letters from city folks who have come to the conclusion that the reason all farmers are not rich is because they lack intelligence and business ability. The Department does not encourage this view, which, as every farmer knows, is absurd. "Farmers as a class are intelligent, industrious, and many of them of excellent business judgment," declares the Department. "Those who have made a thorough study of the business side of farming know that it is not an easy matter to make money by farming. Only the most practical and experienced farmers are making much more than a living out of their farms. Most of the money that has been made out of farms in recent years was not made by farming, but by the rise in the price of farm lands." All of which is very true. But this condition need not and should not continue. Farming should be fairly profitable. The farmer should be able to pay himself good wages, pay himself legal interest on the money value of his farm and equipment, and make a fair profit on his business transactions, as any manufacturer must if he continues in business.

The Post Plan of Road Improvement

The late C. W. Post, of Battle Creek, Michigan, before he died began work on a plan to utilize the land along the roadways not used for actual traffic for the growing of fruit trees, not only to beautify the highways, but at the same time produce revenue toward the upkeep of the roads, and supply fruit to the fruitless at a reasonable price. Mr. Post believed the plan to be entirely practicable. It was his idea to have regularly employed crews in each township or district to keep the roads in repair, and that these crews could easily plant and care for the trees and take care of the fruit.

This novel idea may work out in a satisfactory manner. If it results in the removal of unsightly trees, brush, hedge rows and weeds, and induces a well-kept, slightly and sanitary roadway, it will be of that much benefit. We have serious doubts of the scheme producing revenue to reduce the road tax, however. The cost of planting and caring for the trees will be rather heavy, we imagine. Then the trees will be sprayed, of course. The fruit, grown on public lands by public employees, will be public property, and it may require a larger crew to keep the fruit on the trees until it can be gathered by the proper authorities than it will to keep the roads in condition. We understand Calhoun county, Michigan, in which Battle Creek is situated, will make the experiment. It will be interesting to watch the outcome.

More Light on the Methods of Marketing

Anoka, Minnesota, is situated on the Mississippi river twenty miles from Minneapolis. In September the farmers in the vicinity of Anoka were selling their potatoes to local dealers for 35 cents per bushel. At the same time the city housewife in Minneapolis was paying 70 to 75 cents for the same potatoes. Some one, it is said, made an investigation and the following disclosures: The Anoka dealer shipped the potatoes to Minneapolis and received 45 cents per bushel for them. The Minneapolis wholesaler who bought them paid the freight, amounting to 4½ cents per bushel, making the potatoes cost him about 50 cents laid down in Minneapolis. He then added 7 cents for his profit, selling to retailers at 57 cents per bushel. The retailer added 13 cents per bushel and thus the consumer paid 70 cents for what the grower sold for 35 cents. The retailers say they can not handle potatoes for less than a gross margin of 12 or 13 cents per bushel. This barely gives back the cost of handling, shrinkage, losses by waste, and by bad credit accounts. A gross profit of from 3 to 3½ cents per peck does not seem unreasonable. The wholesaler declares he can not handle potatoes on a less margin than 7 cents per bushel and make any money. He pleads wastes, costs of handling and storage, etc., in support of his statement. The local buyer, who says he so often hits a low market and losses, must have a margin of from 10 to 12 cents per bushel or be forced out of business by his occasional losses.

Under the present system of marketing, nothing better than this need be expected. The system could not survive on any less. This in itself is sufficient to condemn the system, from both the producers' and the consumers' standpoint. The farmer does not receive enough, and the consumer pays too much in proportion to what the farmer receives. The producers must organize, establish receiving depots in the markets, handle their potatoes with such care there will be little waste, and deal direct with the retailers of the cities. This will eliminate the local buyer and the wholesaler and save a possible 17 cents per bushel. Then if consumers desire to take part in the matter of saving, let them form co-operative purchasing clubs and buy direct from the producers' receiving depots. This is the only practical solution of the problem.

When Writing to Advertisers Please Mention
Up-to-Date Farming**A Merry Christmas for That Boy of Yours!**

Your boy's Christmas will be the happiest ever, if you will send him **THE BOYS' MAGAZINE**. It is a gift that lasts a whole year. **THE BOYS' MAGAZINE** is chock-full of just the kind of reading you want your boy to have. Clean, inspiring stories by the very best boys' writers. Practical and instructive departments devoted to Electricity, Mechanics,

Athletics, Photography, Carpentry and Stamps and Coins. **THE BOYS' MAGAZINE** is beautifully illustrated throughout in both black and white and in colors. Each issue has a new handsome cover in colors.

WALTER CAMP is a contributing editor. Mr. Camp is known everywhere as America's highest authority on Athletics. Every boy should read Mr. Camp's ideas of true, manly sportsmanship.

SPECIAL OFFER: For only \$1.00 we will send you **THE BOYS' MAGAZINE** for a whole year and a copy of the most useful and practical book you ever read, "Fifty Ways for Boys to Earn Money," and this splendid Electric Engine. This engine is a perfect piece of workmanship. It is considerably larger than illustration. Runs at variable speeds, either forward or backward, from 150 to 3,100 revolutions a minute on one dry battery. Both speed and reverse are governed by the controlling lever. Safe; easy to operate. A marvel of mechanical and scientific ingenuity. Send your subscription to-day, and the electric engine and book will be forwarded at once, all transportation charges prepaid. Satisfaction, or money refunded. **The Scott F. Redfield Co., 903 Main St., Smethport, Pa.**

\$975 Empire Touring Car Given Away!

You Can Own This Beautiful Car Without One Cent of Cost

If you want to own an automobile here is your opportunity to get one without one cent of cost. You may have felt heretofore that you could not afford to own a car. You do not have to afford to own this automobile, for we have a plan whereby you can earn it. The car that we have chosen to give away is an Empire. It is the latest 1915 model, 40 horsepower, and comes fully equipped, even to electric self-starting and lighting system. A full year's guarantee is given by the manufacturers on each car, and this guarantee covers the electric equipment. The usual guarantee on automobiles is for only 90 days. When the manufacturer is willing to back up a car in such a substantial manner it is most conclusive proof that the quality is in the car. You could not own a more complete and up to date automobile than the one we are offering. We will send it free, all freight prepaid, to our most industrious reader.

You May Easily Become the Owner of This Automobile

It's Your Greatest
Opportunity!

Twenty-Three Others
Have Won
Our Automobiles

Yes, it is easily possible to become the owner of this beautiful automobile. It is the greatest opportunity every offered you. All you have to do to earn it is to take subscriptions to our popular farm paper—Missouri Valley Farmer. The subscription price is only 25 cents a year, 50 cents for three years, or \$1.00 for six years. Yearly subscriptions count 500 points, 3 year subscriptions 2,000 points, and six-year subscriptions 4,000 points. The automobile will be awarded to the person having the most points on January 30, 1915, which is the close of this offer.

In addition to the automobile there are 29 other prizes, costing over \$800.00. We will gladly send you full information about these prizes. As a special inducement for you to send in your name and start working for the prizes, at once we will allow you double the points mentioned on the above scale until January 2nd, 1915. This will give you a good start toward the automobile. In case of a tie, a prize exactly like the one in question will be awarded to each tying contestant.

During the past few years we have given away 23 automobiles to our readers for taking subscriptions to our publications. None of these winners were any more capable than you are yourself. We will gladly furnish you with their names and addresses so that you can write them about their experiences in our past contests. They will be glad to tell you about the easy way in which they won an automobile.

A Big Surprise Awaits You—Mail the Coupon

Every person who sends in the coupon in answer to this announcement will receive not only full particulars about our great automobile offer, but will also be entitled to our big surprise. It is a real surprise, too. We have a number of good things in store for those who accept this offer. It is going to be the biggest and most liberal contest we have ever conducted on Missouri Valley Farmer. You should take advantage of this opportunity at once if you want to get the most out of it. Just think of the number of autos we have given to others. Don't you think it is worth a trial? The accompanying coupon will bring you full information by return mail. Your name and address, properly filled in, is all that is necessary. You are under no obligations whatever, and will not have to spend one cent to win this automobile. Do it now and get an early start.

The Missouri Valley Farmer, 855 Jackson St., Topeka, Kansas

Missouri Valley Farmer, 855 Jackson St., Topeka, Kan.

Gentlemen:—Please send me your big surprise and tell me how to get the automobile. This coupon does not obligate me in any way.

Free Trip to the Panama-Pacific Exposition

Do you want to obtain a free trip to the Panama Exposition? Of course you do. Everybody does. The Panama Canal is the world's greatest achievement. There is nothing to compare with it, and a grand World's Fair to celebrate the realization of this dream of four centuries is eminently appropriate.

A Party of One Hundred or More Will Be Sent Free on This Magnificent Trip

Will you be one of the party to enjoy the greatest sightseeing trip in the world without one cent of cost to you? In no sense is this great exposition simply a local California affair. Millions are planning to make this trip. Those who fail to visit California in 1915 will miss an opportunity of a lifetime. It is different from any other world's fair. It will surpass all others in every conceivable way.

Birdseye View of the Exposition

FEATURES OF THE GREAT FAIR

Thirty-one countries will have great exhibits. Over forty states, besides Hawaii and Porto Rico, have pavilions along the water front on the avenue of states.

The "Zone," devoted to amusements and fun, covers sixty-two acres. It will eclipse the "Pike" of St. Louis and the "Midway" of Chicago. The greatest military bands of the world will be there. A miniature "Panama Canal," correct in every detail, showing how the great canal carries the ships from ocean to ocean, will be presented. Sixteen million incandescent lamps will be used to illuminate "Yellowstone Park," reproduced in miniature. Also there will be the "Cascade of the Nymphs of Fairyland," with 30,000 gallons of water tumbling every minute. Hundreds of educational features, exhibits, art, beautiful structures, etc., will give every one a most wonderful sight.

CUT THIS OUT

UP-TO-DATE FARMING, Indianapolis, Ind.:

Gentlemen—I have read your announcement concerning the free trip to the Exposition and would be pleased to have full particulars.

Name

Address

We mean exactly what we say when we state that you will go on this magnificent trip free of charge. It will not cost you one cent. But we are going to send only a limited number. This is not a voting contest or a chance scheme. It is truly the most wonderful offer ever made before. Make up your mind that you are going to "Frisco" next year and write us at once. Address all communications to

INDIANAPOLIS, INDIANA, NOVEMBER 15, 1914

No. 22

Balanced Rations

Song of the Corn

Heap high the farmer's wintry board!
Heap high the golden corn!
No richer gift has autumn poured
From out her lavish horn.

Through weeds and grass and opening flowers
Our plows their furrows made,
While everywhere the sun and showers
Of March and April played.

We dropped the seed o'er hill and plain,
Beneath the sun of May,
And frightened from our sprouting grain
The robber crows away.

All through the long bright days of June
Its leaves grew green and fair,
And waved in hot midsummer's noon
Its soft and curling hair.

And now with autumn's moonlit eyes
Its harvest time has come;
We pluck away the ripened ears
And bear the treasure home.

—Whittier.

A seed corn campaign should be instituted in every community.

In farming there is a time for everything, and everything should be done in its time.

The information and money which we dig out for ourselves is of the greatest value to us.

Produce well, and sell well, and then you are in position to buy well and abundantly.

A farmer who would be an up-to-date farmer naturally should read UP-TO-DATE FARMING.

When farmers learn what co-operation really means the farming class will be the governing class.

The Texas and Oklahoma farmers have adopted as a slogan, "Make a living first, then plant cotton."

The old Farmers Alliance still lives lustily in North Carolina. The Farmers Union is also strong in the Tarheel State.

Let us hope that when the war dogs of Europe are again chained their tails shall be cut—just behind the ears. Muzzling is useless.

Hostetter's Almanac, Dr. Pierce's Account Book and Pilgrim's Progress don't constitute a very good farm library. Get a few standard books on agriculture.

The old-time "hay ride" is being crowded off the roads by the automobile excursions, but we will wager that for genuine fun the hay ride deserves first place.

The Department of Agriculture insists that farmers should realize the necessity of physiological and pathological studies of plants. A dictionary would be the first requisite to most of us in such cases.

There is a man in Alabama who has never seen wheat growing in the fields, and he isn't blind either. Don't pity him—he has a chance. Pity the fellows in Europe who will never see wheat growing again.

With all these "buy-a-bale, buy-a-bull, buy-a-barrel" movements, the average farmer doesn't lose sight of the fact that what he most needs is a selling movement. When he sells what he has at a fair price he can and will buy what he needs at a fair price.

Getting to Market

This Is When the Apple Crop Goes Lame

Not Production Only

SECRETARY HOUSTON of the Department of Agriculture, in an address recently before the National Dairy Show Association at Chicago, admitted that "up to the last two or three years, unquestionably attention was directed too exclusively merely to the production side of rural life." The slogan has been, he continued, "make two blades of grass grow where only one grew before," and individualism characterized thinking and acting. Obviously, he said, there is more to rural life than the mere increase of crops and animals.

We are proud of these admissions in high official circles, for we never heard such things said previous to our persistent and self-sacrificing fight along these lines in UP-TO-DATE FARMING. It is a guarantee that these evils so persistently and so stubbornly ignored by the public will be remedied. Vital as are the problems of production, says Mr. Houston, even more urgent are the problems of marketing and distribution. He told the dairy men that Congress has appropriated \$200,000 for the study of marketing. The object of all this, said the secretary, is to do justice as between producer and consumer; to guarantee that the producer shall get a just price for the specific product which he offers for sale, and to the consumer that he shall get the specific product for which he pays his price.

But, after all, the remedy is in organization—farm organization. Secretary Houston says extreme individualism in agriculture has had its day. There can be no question, he affirms, "that the key to the solution of many of the problems of rural life will be found in some form of concerted action or of co-operation. Some form of organization is as inevitable as it is desirable. Without it the farm can not have adequate schools or social life; without it he can not secure good roads, standardize his products or economically market them."

That is strong language for the head of the Department of Agriculture, and it is encouraging. But the government undertakes so many things that it poorly accomplishes. An official timidity seems to stand in the way of results. This brings the actual work back to the farmers themselves. Unorganized, they are helpless even with this powerful official support. The greatest wrongs are local in their nature and their effects. Even a marketing bureau at Washington can not take cognizance of them. But the local organization can see them, and backed by a nation-wide organization power it can remedy them. Thus do we look to the local, and to the combination of locals—to the universal federation. How can the farmers hesitate in the face of these high official declarations?

What Others Say and What We Think of It

"The farm boy of today will be the farmer of tomorrow."—The Carolina Farmer. Not if he can get a job in town.

"The American saloon has had its day."—Southern Farm Journal. And the night is theirs until the dawn of a new day.

"As we predicted, Congress has adjourned and done nothing."—The Southern Cultivator. Now if you want to start an argument, make that statement to Big Business or the labor unions.

"There are some 96,000,000 progressive people in the United States—and Uncle Joe Cannon."—Farm, Stock and Home. Yet Uncle Joe, in spite of his 78 years, recently made more progress than some of the most rabid progressives.

"Any southern farmer who would plant a normal crop of cotton in 1915 is an enemy to the public good, as well as to his own welfare."—The Southern Cultivator. "Ephraim is joined to his idols. Let him alone."—Hosea 4, 17.

"The government must help in crop marketing as well as crop making."—Progressive Farmer. But the government will not unless the farmers compel it, and the farmers can do what the government would do more easily than they can make the government do it. To do the thing right, brother farmers, do it yourselves.

"The deplorable financial conditions which the railways are facing, and the legislative barriers thrown in their way constantly, have forced the wisest heads to seek in vain for a solution to the troubles."—Railway Journal. But haven't we been given to distinctly understand, by those same wise heads, that an increase in rates is the only solution?

"As a class we farmers are systematically robbed at both ends of the line—buying and selling."—Southern Farm Journal. Oh, we wouldn't call it robbed. It is our own choosing. If we met a man with a string of fine fish, and bought them at a good price within 200 yards of the river where they were caught, we wouldn't call the fisherman a robber. We'd call ourself a fool. We could had we been so minded, have secured fishing tackle and gone fishing for ourselves. When farmers organize and do their own business the "robbing" will cease.

"The one great problem in this country is the development and utilization of our resources. The European war will teach our people the value of our wonderful home resources and how to utilize these resources at home and to manufacture the surplus into finished products which can be sold in the markets of the world."—The Farmer. What is true of the nation should be true of the community. Every farming neighborhood should study its own resources for neighborhood welfare, and then work all together for their development and utilization.

EDITORIAL

Thanksgiving in America

IN THIS YEAR of 1914 the people of the United States have much to be thankful for. The official departments of the nation report in the main the largest crop yields of any previous year. This is a little hard for a great portion of our farm population to understand, for over a large area of our farming country an unprecedented drought prevailed during the growing season. The drought was accompanied by unusual heat, and many crops were greatly reduced in yield and some of them almost destroyed. But still there is no great cause for alarm. The unlimited resources of the country and the wonderful variety of its productions will insure such an abundance that no one need suffer or be seriously limited in their supplies. The fall season has been remarkably favorable even in the heat and drought-stricken regions, and the pastures have been extra good, and have held out until late. There is truly much to be thankful for.

There has also been a general depression in business. Those who buy to sell again and whose business is to invest money in enterprises whose success is a hope of the future, though they sometimes take apparently unwarranted risks, are, from the very nature of their business, inclined to be timid. They look with distrust and suspicion upon any change that may affect the business in which they are engaged. Laws have been enacted during the year that have had this effect, but even the financial skies are now clearing, bank balances are attaining the usual total, and business confidence is being restored. Yes, we have much to be thankful for.

And we are at peace. Mexico on our southern border is still in a turbulent condition. Today we may see there signs of peace; tomorrow we may hear the distressing sounds of conflict. A prudent President has maintained our national honor and caused our government to be respected everywhere, but his policy has kept us out of war. Less considerate action might have had our soldiers falling in lines of battle in that unfortunate republic. We truly have much to be thankful for.

But look across the seas. The greatest nations of earth, the homes of civilization and progress, the regions where the wisest go to learn more, where science has made its greatest attainments, and where the religion of Jesus Christ is understood to prevail—these countries are engaged in the deadliest war human beings ever fought, a deadlier war than history knows. Less than a year ago we could not have believed such a thing possible.

We believed education, religion and civilization had taken the human family entirely above such national conflicts. But they are there. Death is everywhere. Cities that have stood for a thousand years are destroyed in a day, and countries that have yielded an annual support for much of the world are laid waste and left as shattered monuments of human destructiveness! Every knee that bends in prayer next Thanksgiving Day will thank God that the United States is at peace.

But that is not all. While we deplore the destruction of life and property across the seas, we know that the hand of production is palsied there, and yet supplies must be had from some source. The broad door of America is open, and it is about the only one that is. Depression even here followed the beginning of the terrible war over there, but that depression can not continue. The warring nations must have the products of the soil, of the mines and of the mills, and there will be a way made to get them there. We need not be afraid though our acres produce twice as much as they have done before, nor if the cattle on our thousand hills and the live stock in our rich pastures doubles. So be it. In some way money will find its way here to pay for them. The nations that have ceased to produce must have them, and friendly hands will reach across the seas to get them. Be thankful that our energies are devoted to production rather than to the destruction of our fellow-men.

And education is abroad in our land. Our farmers are learning as they never did before. They begin to realize that they are a part of the business world; that they have a right to control their trade as others have to control theirs. They are learning how to "produce two blades of grass where one grew before," and they are learning that even the extra blade belongs to those who produced it—that they may sell it or keep it, as to them seems best. In other words, that they have a right to figure up its cost and to add to that cost a reasonable profit, as other producers of salable commodities do. They are learning, too, that scattered over the vast area of this great nation they must unite and co-operate if they maintain their just rights and get what truly is theirs. All this not to harm any person on earth, not to deny the needy the means of supply, but merely to shake off the hands of speculation and greed that have so long had them and their customers by the throat.

Well may songs of praise and prayers of thanksgiving come from grateful American hearts.

Strange Fascination for Quantity

EVERYBODY seems to have a strange fascination for quantity. This specially manifests itself in those who would teach farmers how to manage and work to improve their condition and that of the country. They can see nothing but quantity. No matter what is produced, their teaching is that success lies in producing more and more of it. Recently picking up one of our Indiana farm paper exchanges, the first thing we noticed was this full page display head: "To permanently increase profits from Indiana farms, cover the state with good live stock." What does it mean to cover a state with stock? Of course the expression is not to be taken literally, but it was intended to specially emphasize the importance of an unlimited increase of live stock and the good results that would come from it. No doubt that our production of live stock could be profitably increased, but when we work to that increase we must take into consideration the de-

mand and price. This seems to be entirely lost sight of by the teachers of "success" in farming. When the farmer produces more of anything than he needs for his own use, the surplus is to be sold, and if there is profit in it to him depends entirely upon the price he receives for it, and the price depends upon the needs of those who must buy.

Suppose live stock production in Indiana should be increased as indicated in the above quoted headline, what effect would it have on the price—on the profit to the growers? If the state were covered with good live stock, other conditions remaining the same, would that increased number of stock be worth any more than the average supply that is now produced? Statistics, official figures, show many cases where great crops, overabundant production, did not bring as much to the producers as the smaller preceding crops. And this is just as true of live stock as it is of soil-grown crops. Only very recently a headline in a market

report was: "General cattle supply burdensome and market is slow and lower." Not that there is any less demand, but that the "supply is burdensome." In the same paper we find this significant declaration: "Lard and fully cured meats scarce and firm, but green meats lower and very dull." The stored meats held by the packers were kept off the market except at the fixed price, but the live stock and meats nearest the farmers were "slow and lower and very dull." A still later paper says: "Several adverse conditions worked to the detriment of the market, but chief among them was the burdensome volume of the supply."

If Indiana, or any other state, or all the states, were covered with good live stock, the tremendous surplus would have to be sold. What then of the "burdensome volume of the sup-

ply"? We do not know why teachers do not think of this feature of big crops and overproduction. To consider the profits to the producers on a single article in a moderate supply and then estimate the same profits on a multitude of articles in an excessive supply is sheer folly. As the supply increases the price falls until in many such cases there have been no profits at all. There are no doubt many things, live stock among the rest, of which a reasonable increase would bring increased profits to the producers, but the idea that an unlimited increase would bring unlimited profits is unworthy the teachers in any line of business; especially so with the present control of market prices. Only a certain quantity will be bought anyhow, and only a certain portion of needs will be supplied. What goes beyond that there is no demand for and it goes to waste.

Why Not All Crops?

THE Fruit Grower and Farmer, a leading journal published in the great Central West, arguing the necessity for organization to properly handle the fruit crop, says: "The fruit grower working alone, independent of his neighbor grower, is not in a position to get the best price for his fruit or to lessen the cost of producing it in either large or small quantities."

That is very true, and it points strongly to the necessity of organization and co-operation, both in marketing and production. Individualism in the fields and orchards can not be otherwise than a struggle when there is unity of action in almost all other lines. The gains to the fruit grower by co-operation are proven in many cases in various portions of the country. We may call attention to the Wathena Fruit Growers' Association of Kansas. Eight years ago the fruit growers of that section were receiving from 50 cents to 90 cents a crate for their berries. This year the lowest was \$1.50 a crate, as we learn from a report in the New York World. The association now does a business of more than \$500,000 a year, and owns property worth \$20,000. Had it not been for organization and combined action those fruit growers would today be working as individuals, producing what they could under numerous disadvantages and selling their fruit at whatever the buyer might decide to offer them for it.

But why is this not true of all other crops? Note the condition of the cotton growers when the European war ruined the buyers' market. The cotton growers were in such straits that various liberal schemes were devised to relieve them, until finally, with the indorsement of the United States government, it is proposed to create a

special market for \$150,000,000 worth of cotton.

Wheat affords another good example this year. In the great winter wheat regions as the grain started from the threshing machine to the speculators' market, from 60 to 70 cents was all that was offered. We urged the growers not to sell for less than a dollar, and, as we did once before, inaugurated a campaign for "dollar wheat." There was a powerful organization behind us, and soon prices began to climb. Other conditions not seen in the beginning helped, and in some places the price has gone as high as \$1.50 a bushel. What now of the individual wheat grower who rushed his grain off to the 70-cent market?

But that is the way of the unorganized farmers. No matter what crop is grown, it is at the mercy of those who buy to sell again, and such buyers naturally force the price as low as possible, while they make their selling prices as high as possible, and the unorganized producers and consumers can not help themselves. There certainly needs no further proofs of these disastrous facts.

In organizing, then, why not include all the crops and the whole country? The same machinery will accomplish every purpose, and easily make farming as independent in business as it is now said to be in its personal living from the soil. If there is a prejudice in favor of or against certain forms of organization that prejudice is entirely overcome by the recently-adopted plan of federation, open on equal terms to all, and that is pledged to both a national and local system of marketing—of price control, unlimited distribution, and complete and equitable supply of demands. It is not of fruit, wheat, and cotton only, but of all crops that are grown for market.

A Warning to Poultry Raisers

THE Department of Agriculture warns poultry raisers that there is danger the poultry trade may be monopolized, shut out from trade competition, as is the cattle and beef trade in the hands of the packers. In this event, says the Department, just as the farmer with a few beef cattle to dispose of has to seek a market (be controlled by a market) several hundred miles away or deal through the local commission man or agent, who will buy live cattle, so will chicken raisers have to dispose of their product for live shipment to Chicago or other centers, unless local poultry dressing and refrigerating establishments are maintained.

The Department, therefore, encourages dressed-poultry men not to centralize their killing establishments, but

to have smaller ones near the poultry raising districts, so that the live chickens need not be shipped so far and for that reason may be received in better condition.

While it is apparent that the main purpose of the Department in this warning is to secure a better quality of meat for the consumer, it is of no little concern to the poultry raiser also. The monopolization of the market centralizes the control of the price and makes the poultry raiser as helpless as the grower of live stock now it. We may be sure that such a condition is coming, and poultry raising will then not be half so profitable as it is now. The only remedy we can see is for the poultry raisers to join with other producers in controlling the marketing of their products.

November Fifteenth Feature Article

From the Tree to the Table

A Study in the Methods of Marketing the Apple

profitable. No matter how little care or how large a yield, inferior apples will not sell at a profitable price. The first concern of the man who would grow apples to sell at a profit is to select desirable varieties and give them the care essential to the production of fine quality. Care must also be taken to produce quality economically. This in itself is a factor deserving the closest study. A man can, if he likes, put a piano polish on a bean pole, and it would make a very fine bean pole, yet it would add nothing to the quantity or quality of the beans grown thereon. But with apples it is different. Uniformity, color and flavor are greatly to be desired along with quantity. One can, by going to sufficient expense in time and money, produce superior apples, but to make them the most profitable the expense must be held at a minimum for practical results.

When the crop is matured on the tree the farmer's individual influence upon the factors governing the profit to be obtained is reduced almost to the vanishing point. The problem, therefore, is to put the fruit in proper condition to bring the best price and to find the market where a profitable price will be paid. This problem is a very broad one, and as important as it is broad. It has been neglected to

their own goods must inform themselves on this point. In communities where the packing is done by an organization, each member should take a personal interest in having the work done in such high-grade manner that an enviable reputation will be obtained for the goods packed by them. If the writer owned an orchard in a community where the picking, packing and selling was being done by an association, he would not only insist upon a careful, discriminating pack, but would have his own personal label and guarantee placed on every box or barrel of his own fruit, so that any dissatisfaction might be traced back through the association to him, and he would get credit for all points of superiority. The most successful shipping association will be that one whose members are not only willing, but will insist on standing back of their own products with their personal guarantee. It will not take the trade nor the consuming public long to recognize and reward such care and integrity as this.

The fruit must be handled from orchard to ultimate consumer in the manner which will most effectively prevent deterioration.

Inferior grades should be eliminated from the green fruit markets and disposed of in other ways. There is, of

THE SAME TO THE BOTTOM

THE APPLE, notwithstanding its disgraceful participation in relieving our first parents of their privileges in the Garden of Eden, has held first place in the esteem of humankind as the fruit par excellence, from that day until this. Its popularity is justly earned. The apple is the king of fruits, and its uses are so many and well known that to enumerate them would not be worth while. Everybody eats apples, in many shapes and manners, or would if they could have them.

The apple industry in the United States is an immense one. We could relate how many acres, and trees, and barrels, and train loads, and men, and dollars are employed in the production and marketing of the annual crop, but of what would be the benefit? No one could realize the magnitude by looking upon figures in cold type, astounding as they would be. And to the layman the figures would be important only in their significance. With apples in superabundance the universal appetite for the delectable fruit should be satisfied. Yet it is not, and "There's a reason."

To the apple grower, whether he owns a large commercial orchard and markets his crop by the train load, or is a farmer with but a few trees which provide him with enough for home use and a small surplus to sell, there are two principal objects to engage his attention, i. e., securing a crop and securing a profit. In producing the crop about everything rests with the farmer as an individual. In securing a profit, the individual learns that conditions over which, as an individual, he has little or no influence, rule with an iron hand. The downfall of Father Adam and Mother Eve was the first disaster in the apple business where the grower lost out, but it has not been the last, as many of their descendants can testify, to their sorrow.

Several things well worth mentioning here have a great deal to do with selling apples at a profit. The fruit must be desirable. Poor fruit is never

FARM STORAGE PLANTS IN NEW ENGLAND

PICKING—WHERE MARKETING ACTUALLY BEGINS

the hurt of both producer and consumer.

In some localities, where commercial orchards are extensive, methods have been introduced which in a measure offer assistance to the growers in this particular matter. Organized effort has been made to find the best market, and to put the fruit on that market with the minimum of expense, and in the form of package popular with the trade in the markets patronized. Economy and efficiency demand that the work of picking, packing, storing, shipping and selling should be handled by experts. The field was an excellent one for co-operative effort, which has been utilized to a degree, but not to the extent which the industry will eventually attain. Like all other economic reforms, of broad and lasting effect, time is required to work out the thousand and one matters of detail. The growers must perforce be put through the school of business experience, where the length of the term depends upon the interest taken and the progress made.

After picking the fruit must be put up in that form which will command the respect of the market for which it is intended. Here is where expert service is required. Farmers who pack

course, a demand for cheaper fruit, for special purposes and among that class of consumers who can hardly afford to pay the price to be asked for choice and fancy grades. This special market should be carefully studied, and reached in a way that will not operate in any way to the disadvantage of the market for the better grades, a task which can be accomplished only by handling the fruit through a thoroughly efficient selling agency, and the willing co-operation of the growers themselves.

The cold storage of apples has worked wonders in the industry. The growers, while profiting in a general way by the advantages in storage, have not profited as much as they might, by any means. Nor can they fully realize the benefit cold storage can normally large production, until be to them, especially in years of abnormally large production, until through a compact co-operative organization they place themselves in position to control the storage of their fruit and sell from the storage plant as well as from the orchard or packing plant.

Only the choice and fancy grades of standard varieties should go into cold storage.

HEADING IN

Marketing should include supplying country towns and rural districts with the fruit they could gladly make use of, could they obtain it at a price within their means. This is a market of immense magnitude awaiting development, and when properly developed will be of untold benefit to the entire apple industry, by preventing the congestion of the large markets, a condition which is of injury to the grower and but little, if any, benefit to the city consumer. A system should be devised for the distribution of fruit in rural sections, and this should be done through a thoroughly organized marketing system to embrace all farmers and all crops. This is the only system which can handle the marketing of the entire production of the apple or any other crop with the greatest degree of success.

To consider this problem of the disposition of low-grade apples, a by-products congress has been proposed, delegates to be composed of one representative from each growers' association, one from each cannery, evaporating and drying plant, cider and vinegar mills, one from each railroad and one from each commercial club interested. Out of this meeting is expected to develop a big co-operative organization designed to systematically handle the low-grade fruit in the most profitable manner. The general plan is to first promote and develop the canning, evaporating and other methods of treating the fruit to the point where the bulk of the crop of low grades will be cared for, and second to open up and supply markets to absorb these products.

Out of the country-wide agitation which is enveloping the apple growers of America will come an enlightenment which, in fewer years than we may imagine, will perfect a system of apple distribution from the tree to the table to gladden the hearts and brighten the lives of the thousands who raise and the millions who eat, as Adam did, the apple.

SORTING, GRADING AND BOXING IN OREGON

THE FARM *and* ITS PROBLEMS

of Producing and Marketing

Preparing for Winter

THERE are a great many little jobs that require our attention before winter sets in, some of which are absolutely essential, but more of them in the nature of aids to spring work or comforts to stock or family, and it is these last that are apt to be neglected. First of all it is necessary to look to the comfort of the stock. While the family is considered first, of course, yet they can make their wants known and household conveniences can generally be attended to during colder weather; but our dumb animals are not so fortunate and must stand all discomforts and exposures they may be subjected to through neglect or carelessness. Because of a broken pane of glass an animal may be subjected to a bad draft during the entire winter, a tumble-down wall which will allow the cold air and snow to blow into or beneath the stables, cracks in the siding or a door that does not shut as it ought to. All these things demand our attention and we must look after them, for, besides the comfort of the animals, they mean dollars and cents to us. It is well to provide straw in plentiful supply where it will be dry and easy of access and not be used too sparingly as bedding. Good sound wheat or oat straw makes the best bedding material for the stables I have ever used. The chickens require dry, warm, clean quarters and need to be gotten used to going there before real winter sets in, so they will not remain in the small coops or use the farm tools and buggies for roosts. Good ventilation of the stables is a very important matter. Look at it from this standpoint: We can live thirty days or more without food; we can live seven days without water; but we can not live ten minutes without air. Moreover, we can as readily poison ourselves with foul air as with foul food or water. By getting these things into our heads we will do something at once to supply our stables with pure air. I use the King system of ventilation and it is the only one I have ever seen that will properly ventilate a stable. It costs but little. By this system of ventilation the fresh, pure air from the outside is taken in and the cold foul air removed. For its successful working it requires first a stable or room that is comparatively air-proof. There must be no direct openings to the outside or through the ceiling to the space above, such as hay chutes or other openings for putting down hay and bedding unless provided with doors or covers so they may be closed. The fresh air is admitted through several small air ducts well distributed on all sides of the building opening to the interior at or near the ceiling and on the outside three or more feet lower down. If the openings are directly through the wall at the ceiling the warm air will escape, and if lower down the fresh air will come in and be drawn out by the large ventilating shaft and the air above will not be changed. Of course the farm machinery must be well housed for the winter. I have a good shed in which all my implements are kept when not in use. The machines are thoroughly cleaned of dirt and all wearing parts well oiled before being put away. When necessary they are painted. Money spent for good paint is well invested. About the dwelling are many little things that are needed to be done before real cold weather comes. Banking about buildings may be needed, slippery places made safe, a drain fixed, screens removed. The yards will present innumerable little jobs, as the cleaning up of leaves and rubbish, protecting vines and shrubbery, repairing the yard fence, filling low places with gravel, and arranging

things for convenience and comfort about the house. It pays to make things handy for the winter's work about the house, and there are many little things that can be done which will lighten the labors of the housewife. The young orchard should be protected from rodents before cold weather arrives, which can be done by placing screen wire veneer or tarred paper around the trunks. This is indeed a good precaution for all young fruit trees. It is well to haul out all the manure which may have accumulated, not forgetting the hog yards and hen house and yards and including the ashes. Fence posts may be set and new fences built or old ones repaired. If the fence is not ready the posts may be set and will be solid in the ground when the fence is put on. We must not neglect to provide ourselves with a plentiful supply of reading matter for the long winter evenings; a daily and a weekly newspaper or two, some good magazines, poultry and farm papers (among these being UP-TO-DATE FARMING, which is worth many times its subscription price to any farmer in the land.)—John Underwood, R. R. 2, Tunnel Hill, Ill.

The Production of Clean, Safe Milk

PERSONS engaged in the production of milk and consumers interested in procuring clean, safe milk, will be interested in the factors for producing the same. The essential factors are outlined as follows:

Clean, healthy cows, kept in clean, light, well-ventilated stables; stable so constructed as to be easily cleaned; a clean, well-drained barnyard; clean utensils, thoroughly sterilized; clean, healthy milkers that milk with dry hands; a small-top milking pail; immediate cooling of the milk to 50 degrees F. or lower; storage of milk at a low temperature until delivered; a separate house for handling the milk; an abundant supply of pure water.

A new bulletin of eighteen pages, containing a number of figures and describing in detail the practical methods that should be followed in the production of clean milk, has been issued by the Department of Agriculture. A summary of the bulletin follows:

Bacteria find their way into the milk from various sources. So many come from the udder itself, where they grow in the milk cisterns and ducts. The greater number, however, come from the dust of the air, the dirt from the udder and flanks, from the milker, and from unclean utensils. Disease-producing bacteria may get into the milk from cows having such diseases as tuberculosis, or from people who handle the milk, who may themselves have contagious diseases, or who have been taking care of patients afflicted with such diseases as typhoid fever, diphtheria and septic sore throat.

The consumer is sometimes responsible for the contamination of the milk. Milk bottles should not be taken into a sick room, because infectious diseases can spread by carrying infected bottles back to the dairy farm. If bottles are left where there are contagious diseases, they should not be collected by the milk man until they have been properly disinfected by the board of health. In the case of typhoid fever or some serious diseases which may be carried in the milk, it is better for the customer to put out a covered dish for the milk or have it delivered to some member of the household. Until official permission has been granted no milk bottles should be removed from a home in which there is or has recently been a case of communicable disease. The consumer should not use milk bottles for holding vinegar, kerosene, or liquids other than milk.

The consumer is interested in clean milk primarily because no one cares to use a food which is not produced and handled under sanitary conditions. Serious epidemics of typhoid fever, septic sore throat and other diseases have been disseminated through the milk supply. The weight of scientific evidence at the present time leads to the conclusion that tuberculosis may be transmitted from animals to human beings, particularly children, who consume raw milk containing tubercle bacilli.

Cleanliness is not an absolute safeguard against disease, but it is the greatest factor in preventing contamination. From the health standpoint there is great danger not only from the specific disease-producing bacteria previously mentioned, but from milk that contains large numbers of miscellaneous bacteria which may cause serious digestive troubles, especially in infants and invalids whose diet consists chiefly of milk. There is also the minor consideration of the loss to the consumer from milk souring or otherwise spoiling before it can be used. The cleaner the milk, the longer it will keep good and sweet.

Most producers of market milk have experienced the chagrin of having a shipment of milk refused or returned because it reached the market sour, tainted, or otherwise in poor condition. Delivering sour or tainted milk usually results in losing the confidence of the dealer; or if it is delivered direct to the consumer, it means the loss of good customers. A reputation for clean milk means fewer complaints, a better class of patrons, and a steady market for the product of the dairy.

Healthy cows to breed from and pure milk to feed upon are two important factors in rearing thrifty calves and in the development and maintenance of a healthy and profitable herd. Aside from these immediate and definite benefits there is another consideration, not immediately measurable, but of vast influence, namely, the moral influence, for no one can learn to produce good and clean milk without learning good methods of care and management of the herd, and the study of these things leads to greater care and intelligence in the economic features of the business.

Farmers are Tobacco-Wise

They know real quality in tobacco leaf when they chew it. That's why they always use PIPER HEIDSIECK chewing tobacco. The plug is convenient, handy, easy to carry—and this wonderfully mellow, rich White Burley leaf with the famous "champagne flavor" gives them a reliable *taste and satisfaction* they can get no other way.

PIPER Heidsieck

CHEWING TOBACCO (CHAMPAGNE FLAVOR)

is the favorite of thousands upon thousands of farmers, judges, lawyers, doctors—men prominent in all walks of life. Its use gives a man tobacco enjoyment in its supreme form. Begin using "PIPER" *this week*; you'll be a "PIPER" user always.

Buy "PIPER" by the Box and you'll always have a supply handy. For your convenience we pack "PIPER" in 2-lb. boxes of 36 separate foil-wrapped 5c Pocket Plugs; also in 2-lb. boxes of 18 ten-cent cuts.

FREE

Send 10c and your tobacco dealer's name, and we'll mail you prepaid, anywhere in U. S., a full-size 10c cut of "PIPER" in a handsome leather pouch FREE. The tobacco, pouch and mailing expenses cost us 20c, and we gladly spend the money to get you to try "PIPER."

Sold by dealers everywhere, in all size cuts from 5c up.

Producing and Marketing

Advice to Stockmen

By E. J. Gibbons

THE FARMER must learn how to handle his cattle, just as everything else on the farm. Instead of buying thin cattle in the spring of the year as a great many have been doing, it would be better to buy thin cattle in the fall of the year, say in October or November, when one can buy them at the lower prices. Then have enough roughage to rough this thin stuff through until the spring and then pasture and fatten out for the next spring and ship it to market.

A great many farmers have been buying their thin cattle in the spring

and paying outrageously high prices, putting them on grass and marketing them off the grass in the fall, and have not been able to get their money back. By handling them the former way, the farmer is assured a good profit. Holstein or Jersey steers sell for \$1 to \$2 a hundredweight less than steers composed of Herefords, shorthorns, Angus or any other breed.

We advise the farmer to buy cattle weighing 500 to 600 pounds, and then he ought to make them weigh 1,200 pounds when he markets them in a year and a half. These 500-to 600-pound cattle are generally called long yearlings and should be of good beef type.

The packers always pay better for fat cattle in the spring, between February and June, as at this time they have their grass cattle out of the coolers and are hungry for fat stuff, so they pay better prices.

We believe that every farmer of the Northwest should arrange to raise enough corn to feed at least a carload of cattle and a load of hogs every year.

Minneapolis and St. Paul constitute a pioneer market in the dairy business, and farmers can do nothing better than raise this type of cattle, as they are bringing from \$60 to \$75 a head at the present time. Many stockmen buy them at the yards at \$45 to \$50 a head, being then five to six months of calving, such cows when fresh bring \$10 to \$15 profit, and a little roughage feeds them through.

Every farmer purchasing cattle on a market to take back home should consult a good commission man who can pick out the kinds that will make the farmer money, and also give the farmer his up-to-the-minute knowledge of the true value of such cattle, thereby saving the farmer from paying over market values for the stock.

We advise marketing hogs at 250 pounds weight, as hogs of this weight are considered matured. It does not pay to feed them to make them weigh 300 to 400 pounds and run a chance of losing them from either cholera or other diseases. Any hogs weighing 250 pounds are considered matured on the market during the present time.

The big breaks in the hog market generally come in June and October, so we would advise farmers not to market their hogs in those months if possible.

Caring for Breeding Ewes

(By Archie E. Vandervort, Sidney Centre, N. Y.)

IN CARING for breeding ewes during the winter months, first of all, I aim to have all the ewes come into winter quarters in a good strong condition and free from parasites. If they show any symptoms of being effected with stomach worms, I have them drenched with a good worm remedy at once. After this treatment I keep salt to which has been added some worm powders constantly before them. There are a number of different brands of medicated stock salt and worm powders in the market, all doubtless possessing some good qualities, and, I think, act as a preventative, but I have never yet found anything that would expel worms from sheep after becoming badly affected. Tobacco mixed with salt is also recommended as a preventative.

The sheep should be examined for ticks. It is certainly a waste of money to winter a lot of ticks. Just bear in mind that if you start in the fall with a few ticks, by spring the poor animals will have several hundred of the blood-suckers on them. It will pay to dip them, even though the weather is cold; in this case they can be protected until dry.

The method of feeding depends very much upon local conditions. Some

years a breeder may have more clover roots than another. I do not think it pays to feed light rations during the winter, even though the sheep are in

for light, and so arranged that they can be opened when the weather is very warm and muggy.

As soon as the ewes commence to lamb, the flock should be divided. When all danger of ewes producing a large flow of milk is passed, say a week or ten days, the feed should be increased to about all the ewes will consume, especially roots and the grain ration. By the time the lambs are two weeks old they should be docked and a place provided for them to feed separate from the ewes. Commence by giving a few cracked peas, oil meal, bran and cracked corn and clover and alfalfa hay. The troughs should be protected with some form of cover, so the lambs cannot get in with their feet and soil the feed. All feed not eaten should be cleaned out daily and given to the older sheep.

Pull Out Stumps
With the Famous Hercules!

Triple-Power

Pull an acre or more of stumps a day. Pull any stump in 5 minutes or less. Don't have looser land when it's so easy and cheap to pull the stumps out! Make 1000% profit by using the Hercules. \$1281.00 the first year on 40 acres! \$750.00 every year after. Let us prove it.

O. K. SEED STORE, Indianapolis, Ind.

Woman's Work and Welfare
Helpful Hints for Homefolks

reaping, garnering the harvest and getting ready for the winter, father and the boys are up and out before sunrise, and oftentimes 9 o'clock in the evening still finds them at work, while mother and the girls are in no wise behind in long hours of labor. But after the crops are all safely housed, the barn in good shape for the stock, the wood in the shed, the coal in the bin, the canning, preserving and pickling out of the way, there come the long evenings when the lamps must be lighted early, the outside work finished by dark, and the regular inside housework soon after, and from this time until 9 o'clock there should be a coming together of the family in a way not possible in summer time or in the long hours of work.

Now, in many homes—too many, alas!—but little attention is paid to the children during these golden hours of the day. They may be told to study, which is good for part of the evening, or to keep quiet while father reads the news, which is also good if father reads it aloud and the family afterward discusses what is read. Or, they may be allowed to read what they please if they will only refrain from talking, or go to a neighbor's on their promise to be home by bedtime.

But this does not give an ideal home life. Home should be a place in which lives are bound together by common interests; where minds are molded into seemly shapes and hearts are mellowed and softened by father and mother love—a place from which, by and by, will emanate sweet, tender,

fragrant memories of happy days when the family circle was unbroken; of fun-loving, rollicksome times in which father and mother were the prime factors; of evenings of wholesome games that gave rise to much harmless rivalry, laughter and merriment, and the last hour of the day given to song in which parents and children joined. Evenings spent in this way will give the children their rightful inheritance of beautiful memories.

An old writer very wisely says that "the meaning of song goes deep." Through all the years to come the children's lives are influenced, in a measure, by the songs that were sung in the home. In later years the memory of the lullaby song that was sung by the mother as she rocked them to sleep is like a tender, comforting hand laid on the forehead. Recalling the songs of young girlhood and boyhood, when life was sweet and free from care, will keep the heart young and attuned to the joyous things of life. The love song sung in the rose-time of life, when the heart was first awakened, will carry its fragrance down through all the years. The song of maturer years, sung perhaps with an aching heart, when recalled will bring the memory of the comfort that the song gave when sung, and that helped to comfort others.

In the many homes in which UP-TO-DATE finds a hearty welcome, let us sing together the best of the new songs, father and mother learning them with the children. Then let us join in the old songs that never wear out—Annie Laurie, Ben Bolt, Last

Thanksgiving

FAMILY REUNIONS on Thanksgiving Day are beyond value in bringing together the home folks and in renewing and keeping bright and warm on the altar of our hearts that love and affection that should never be allowed to die out.

In these festive comings together little grievances and jealousies are all forgotten and there is a warm friendliness shown and felt by all present. And when grandparents, parents and children gather around the family table to partake of the sumptuous repast that is generally prepared for the occasion, jollity and merriment find full sway and all are happy.

This is as it should be; and yet, underlying it all there should be that true spirit of Thanksgiving that leads into a special recognition of the great reasons we have for being thankful; for however rough the road may be, however dark and leaden the skies, there is not one of us but what has manifold reasons for earnest thanksgiving; for, to quote little Glad on the "Dawn of Tomorrow," "There ain't nothin' so bad as it might be."

In the olden days, when our forebears were surrounded by dangers, seen and unseen, they felt the need of a stronger Hand than theirs to ward off the perils that constantly confronted them, and to guide them into paths of peace and plenty. To them Thanksgiving was a solemn holy day, much of which was spent in prayer. Today much of the time is spent in "eating, drinking and making merry." These are both food in their way. Neither should be left out. There should be the thanksgiving and praise and there should be the hours of jollity and merriment.

Surely on this Thanksgiving Day our mothers, wives and daughters have special reasons for being thankful that our beloved country is not involved in the terrible war that is devastating homes, costing hundreds of thousands of precious lives and bringing untold suffering on helpless women and children.

"For life and strength and health,
Best of all earthly wealth,
We give Thee thanks.
For these, our friends so dear,
Gathered from far and near
This feast day of the year
In the old home,
We give Thee thanks."

Winter Evenings in the House

THE long winter evenings, so rapidly approaching, should be made the happiest time of the whole year in the old farmhouse. During plowing, sowing,

Most Important "First Aid" in Case of Illness

A comfortable, warm room night and day makes it much easier to take care of a sick person. Especially if the heat is from a portable stove that you can carry wherever you wish—the NEW PERFECTION Heater that burns clean, convenient, economical oil, most satisfactory of fuels.

This little heater will keep the family comfortable all winter, whether they are sick or well. Invaluable in early spring and fall when the regular fires are out.

PERFECTION SMOKELESS OIL HEATER

Look for the Triangle for Warmth, Comfort and Good Cheer

Burns 10 hours on one gallon of oil—can't smoke. No trouble to re-wick. In the New Perfection wick and carrier are combined. Fresh wicks come ready to put in, trimmed, smooth and ready to light. For best results use Perfection Oil.

Your dealer has the NEW PERFECTION Oil Heater on exhibition. He will be glad to show you the different models. Send us your name on a postal and we will forward you the NEW PERFECTION Book.

Moving Picture Machine

Moving Pictures in Your Own Home

This is a real, fine moving picture machine; just like the illustration; generates its own gas for light; does not need electric light, gas or lamp with this machine. Takes regular standard film; same as the real "Movie Show"; gives a big sharp picture nearly six feet square. We furnish films free with machine. It is made of black Japan sheet metal, beautifully finished. The latest mechanical 8-wheel mechanism for operating. Imported triple polished and ground lens; reflector to make strong light, much stronger than electric light. Gives clean, sharp and life-like moving pictures. A child can learn in a few minutes how to operate. Machine perfectly safe for any one to handle.

SEND YOUR NAME TODAY

and just say you want a moving picture machine FREE. We will tell you how any bright boy or girl, or any other person, can earn this wonderful moving picture machine in one day's time. The plan is very simple, any boy or girl can do the little work we ask. Don't hesitate, but act quickly. Be the first in your neighborhood to get one of these real moving picture machines without costing you a penny. Address

H. DAY, Manager, Department UF Springfield, Ohio

Rose of Summer, Old Folks at Home, Robin Adair, Land o' the Leal, Love's Old Sweet Dream, and a score of others equally worthy.

Let us teach the children all the best songs we know, and some of the foolish ones, too. No child should be deprived of the pleasure derived from singing Billy Boy, Old King Cole, The Song of the Owl, and kindred songs.

Let us encourage those who stand on the threshold of life to memorize large numbers of songs, that the singing of them may give pleasure to others and influence the lives about them.

Let us persuade the dear old folks to sing the old songs that are immortal, and let us all sing with them. Never mind if their voices are thin and wavering and sometimes sadly out of tune. By and by, when they sing "the song triumphant" we will be glad we sang with them in the old home.

Fine Thanksgiving Recipes

SCALLOPED OYSTERS—Scalloped oysters are best cooked in individual dishes or in low au gratin dishes, in which the cooking can be done quickly. Serve the instant they are cooked or the crumbs settle and the dish loses its lightness. For a quart of oysters take one cup and a half of sifted bread crumbs, half a cup of cracker crumbs and a scant half cup of melted butter. Divide the butter between the bread and cracker crumbs and reserve the cracker crumbs for the top of the dish. Clean the oysters carefully. Put a layer of oysters in a dish, sprinkle with bread crumbs, salt and pepper; add another layer of oysters with a tablespoonful or two of broth, crumbs and seasoning. Use the cracker crumbs above. Bake from ten to twenty minutes, according to the number of layers.

THANKSGIVING ROAST TURKEY—Select a young fowl and after thoroughly cleaning wipe it perfectly dry inside and out with a clean cloth; rub the inside with salt and stuff the breast and body. Dredge with flour, rub on a little soft butter; sprinkle with salt and pepper; place in a dripping pan and pour in a cup of boiling water. Baste often and cook until thoroughly done.

DRESSING—For an eight or ten-pound turkey cut the brown crust from slices of stale bread until you have as much as the inside of a pound loaf; put it into a suitable dish and pour tepid water over it; let it stand but one minute, as it soaks very quickly. Now take up a handful at a time and squeeze it hard and dry, placing it as you go along into another dish. This process makes it very light. When it is all dry toss it up lightly with the fingers, add pepper and salt, a teaspoonful of powdered summy savory and the same amount of sage, a half cupful of melted butter and a beaten egg. Add also a half canful of oysters, slightly chopped. Work all together and it is ready to put in the fowl.

Household Helps

IN MAKING CAKES, whatever eggs are to be used should be added after all the ingredients are well mixed. By observing this rule two eggs will be found to go as far in enriching the cake and making it light as three would if added at an earlier stage of the preparation.

To bake potatoes quickly, boil them in salted water for ten minutes, then put them in the oven. The boiling water will heat them through and they will bake in a short time.

Whenever you are baking cookies, pin a piece of muslin over the bread board, stretching it tight. Flour the muslin well and you can roll the dough as soft and thin as you please. A piece of muslin around the rolling pin is still another improvement.

Coffee stains, even when the coffee has been mixed with cream or milk, may be removed by rubbing the spots with pure glycerin. Rinse afterward in lukewarm water and press on the wrong side of the fabric (either silk or wool may be so treated) with a warm iron.

If windows are cleaned with vinegar and water they will be brighter and keep clean longer than if cleaned with water alone. Polish in the usual way with a soft linen cloth or leather.

Ink can be removed from white goods with tomatoes if applied freely. Cold milk is good when the stains are fresh, changing the milk as often as necessary. If very obstinate, and the material will stand hot water, the stain should be covered with melted tallow, then washed in the usual way.

To test drinking water put one teaspoonful of granulated sugar in a pint of the water you want to test. Cork tightly, place on the kitchen mantel shelf. If pure the water will remain clear; if not it will cloud densely and ought to be analyzed.

When ironing linen, if the article becomes scorched lay a wet rag over the mark and pass a hot flatiron quickly over it, causing it to steam freely. Repeat again and again until the mark disappears, which it soon will do if the garment is not really burned.

Egg stains on table linen should be soaked in cold water before the table cloth or whatever article may be sent to the laundry. The stains are easily soaked out in cold water, but putting them in hot water will "set" them, making them almost permanent.

What is Now the Fashion

6937—LADIES' SHIRTWAIST. New and serviceable; may be worn with separate skirt or embodied in costume. The back extends forward upon the shoulders in the manner of a small yoke. A plain, flat vest with a wide turnover collar of fancy design in one piece. Sleeves plain, but with ornamental cuff. Sizes 34 to 44 inches bust measure. Medium size requires 1 1/4 yards of 36-inch material, with three-fourths yard of 36-inch plain fabric for vest and collar.

6946—BUNGALOW APRON. Often worn instead of a dress rather than over one. Has a deep yoke. Yoke and skirt sections close in the center of the back and a strap from side seam to side seam holds in the garment to the figure. Small sleeves may be used or omitted. Sizes 34 to 44 inches bust measure. Medium size requires, for apron and cap, 4 1/4 yards of 36-inch material.

6929—DRESSING SACQUE. The sleeves may be long or short and the surplice closing of the front leaves the neck a trifle exposed. Sizes 36, 40 and 44 inches bust measure. Medium size requires 2 1/4 yards of 36-inch material.

6901—NIGHT GOWN. Front and back are plain and full length. Small turnover collar. Sleeves long or short. Sizes 36, 40 and 44 inches bust measure. Medium size requires 5 1/2 yards of 36-inch material.

6944—LADIES' DRESS. In this model the extension of the upper ends of the sleeves forms the shoulder yoke and the sleeves are cut with a little easement under the arm, to meet a similar shaping of the blouse. This is quite plain in both front and back, with open neck finished with a frill. The three-gore skirt is joined to a deep yoke and is gathered at sides and back. Sizes 34 to 44 inches bust measure. Medium size requires 4 yards of 44-inch material and 1 yard of edging.

6452—CHILD'S SLEEPING GARMENT. This is made without a yoke and with or without feet, as preferred. The closing is

down the back of the waist and across the waistline in the back. Canton flannel, outing flannel and sateen are excellent for winter use. Sizes 2, 4, 6, 8, 10 and 12 years. Medium size requires 3 1/4 yards of 36-inch material and three-fourths yard of edging for the neck.

6914—GIRL'S DRESS. The plain blouse dips down in front and back, forming a small tab in the center. This may be faced with contrasting material and have the appearance of a belt. The skirt has two gores. Slightly circular in cut, box pleats in front and back. Sizes 6, 8, 10 and 12 years. Medium size requires 2 1/4 yards of 44-inch material, with one-half yard of 36-inch contrasting goods to trim.

6928—GIRL'S COAT. Double-breasted and may close high up at the throat or lower as shown. Sizes 2, 4 and 6 years. Medium size requires 2 1/4 yards of 36-inch material, with three-fourths yard of 27-inch contrasting goods to trim.

6908—DOLL'S DRESS AND COAT. Cut in sizes for dolls measuring from 14 to 26 inches from crown to sole. Twenty-four-inch size requires seven-eighths yard of 27-inch plain goods and 1 1/4 yards of 27-inch goods for the dress and five-eighths yard of 27-inch goods for the coat.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50 cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THANKSGIVING? Yes, there is much to be thankful for. Young people have opportunities in this country that they have not anywhere else, and there is an equality of privileges that are not found in any other country. But whether those opportunities and privileges are made available depends upon the young people themselves—upon all the people, in fact. Young people should always have aspirations that lead them a little higher, not necessarily into a higher calling, but a higher position and greater achievements in their calling, whatever it is. And the grownups may well have the same aspirations. How powerfully that appeals to the farmers! What unlimited room is there for a better system of production and marketing! We always think of these things when Thanksgiving time approaches.

We will begin our letters this time by introducing this Illinois boy, and the other writers will follow:

DEAR CADETS—Here comes an Illinois boy who wants to correspond with boys and girls from other parts of the United States. I am 17 years of age and have read UP-TO-DATE for two years. It is certainly a fine paper, and if the farmers would listen to its teaching they would be more prosperous. I live on a farm, but I don't depend on farming for a living. I have three brothers and two sisters, but only one brother is at home. One is a fuel inspector on the Sioux Line railway and the other is in Salem, Ore. I like music and can play the violin best. I have taken sixteen lessons on it, and can play fairly well by note. We have an Edison phonograph, and I can play several pieces with it. I attended the State Normal at Carbondale last year, and hold a second grade teacher's certificate, but I am not teaching this winter. I am going back to school in December. I should like to receive letters from all the Cadet boys and girls, and will answer all I receive.—Claude Ferrell, Crab Orchard, Ill.

DEAR CADETS—I am a boy 16 years of age. I was born in Pennsylvania, and when I was a year old we came to Colorado, where I have lived ever since. We raise corn, wheat, oats, cane and millet. Our summers are dry and hot. The temperature is from 95 to 108 in the shade. In winter it is from zero to 28 below. I wish to receive cards and letters from girls and boys in every state in the Union.—Samuel Shafer, Holyoke, Colo.

DEAR CADETS—I am an Oklahoma boy of 18 years. We came from southern Minnesota and have lived here eight years. I am a faithful reader of UP-TO-DATE FARMING and think it can't be beat for a farm paper. We raise corn, maize, cane, kafir

corn, broom corn and wheat. There is no timber, just rolling plains. I live on a farm of 480 acres, and I must say I like the country better than the city. I would like very much to hear from the Cadet girls and boys, and will answer all letters received.—Kirby Pierce, Redpoint, Texas County, Oklahoma.

DEAR CADETS—I am a farm boy of sunny Tennessee, and I live on a farm of 40 acres. I read UP-TO-DATE FARMING and think it a grand paper. I think every farmer should read it. Farmers don't read enough, and we Cadets ought to do all we can to induce them to read the good old UP-TO-DATE. I like farming fine, and enjoy reading good farm papers. I especially like farming under the demonstration plan. We raise cotton and most all kinds of grain, such as wheat, oats, corn, buckwheat and barley; also sweet and Irish potatoes. Our farm land is generally level. We have hot summers and cold winters, but I like winters best, and the falling of the silver leaf and the night's cool breeze show us that the cold winter days will soon be here. I hope all of the Cadets will get busy and send me a shower of letters and post cards, for I just love to read letters, and some rainy day, after I've done churned for ma, I'll answer every one of them.—J. B. Washburn, Loretts, Tenn.

DEAR CADETS—Here I come, a jolly German American country girl. I live on a farm of about 160 acres in the good old state of Minnesota, but Nebraska is my native state. I just love farm life; it is much better than town life. We raise all kinds of crops and garden truck. I help outdoors in the busy season, but I love to do housework. I take UP-TO-DATE FARMING and think it a nice paper, so I would like very much to become a Cadet, for I always read that page first. I will be glad to receive letters and cards from all the Cadet boys and girls and will answer all I receive.—Alvine Behrens, St. James, Minn.

DEAR CADETS—I am a farmer boy of 18 years and I live on a farm of 150 acres. My mother has been taking UP-TO-DATE for three or four years, and I think it is a fine paper. I would like to receive letters and cards from all of the Cadets, and will try to answer all of them.—Leo VanVerth, Terra Alta, W. Va.

DEAR CADETS—I am a little farmer girl 11 years old, and I have a sister 7 and a brother 4. Papa has taken your paper eleven years. Our schoolhouse is a mile away, and there are seven churches in our neighborhood. So many gods, so many creeds, so many ways that wind and wind; while just the art of being kind is all this sad world needs.—Bernice Anderson, Crary, N. D.

DEAR CADETS—I am a farm boy and live with my parents on a 50-acre farm. We own 165 acres of work land, and we have three beautiful houses on our place. I work on the farm in the summer and at the carpenter trade during the winter. I read UP-TO-DATE FARMING and think it is a fine paper for the farmer, and boys and girls. I would like to receive letters and cards from all the Cadet girls and boys, and will answer all. Would be glad to ex-

change photos also.—M. E. Adams, North Harlame, N. C.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING. My father has taken it for about three years, and I think it should be in every home. I am 16 years old and live in an apple district where we grow the finest apples in the state. I would be glad to hear from all the Cadet girls and boys, and promise to answer all I hear from.—Paul Teal, Beaumont, Cal.

DEAR CADETS—May a wild west farmer boy of 25 years join you? I lease one of my father's farms in the foothills. I own two horses that I ride and drive, and I break my neighbors' horses for the use of them in the summer. I have lived here all my life, and I think it is a nice country. I have fine times fishing and hunting. I am subscribing for UP-TO-DATE and enclose 50 cents, for I enjoy reading the Cadet page very much. I stay alone much of the time, and I get a little lonesome, so I will gladly answer all the cards and letters I receive.—Marion H. Hackler, Whitmore, Shasta County, California.

DEAR CADETS—I am a little girl 11 years old, but I am a reader of UP-TO-DATE FARMING and like it very much. I live in the country, and we have two cows, three horses, two hogs, and some chickens. For pets I have two pullets, one white and the other black. I play on the piano some. We raise corn, wheat, buckwheat, rye and oats; also peaches, pears, plums, apples and grapes. I wish to become a Cadet of Equity and would be glad to get cards and letters from the Cadets, also photos, and will answer all I receive.—Mabel R. Grubbs, Trone, Va.

DEAR CADETS—I am 19 years old and have been reading the Cadet letters for sometime, and have concluded to send a letter and see how many of the Cadets will write to me. I am greatly interested in postoffice buildings, as I am the stenographer and bookkeeper for a contractor who deals principally in postoffice work. In fact, I would very much like a card of every postoffice situated in the capital of every state in the Union, and I will reply with a card of our new postoffice building which has recently been completed here at Wooster. My work compels me to stay in town though my home is in the country, and I spend nearly every Sunday in the country. The country is rolling in this locality, and there are some very beautiful scenes. I like the country very much, and I love all outdoor sports, music, painting, etc. In fact, I love everything beautiful. I will answer every one who will send me a card or letter.—Florence E. McAfee, 142 North Grant street, Wooster, O.

DEAR CADETS—I am a girl of 13 years and live about two blocks from town. My father owns a large store. I go to school and am in the eighth grade. I would like to exchange letters or cards with the Cadets.—Emma Lessmeier, Goehner, Neb.

DEAR CADETS—I thought I would try to become a Cadet. I live on a three-acre place in Creston, which is a very small town. We raise all kinds of garden vegetables and also sweet corn and popcorn. We have three horses, and as I love horses I go out driving sometimes. I also love all outdoor sports, and I love to read and sew. My father is a traveling agent for a medicine company and is not at home very much. I am 16 years old, and would like to exchange cards and letters with any of the Cadet boys and girls, and will try to answer all I can.—Anna Grundy, Creston, Ill.

DEAR CADETS—I am a boy of 19 and would like to join the Cadets. I am a farmer boy, but I will live in town this winter. I enjoy reading UP-TO-DATE FARMING and think it a good paper for boys and girls. My uncle takes it, and I would like for every one of the Cadets to write me letters or cards. I will answer every one, and I will exchange photos also.—Robert Woodridge, Highland Park, Ky.

DEAR CADETS: I have been reading UP-TO-DATE FARMING through the kindness of a friend, and I intend to subscribe for it myself soon. I enjoy reading it very much, and wish I could get it oftener. I am 16, and live in Missouri. I am attending high school this term and like it very much. I like to correspond with the Cadets. I will answer all cards or letters I receive.—Constance Gensert, Richfountain, Mo.

DEAR CADETS: Will you please admit a Central Wisconsin girl into your happy circle? I am 14 years old and have been a constant reader of UP-TO-DATE FARMING for about two years. I like it fine. My father owns a farm of sixty acres. We moved here eight years ago this fall. I think this is a very good farming country. I would be delighted to correspond with the Cadets.—Caroline Johnson, Auburndale, Wis.

DEAR CADETS: We subscribed for UP-TO-DATE FARMING only recently, but I like the Cadet page immensely. I live on a farm, and we raise corn, oats, wheat and rye. We also raise apples, peaches, pears, plums and grapes, and all kinds of vegetables. I am 14 years old and in the seventh grade. I have always lived in the country, and I do not think I would like the city. I wish to become a Cadet of Equity and would be pleased to hear from the boys and girls—will answer all.—Jewell Sellers, Ollie, Ga.

Good-bye now. Have a good time Thanksgiving, and realize how much better it is for a country to be at peace than at war. Considering what we teach, and how earnestly we are striving for the good of both young and old, I believe it would be an excellent plan to show our appreciation of this Thanksgiving season by trying how many readers we can secure for UP-TO-DATE FARMING.

Canada is Calling You to her Rich Wheat Lands

She extends to Americans a hearty invitation to settle on her **FREE Homestead lands of 160 acres each** or secure some of the low priced lands in Manitoba, Saskatchewan and Alberta.

This year wheat is higher but Canadian land just as cheap, so the opportunity is more attractive than ever. Canada wants you to help to feed the world by tilling some of her soil—land similar to that which during many years has averaged 20 to 45 bushels of wheat to the acre. Think what you can make with wheat around \$1 a bushel and land so easy to get. Wonderful yields also of Oats, Barley and Flax. Mixed farming is fully as profitable an industry as grain growing.

The Government this year is asking farmers to put increased acreage into grain. Military service is not compulsory in Canada but there is a great demand for farm labor to replace the many young men who have volunteered for service. The climate is beautiful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature and particulars as to reduced railway rates to Superintendent Immigration, Ottawa, Canada, or to

G. W. Aird
215 Traction Terminal Bldg.

Farmers Organization and Co-operation

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

About one month ago the Postmaster General designated several cities where the respective postmasters should specialize on making the parcel post more popular as a means of marketing farm produce direct to the consumers' kitchens.

One of the things the postmasters were to do was to get the names of families in the cities that wanted to buy direct from the producers, and the names of the producers who wanted to send articles direct to the consumers.

Among the cities designated were Chicago and Indianapolis. In our October 15th number we made some comments on the possible working of the plan, based on the report made by the Chicago postmaster. Or, speaking definitely, we pointed out the apparent weaknesses in the plan and gave our reasons for our conclusions why the parcel post would not be a material factor in solving the great marketing problem in Chicago.

On the 4th of November the postmaster at Indianapolis issued his list of people interested in the plan—would-be buyers and would-be sellers. The Indianapolis list is interesting in showing the great disparity in the number of city and town people to the people on farms who want to sell. There are only twenty-six families listed for Indianapolis and one in each of five towns, making thirty-one families who assert that they want to buy through the parcel post. Against this there were published 405 names of people who want to sell. These people represented 168 different post-offices.

This showing seems to indicate that the people who have produce to sell took much more interest in the move than those who consume. Of course, as far as this first list goes, the would-be sellers got the advantage of a very wide circulation, as it was printed in one of the daily papers. But there is no provision to so publish the names, and if the proportion of one buyer to twelve sellers is maintained in the future it must be apparent that the parcel post plan can not afford any appreciable relief to the people who are seeking better markets and more profitable prices, or to the other class which has been complaining about the high cost of living.

This paper has always contended that the parcel post had but little to commend it in marketing farm produce. There are many places where the plan has been tried, under probably the most favorable conditions that can be produced, only to be nearly abandoned in a short time. With such glaring examples, perfectly known by the postoffice officials, what can be their motive in spending time and money in attempts, that must be vain, to develop it in other places?

May it be to keep the people from seeking more practical methods of marketing? And how much influence is that class of people, who don't want the marketing problem solved because they make immense profits out of the present bad system, exerting on the postoffice department?

In our last issue we printed the following, and reprint it here as a basis for some remarks:

As manager of this district of the F. S. E., sometime ago I advised you that we wanted fruit and vegetables, and you published our wants in The Market Place. I have had letters from various people offering all kinds of truck. This is just what we wanted. But for the good of the service I will say that usually it was not offered in a business-like way. Sometimes there were too many strings attached. Again, the people usually asked more for their crops than they could be bought for from dealers here. Now I do not say that they should not have all they asked, but they surely can not expect us to pay more than current rates. So, if the market price is not satisfactory, let them follow the standing advice of UP-TO-DATE FARMING and hold awhile.

Yours to help in your worthy purpose to make business men of farmers,
R. M. TYSON, Secretary,
Tobias, Neb.

This paper sincerely wants to help all of its readers to market their crops. If the readers themselves will display a reasonable amount of business wisdom no person can conceive of the vast amount of selling and buying that can be done amongst just the farmers who are regular readers.

But, as Mr. Tyson wrote, those who

have produce to sell often make conditions that the would-be buyer can not meet, or the price asked is more than like stuff can be bought for elsewhere. Farmers must get it out of their heads that there are any people who are willing to pay them more than some other person will sell for. Also in these days the producer who hopes to find some other person who does not know the market price, and that he can "put one over on him," is doomed to be disappointed.

But the producers who are willing to divide the usual marketing tolls with the consumers can always find buyers. Take potatoes as an example. The price paid to producers is now as low as 23 cents a bushel in many growing centers, while farmer consumers (and others too) are paying 75 cents to retailers very commonly in Indiana and we are told that in southern Indiana, where the drought was the most severe last summer, the retailers charge \$1. In the southern states northern potatoes rarely retail for less than a dollar, and often for more. Now the people who are paying such prices in the ordinary way must save something if they buy direct. Unless they can, there is no object in doing it. So if the man who has potatoes to sell will share this difference between 23 cents and 75 cents or more, after allowing for transportation, both will reap big benefits and business can be done. A similar illus-

tration can be made for apples and many other things, including corn and oats for feed.

We do not aspire to make business men of all farmers. Human nature can not be changed in a short time and greed is just as prevalent amongst farmers as amongst other people. So we have taught a business system for farmers that meets the conditions as they exist. Even the farmers most devoid of business acumen find in it what they need. In this plan, which we believe will eventually be adopted all over the country, the individual producer surrenders his marketing to the organization that he belongs to and the producers of a whole community select one man as their business agent.

Thus the matters of markets and prices, grades and packages, credits and collections for all the producers of the community are looked after by one man and his assistants. With this system in vogue it will be useless for any tricky producer to "spike" his barrel, box or bale of produce and hope to "get by" with it. But all produce will be inspected on the loading platform, and after a grower has had 10 to 50 per cent rejected a few times he will set out to produce good stuff and leave the culls at home. Without such a system many farmers will take a chance that they can cover up the small, wormy apples, the scabby potatoes, the foul grain or the moldy hay and get the price of first-class produce

Now 90 Men Daily Can Buy a Car Like This

Reo the Fifth has for years almost constantly far out-sold our output. Thousands who wanted it were unable to get it. But we have built new factories—three this year. Now we have a capacity of 90 cars daily. From this time on we shall try to supply the men who want better-built cars.

Reo the Fifth is built for men who want the utmost in a car. R. E. Olds designed it. Into every detail he put the best he knew.

It takes six weeks to build it. There are countless tests and inspections. Utter exactness and super-strength are required in every part.

We limited our output to insure this perfection. At times, five men were waiting for every car we built.

35,000 Cars

We have now built with this

chassis 35,000 cars. Now there are 35,000 actual users advising others to buy this car.

To meet this demand we have this year built three immense factory additions. And this year's output is nearly twice last year's. We have practically stopped our advertising, yet we can hardly build cars enough.

Why Men Buy

Reo the Fifth is a car of extremes. It has vast over-capacity. It is built in a costly way. We spend on each car about \$200 more than we need to spend.

The result is endurance, freedom from trouble, low upkeep. The car stays new. Year after year it renders perfect service.

Men want these things in the cars they buy to keep.

Reo the Fifth is constantly kept up-to-date. It shows all the new ideas in body style, in finish and equipment. We have made 18 improvements this year.

And the price today is \$220 less than it used to be. This is due to larger output and to factory efficiency.

See the latest model. Go into the chassis with your dealer and see where this car excels. The more a man knows of motor cars the more he wants a car like this.

Sold by 1155 dealers. Ask for Reo Magazine, showing how this car is built, and we will tell you where to see it.

for it. For a fact they rarely succeed, but from this arises most of the complaints between the producer seller and the buyer.

With such a system for marketing in a community we say it will not be necessary for all the farmers to be good business men, because they have employed a business manager. There are also many other advantages of this plan, one of the chief of which is the assembling of all produce to market in car load lots. Of course, the prime object with every set of farmers, when they organize, is to get more money for their produce. To show the money benefits arising from co-operative selling through a central business manager or secretary, we have gathered some statistics from clearing houses of the Farmers Society of Equity and from some buying clubs in cities. The average prices are given in the following table:

ARTICLE	Local Country Paying Price	Realized by Producers by Direct Selling	City Store Price	Consumers' Direct Buying
Apples, bushel.....	\$.28	\$.59	\$1.20	\$.78
Beets, 4 bunches.....	.02	.05	.10	.06
Cucumbers, dozen.....	.08	.18	.40	.24
Corn, Sweet, dozen.....	.05	.10	.20	.12
Cantaloupes, each.....	.02 1/2	.06	.10	.08
Cabbage, head.....	.02	.06	.10	.07 1/2
Eggs, dozen.....	.14	.19	.27	.22
Grapes, 5 pounds.....	.12	.17	.25	.20
Lemons, dozen.....	.09	.16	.25	.18
Onions, peck.....	.12	.25	.40	.28
Pears, bushel.....	.25	.56	1.00	.67
Peaches, bushel.....	.50	.80	1.50	.96
Potatoes, bushel.....	.30	.50	.80	.61
Sweet Potatoes, bushel.....	.55	.71	1.50	.90
Tomatoes, bushel.....	.23	.55	1.00	.70
Watermelons, each.....	.06	.18	.35	.23

This showing is an eloquent appeal for co-operative selling in the country and co-operative buying in the cities. Now if both classes could be brought to appreciate the benefits of such a plan, and if they would be enterprising enough to develop such a plan instead of running after a will-o-the-wisp, like the parcel post, we would see the real beginning of the solution of the marketing problem.

To illustrate: If the 405 producers, who reported to the Indianapolis post-office that they want to sell direct to the consumers of Indianapolis, will now rent a building in Indianapolis and hire a business manager and ship their stuff by freight and place it in their own room for sale, and invite the consumers to get it there, it will be a great improvement over parcel post marketing. But they could even go farther than this. By each of them contributing about \$2 they can buy a motor truck and deliver to the consumers' kitchens.

The parcel post rate is 5 cents for one pound in the first zone, 14 cents for ten pounds, 24 cents for twenty pounds, 34 cents for thirty pounds, and 54 cents for fifty pounds. The containers are usually quite expensive and marketing by this plan involves much details. On the other hand, produce can be shipped by freight in the first zone for 10 to 15 cents a hundred-weight, about the cost by mail for two pounds, the packages can be inexpensive and the details only a trifle compared with the other plan.

The matter of delivery in the city will, of course, be quite an item. But this can easily be solved by starting to supply a limited zone from the first house and adding more receiving and distributing houses as the business increases, and so no long hauls need be made.

We would like to see the 405 producers who are seeking a better plan of marketing hold a meeting in Indianapolis and take this whole matter up. This office will give them every kind of co-operation that we can toward evolving a less expensive and more efficient marketing system. And what we recommend for Indiana and Indianapolis we recommend for all other places where this matter has been agitated. Also the people in the country should take steps to organize local clearing houses of the Farmers Society of Equity to bring about community co-operation for direct shipping to the final markets. This office will be pleased to also see that any person

who becomes interested in this plan is supplied with the necessary instructions and blanks to organize and report a community organization, on request.

If the blank below is used it will give this office the desired information and will enable us to give the party inquiring the information he seeks:

The Blank

Please answer the questions that apply to your case.

1. Do you approve of the idea as expressed in above article to hold a meeting of producers looking to direct marketing through central receiving houses?.....
2. Are you a person who has at any time reported to any postmaster that you want to market by parcel post?.....
3. What postmaster or city did you report to?.....
4. Do you want your community organized and will you take the lead to organize it? Or what are your recommendations to get it organized?.....

Signed

Address

GO TO OMAHA

and attend the three (3) great farmers' meetings from December 8 to 12. See display notice in this paper.

Lowest Prices Ever Made On World's Best Roofing

Edwards Patent "Grip Lock"

Corrugated

Brick Siding

Reo Steel Shingles

Garage

21 Ruby \$25 Gold Watch

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing Lasts as Long as Building Stands
Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end. Its cost per square is the lowest ever made. It has no up-keep cost. Always beautiful in appearance. Reducing cost of insurance.

EDWARDS Exclusive Tightcote Process

Makes Rust-Proof Roofing. The zinc spelter becomes practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingles, Grip Lock Roofing, Pressed Standing Seam or Roll Roofing, Ceiling, Siding, etc., is dipped in a bath of molten zinc, once at a time, after the metal has been stamped and required. The edges are galvanized as heavily as the sides. Not the space of a pin-point on steel exposed to weather.

How To Test Galvanizing
Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanized steel with your finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking. Protects Nail Holes—they can't Leak or Rust. Nails are driven through the under layer not exposed to weather—cannot rust. No special tools or experience needed to lay this Roofing; anyone can do the work—layer old shingles if you wish.

Reo Steel Shingles
Cost Less, Outlasts \$ Ordinary Roofing and gives you joy and pride forever. No matter what kind of a building you have in mind there is a style of EDWARDS Galvanized Roofing exactly suited to your needs.

FREIGHT PAID Lowest Factory Prices

Greatest roofing proposition ever made. We sell you direct—save you in-between dealers' profits. No matter what your building is, we simply ask the right price and our prices are lowest ever made for World's Best Roofing. Postal or coupon brings Roofing Book No. 1191.

ADLER'S FAMOUS No Money Down Free 30 Day Trial Own Time To Pay OFFER

You Save Middleman's Profit—Pay Only for Real Organ Value

My Original Direct-From-Factory-To-Home—Not One Cent In Advance—Free 30 Day Trial—Easy Payment Plan—Absolutely Wipes Out Middlemen—Banishes ALL Competition.

Read Every Word of My Remarkable Money-Saving Plan

The value of an Adler Piano or Organ in your home cannot be figured out in mere dollars and cents. The sweet music of either will bring into your home life those things which money cannot buy. So that lack of ready money or large income may not hinder any one from the enjoyment of music I originated my wonderful plan of selling pianos and organs which has made the name Adler a household word. More than 90,000 of these famous organs are now in the homes of the people—and when I say you pay only for real organ value when you buy one of my World Famed Adler Organs—winners of the highest prize at St. Louis World's Fair—also winners of Gold Medal at National Conservation Exposition, Knoxville, Tenn., 1913—it means a whole lot to you—your pocket book—in long years of continued service and satisfaction.

I Save You All "In-Between" Profits

I can and will save you \$48.75 because I sell direct from the \$1,000,000 Adler Organ Factory (greatest in existence) at lowest wholesale factory prices. The Adler Plan thoroughly wrecks organ prices, absolutely sponging out all "in-between," extra, middlemen's profits on other organs.

FREE 30 Days' Trial

Send no money in advance. I will ship you any World Famed Adler Organ you may select from my new, big organ book, for an absolutely free playing test—yes, keep it a whole month free—if it does not prove all I claim—just ship it back to me—I will pay freight both ways and your trial doesn't cost you a single penny.

And then a 30 days' approval test and your money back if my World Famed Adler Organ has not held up to every claim I make for it.

My World Famed Adler Organ must sell itself after a free trial in your home. You're the judge, because it is your money and I can not afford to have a single dissatisfied customer.

Small Easy Payments—No Burden To You

No Interest—No Collectors

After you have decided to keep my World Famed Adler Organ you can make arrangements to pay in small amounts as convenient. Ask about our Fall Payment Plan for the benefit of all who depend upon the harvest for income.

50-Year Guarantee

strongest ever made.

Give your own Time To Pay

Send Today For My FREE Wonderful Organ or Piano Book

—and money saving plan. It costs you nothing to find out how much better my World Famed Prize Winning Adler Organs and Celebrated Adler Pianos are than ordinary made-to-sell instruments. Just fill in coupon below and mail it to me. Let me send you my big handsome illustrated Organ or Piano Book and learn about the fairest, squarest, most liberal, most convenient Organ or Piano buying proposition you ever heard of.

25-Year Guarantee

The Greatest Piano Offer Ever Made

My Celebrated Adler Piano winner of Gold Medal at National Conservation Exposition, Knoxville, 1913, is better than pianos that sell for double the money. I let you have your piano on exactly the same terms as an Adler Organ—30 days free trial; all the time you want in which to pay.

Mail This Coupon To Day

C. L. ADLER, President, Adler Manufacturing Company, 5311 W. Chestnut St., Louisville, Ky.

FARM LANDS

We Call the attention of all farmers and others interested in real farming lands to our choice selection of 20,000 acres of fine smooth prairie lands, located in the southeastern part of the Gulf coast of Texas, at and near the towns of Hampshire and Winnie, Texas. The soil, covered with heavy blue stem and Buffalo grass, is a dark brown loam, with a sufficient amount of sand mixed. Subsoil is clay. These lands are adapted to general farming and are great producers of excellent corn, cotton, ribbon cane, rice, all forage crops, like milo maize, kafir corn, sorghum, and numerous other feed crops, assuring successful stock raising and dairying. These lands, located in the most beautiful climate, are now offered for sale at prices ranging from \$30 to \$60 per acre on very convenient terms. Here is the chance for farmers to obtain a better net result from their investment of money and time and work than on lands in the Middle West selling \$150 to \$300 per acre. This is a fact just considering the possibilities of general farming in this famous section, not counting the profits from truck farming and fruit raising, both of which are at home in the Hampshire-Winnie country. It is worth your while to look into this. If interested in this bona fide proposition, write at once for free booklet on Hampshire-Winnie to the owners, Theo. F. Koch & Co., 832 Transportation Bldg., Chicago, Ill.

For Sale 50,000 acres in the fruit and clover belt of Michigan, in Mason, Manistee, Lake and Wexford counties; fine for fruit, stock or general farming, grains, grasses and vegetables; prices \$10 to \$35 per acre, and much good land at \$18; payments \$10 to \$50 down and \$5 to \$10 monthly on 40 acres, or annual terms. Write for 72-page book and large map and ask about our private car excursion, leaving Chicago Tuesday, November 10; round trip fare to Wellston, my Michigan headquarters, \$8.30, rebated on purchase; return Friday, 7:20 a. m. Do not wait until spring, but come now and get a good selection. George W. Swigart, 2-1250 First National Bank Bldg., Chicago, Ill.

Two Well improved farms for sale, in high state of cultivation; 576 acres and 391 acres, respectively; just south of Lamoni, Iowa, in Missouri. No trades. Am sole owner. Description and prices on application. Address C. A. Springer, Gilman City, Mo.

Farms wanted. We have direct buyers; don't pay commissions; write describing property, naming lowest price; we help buyers locate desirable property free. American Investment Association, 71 Palace Bldg., Minneapolis, Minn.

Wanted Farm and timber lands for sale everywhere to keep our large selling force busy. International Realty Corporation, 10 S. LaSalle Street, Chicago.

Free Government Land. Nearly 500,000 acres in Arkansas now open to homestead entry. Guide Book, with lists, laws, etc., 25c. Township map of state, 25c additional. L. E. Moore, Little Rock, Ark.

Agents wanted for first-class Arkansas land proposition; no rocks, hills nor swamps; big money for reliable men and women. Call or write Wm. C. Uphoff & Co., Times Bldg., St. Louis, Mo.

Wanted Good farm, well located; give description and price; from owner only. Pollitt, Box 754, Chicago.

Little River Valley lands rich and cheap, on railroad. Robert Sessions, Winthrop, Ark.

Carolina Farms; all staple crops, truck, fruit. Write Henry T. King, Greenville, N. C.

FOR SALE—TOBACCO

Get a pound of satisfaction for 30c; Kentucky real leaf tobacco; postage paid anywhere, or 7 pounds, \$2; 11 pounds, \$3; 20 pounds, \$5. Order today. Novice Harper, Box 468, Mayfield, Ky.

For Sale 40,000 pounds best leaf tobacco, from 2 to 6 years old. Mail stamps for sample to Anton Wavrin, Franklin, Ky., R. No. 5.

HELP WANTED

Thousands government positions open to men and women over 18; \$95 to \$150 month; farmers have excellent chance; write immediately for list of open positions. Franklin Institute, Dept. K26, Rochester, N. Y.

Will Pay Reliable man or woman \$12.50 to distribute 100 free packages. Perfumed Borax Soap Powder among friends. No money required. R. Ward Company, 222 Institute Place, Chicago.

LIVE STOCK

I Have 100 head yearling steers for sale; also 15-16 pure, 4 to 6 weeks old, \$20 each, crated for shipment. One registered bull a year old, \$100. Edgewood Farm, Whitewater, Wis.

Holstein calves. Ten heifers and two bulls, 15-16 pure, 4 to 6 weeks old, \$20 each, crated for shipment. One registered bull a year old, \$100. Edgewood Farm, Whitewater, Wis.

Steers for sale, 60 head calves, weigh 515 lbs.; 45 head Angus, weigh about 675 lbs.; 60 Shorthorns, weigh around 900 lbs. All natives and good quality. W. W. Dyer, Ottumwa, Iowa.

Horse Owners—I guarantee results from my fat-tening recipe. No matter how old the horse. Wilburton, Okla.

Thoroughbred Poland China pigs of the 12-ton kind. They are beauties. Write, Alfred A. Nieves, R. 2, Victory, Mo.

MOVING PICTURE PLAYS

Write Moving Picture plays; \$50 each; all or some; (time); correspondence course not required; details free. Atlas Publishing Co., 380, Cincinnati, O.

PATENT ATTORNEYS

Ideas wanted. Manufacturers are writing for patents procured through me. Three books with list 200 inventions wanted sent free. Advice free. I get patent or no fee. B. E. Owen, 49 Owen Bldg., Washington, D. C.

Men of ideas and inventive ability should write for new "Lists of Needed Inventions," "Patent Buyers" and "How to Get Your Patent and Your Money." Advice free. Randolph & Co., Patent Attorneys, Dept. 28, Washington, D. C.

Patents that protect and pay. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

MISCELLANEOUS

Free for six months; my special offer to introduce my magazine, "Investing for Profit." It is worth \$10 a copy to any one who has been getting poorer while the rich, richer. It demonstrates the real earning power of money and shows how any one, no matter how poor, can acquire riches. Investing for Profit is the only progressive financial journal published. It shows how \$100 grows to \$2,200. Write now and I'll send it six months free. H. L. Barber, 452, 20 W. Jackson Boulevard, Chicago.

Young Man, would you accept and wear a fine tailor-made suit just for showing it to your friends? Or a Slip-on Raincoat free? Could you use \$5 a day for a little spare time? Perhaps we can offer you a steady job. Write at once and get beautiful samples, styles and this wonderful offer. Banner Tailoring Co., Dept. 923, Chicago.

Wash Your Clothes without rubbing. No lyes or acids. Send 10 cents in stamps for enough to do four ordinary washings. Agents wanted. The Ideal Mfg. Co., Dept. 1, Ligonier, Ind.

Seeds wanted. We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

2000 Ferrets for sale. Write for price list, it's free. Dekleine Bros., Jamestown, Mich. Box 80.

Herb Doctor Recipe Book, 10 cents. Reveals rare old Indian herb secrets. Indiana Herb Gardens, Dept. 3, Hammond, Ind.

100 Envelopes Your name and address printed on the corner, 30 cents, postpaid. Samples free. D. F. Breneisa, Wheeler, Ind.

A Great Week for Farmers

Three Very Important Meetings in Omaha, Neb., the Week of December 7 to 12

Beginning on December 8, the Nebraska Farmers' Congress will meet in Omaha, Neb., with headquarters at Hotel Rome. Last year the attendance at the Congress was about 1,000. Beginning on the 9th the Farmers Society of Equity's sixth annual convention will convene. Its headquarters will be at the Paxton Hotel. Delegates from many states will be in attendance at this convention. And on the 10th the new American Farmers Federation will open its convention. The headquarters of the federation people will be at the Hotel Millard.

So the second week in December promises to be the greatest week for important farmers' meetings in many years. Omaha should be the Mecca to draw thousands of farmers, particularly those who are dissatisfied with the distributing side of agriculture and want a better marketing system established. No farmer who can possibly attend any or all of these meetings should fail to go, as he probably will never have the opportunity again to meet and help, and listen to so many people who are capable of advising on the great agricultural problems, which are the greatest problems of the age, and problems of all the people.

W. S. DeLano, Lincoln, Neb., is secretary of the Nebraska Farmers' Congress; C. Hayes Taylor, Indianapolis, Ind., is secretary of the Farmers Society of Equity and temporary secretary of the American Farmers Federation. E. V. Parrish, care of Convention Bureau of Chamber of Commerce, Omaha, Neb., is in charge of local arrangements.

The sessions of the various conventions will, in all probability, be held in the assembly halls of the respective hotels. Rooms range from \$1 to \$2 for single occupants or 75 cents up if two or more occupy the same room. These rates do not include meals. Of course there are many other hotels, with varying rates.

We hope to have the pleasure of meeting a great many readers of UP-TO-DATE FARMING at the meetings.

An Equity Success in Wyoming

In December, 1913, a number of farmers near the town of Pine Bluff, Wyo., established a local clearing house of the Farmers Society of Equity with an initial membership of fifteen. These few members expressed their interest and determination by going to work to build up the local association, and new members were brought in steadily.

The neighboring vicinity of Albin became interested and in March, 1914, a local was organized at that point and this also has continued to grow and prosper. The Pine Bluff local now has a membership of 102 and the Albin local has forty-one members on the list.

The members first began shipping grain by shoveling it into cars, a very slow, laborious method, but the advantage in dollars and cents was so apparent to the farmers after giving the Equity system a fair trial that a short time afterward a day was set and the announcement made for a meeting to consider the purchase and operation of a co-operative elevator.

At this meeting there was a good attendance and after careful consideration it was decided to purchase a new elevator of 30,000 bushels capacity that was being offered for sale in order to settle up a business. They thereby demonstrated sound business qualifications in not attempting to build another competing elevator.

A stock company was organized, the value of shares placed at \$50 each, and a committee of two appointed for each little neighborhood with instructions to sell all the shares possible, for cash or bankable paper. Enough stock was soon subscribed and exchanged for the elevator and the business operations were begun on a practical scale and far more convenient to the members.

Immediately after taking possession of their elevator they met very strong competition from a line of elevators run by private capital, but the stockholders were in the main loyal and the grain came to the Equity elevator. The results were satisfactory and the members were well pleased. They had cause to be, for they were receiving considerably more for their grain than they were accustomed to receiving.

At this elevator these locals handle flour, coal and grain. During the first thirty-five days they sold 100 tons of coal, 40,000 pounds of flour, and bought and shipped several car loads of grain.

The entire business and social affairs pertaining to these two energetic and progressive communities are moving along most harmoniously and with no visible dissatisfaction. A car of binder twine was purchased in the summer at a saving of about \$800. A car of fruit was bought at a little over half of what it would have been sold for at retail by the regular dealers. Just recently these locals purchased a car of choice Idaho apples and will spend their winter evenings in full enjoyment of the benefits and pleasures secured through the Equity System.

This is a lesson and an example to other communities. Opportunities lie along the path of organization and co-operation through the Equity System.

WANTED

5,000 SUBSCRIBERS 5,000 COMMUNITIES
250,000 FAMILIES

To buy their apples from the growers direct in car loads and distribute them. By this plan our country people can get their apples for perhaps half the price they would pay the dealers. They will consume probably twice as many and this will help the producers amazingly.

The apple crop is very large and prices are the lowest they have been for years. Unless some extraordinary thing is done quickly, millions of bushels of choice fruit will sell too low, other millions of bushels will spoil in the orchards, millions of families will pay too high prices, and other millions will not get what they want. We believe the greatest increase in consumption can be brought about with the farmers, as the town and city people have ready access to the stores. So we want each country community to make up a car load order and buy direct. Get together. Appoint one man or woman your business manager. Report what you want to us and we'll print it free. A car load is 160 barrels, or 600 boxes, or 24,000 pounds in bulk. In Indiana 48 pounds make one bushel.

If you have apples to sell report to us also and we will print it free for the sake of marketing the 1914 apple crop at profitable prices and saving the would-be consumers from extortionate prices after only a part of the crop is stored by speculators.

This service is free to all readers.

Up-to-Date Farming, Indianapolis, Ind.

OUR MARKET REVIEW

Reports of Crops, Markets, Trade, Etc., With Advice

KNOW THE PRICE AND ASK IT

We believe the prices attached to the crops named below are fair and equitable and farmers ought to receive them. They are based on the Chicago market, unless stated to the contrary. When the price is paid in the market is the time to sell, allowing freight and a reasonable off of the central home price. We believe these prices will be paid before the next crops are ready, purely on demand. How people will and see these for these them, they will paid. But, regardless of the number reading the paper (the circulation is now over 200,000), those of our readers who demand these prices and hold for them, will be very sure to get them, because the world needs all of the crops, and can not get along with only part of them. Those who control may need to hold until the DUMPERS have unloaded, but their time is bound to come when THEIR price will be paid. **HOLD FOR THESE PRICES. SELL AT THESE PRICES WHEN THEY WILL BE PAID AND QUIT SELLING THE HOUR THEY DROP BELOW, THEN THEY WILL GO RIGHT UP AGAIN.** Keep in mind that the more farmers who hold for and ask the prices the sooner they will come, because of reducing the supply in other hands. A fair price, known by the producers, and that price demanded, will make marketing and prices of farm products as definite as any commodity produced in the country.

The following prices are based on conditions as they exist now. Should conditions change materially in a short time, like the end of the European war, it will make revisions necessary. We predict the war will be a long one.

Prices are based on Chicago unless stated to the contrary.	
WHEAT—No. 2 red.....	\$1.25

For current market prices see below.
SUMMARY of the general trade conditions of the country, as of November 7, and compiled by Bradstreet's, follows:
STATE OF TRADE—Improvement. Financial affairs in better shape. Large grain exports. Winter wheat area large and condition good. Better feeling at south. Prices higher for cotton. Exports increased. Weather too warm for retail trade. Industries slack. Iron and steel on bottom. Prices low. War orders good. Live stock trade disorganized by epidemic. Clearings larger for week. Small for October. Failures numerous. Building expenditures smaller.

The better tone in business continues. One factor that helps in the betterment is that the fall election is over. Prices for the cereal farm crops are good and some improvement has come to prices for cotton. Live stock, however, is lower and live stock interests are badly upset because of the dread foot-and-mouth disease and the rigid quarantine that is instituted wherever an outbreak is discovered. Several states or parts of states and many of the stock yards of the country are already under the ban. Other exceptions to the general good prices are potatoes and apples. They present marketing problems that it is impossible to successfully cope with under the present system of distribution, storage and sale. This paper, however, shows a way for some enterprising growers to get better prices than the usual markets afford. If other papers would do the same thing greater markets would be found and enormous benefits would be reaped by both producers and consumers. The weather has continued unseasonably mild. This has helped in affording late pasturage, except where droughts prevail, and an unusually good opportunity to gather the corn crop and attend to autumn work. Wheat sowing is still being prosecuted in some southern and southwestern states. The acreage of wheat will break all previous records.

The price of wheat has fluctuated much since our last report. The bears made good use of the daily receipt statistics, which were very heavy, while, on the other hand, the bulls were helped by the fact that the sales for export to Europe broke all former records. Our visible supply report shows that the bears had the advantage because the increase is over ten million bushels since our former report. But since this report of visible supply was made, re-

ceipts have fallen off and we expect our next report to show a liberal decrease. The trend of wheat prices is still upward, and, barring peace talk, which is a remote possibility, we look for considerably higher prices.

The corn visible is less, but other grains are more than our former report. Price of corn is higher, while oats is a little lower. Attention is called to the price of new yellow corn at Chicago, 73 cents.

Potatoes are in a bad way. Considering the great export demand for several food products, we believe the time will come when potatoes will not be held in such contempt. It may be a gamble to hold for a better market, but we believe it is a fairly safe one. At any rate all the surplus beyond immediate consumption that reaches the market is held by somebody. The question should be, who can afford to hold them better than the people who produced them? If the speculators have put the price down to a point that they feel safe in storing, why is it not wise to take a cue from their action and the growers hold them?

Beans promise to go to fancy prices. The crop of broom corn is not large and higher prices are already being paid. This is another crop that we strongly advise storing for a further advance. Somebody is storing. Why not the farmers? The cotton marketing problem has not been solved, but more demand both at home and abroad has made prices a little better. The effort of bankers to get \$135,000,000 together to advance on stored cotton is progressing favorably. If it is consummated we hope the growers will store and accept a reasonable advance rather than sell at a low price and allow the middleman to store it. We are anxious to see what terms the bankers will make if they complete the pool.

Apples. The best thing the apple grower can do, as we see it, is to get busy after trade in rural communities. This paper will do its share. Other farm papers ought to fall into line.

Advice

WHEAT—Hold it for \$1.25 for cash wheat in central markets. **CORN**—Sell old corn at market price. Sell some new corn, if to spare, at around 60 cents from the field. **OATS**—Will probably sell higher. **POTATOES**—See advice above. **BROOM CORN**—See advice above. **COTTON AND APPLES**—See comments above.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on October 31, 1914, with comparisons, are shown in the following table:

	Change same period last year	Change from a year before	Change from 2 years before
WHEAT.....	X1,987,000	X10,291,000	X24,275,000
CORN.....	- 959,000	- 3,511,000	X 585,000
OATS.....	X 754,000	X 694,000	X13,738,000
BARLEY.....	- 195,000	X 194,000	X 1,720,000

The visible supply of wheat in Canada on the same date was 41,588,000 bushels. This is 2,199,000 bushels more than two weeks before, but is 381,000 bushels less than a year before. The visible supply of oats was 4,588,000 bushels on the same date, which is 212,000 bushels more than two weeks before and is 3,591,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on November 7, two weeks before and a year before as follows:

	Nov. 7, 1914	Two weeks before	A year before
Chicago.....	1.15 1/2 @ 1.16	1.13 1/2 @ 1.15 1/2	94 1/2 @ 95 1/2
St. Louis.....	1.12 1/2 @ 1.13 1/2	1.11 1/2 @ 1.13	93 @ 94
Kans. City.....	1.08 @ 1.09	1.08 @ 1.08 1/2	89 1/2 @ 90 1/2
Cincinnati.....	1.14 1/2 @ 1.15	1.13 @ 1.13 1/2	95 @ 96
New York.....			97 @ 98
Minneapolis—Spring wheat, No. 1 hard.....			1.18 1/2 @ 1.19
No. 1 northern.....	1.14 1/2 @ 1.17 1/2		A year before, 85 1/2 c and 83 1/2 @ 85 1/2 c respectively.

CORN, NO. 2, WHITE
Chicago..... 78 @ 78 1/2 75 1/2 @ 74 1/2 72 1/2 @ 72 1/2
St. Louis..... 80 78 1/2 74 1/2
Kansas City..... 71 1/2 @ 72 78 75 1/2
Cincinnati..... 79 82 1/2 77 @ 77 1/2
New York..... 80

Note—New yellow corn was quoted in Chicago on the same day at 73c.

OATS, NO. 2, WHITE
Chicago..... 47 1/2 @ 48 1/2 43 1/2 @ 44 1/2 41 1/2
St. Louis..... 49 50 1/2 42
Kansas City..... 47 48 1/2 41
Cincinnati..... 50 @ 50 1/2 50 @ 50 1/2 41 @ 42 1/2
New York.....

Future Grain Prices

Chicago grain futures closed on November 7 and two weeks before as follows: Wheat—December, \$1.17 1/2; May, \$1.24 1/2. Two weeks before, \$1.58 and \$1.51 1/2 respectively. Winnipeg, Canada—November, \$1.20 1/2; December, \$1.19 1/2; May, \$1.24 1/2. Two weeks before December future was \$1.15 1/2. Corn—December, 70 1/2 c; May, 73 1/2 c. Two weeks before, 69 1/2 c and 79 1/2 c respectively. Oats—December, 50 1/2 c; May, 54 1/2 c. Two weeks before, 50 1/2 c and 52 1/2 c respectively.

Chicago Produce Market

Chicago, November 7, 1914
Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday.....	80	140	100
Tuesday.....	75	50	45
Wednesday.....	65	80	80
Thursday.....	40	85	35
Friday.....	45	75	50
Saturday.....	30	55	40
Total, 6 days.....	335	485	350

A fair trade at steady prices. Dealers believed a better feeling existed, although values showed no betterment. Receipts were smaller and the buying of the last few days has been sufficient to reduce the accumulation of stock on track.

Sales reported were: Per bushel, Wisconsin, bulk—1 car root rotten, at 35c, 2 cars at 30c, 4 cars at 32c, 3 cars at 33c, 5 cars at 35c, 2 cars at 38c, 3 cars at 40c. Minnesota, white—1 car at 40c. Per bushel, Minnesota, white, bulk..... 35 @ 45c Dakota, white..... 40 @ 45c Michigan..... 35 @ 45c Wisconsin..... 28 @ 45c

The price of potatoes is 8c to 10c a bushel lower than two weeks before and about 30c a bushel lower than a year before. Our advice is that the price being paid at country points is from 20c to 30c a bushel for qualities poor to choice. Considering the market this is about as much as can be realized in the ordinary way. The advice of this paper, however, has been for the producers to try to connect with communities where potatoes are needed and supply the demand direct. When this can not be done, then we advise storing.

SWEET POTATOES—The market was quiet today. There is little jobbing business on Saturdays. Steadiness of prices continues.

Burrels, Virginia..... \$2.25
Hampers, Virginia..... 4.15 @ 4.25
Maryland..... 1.25
Illinois..... 1.00
Virginia are 10c a barrel lower than two weeks before and Jerseys are 40c a barrel lower than quoted two weeks before. Maryland hampers are quoted 10c higher than two weeks before. A year before Virginia barrels were quoted \$1.35 to \$1.60. Jerseys \$2.60 to \$2.85. Thus we see the price of sweet potatoes is considerably higher than a year before, while the price of Irish potatoes is very much lower.

BEANS—A firm feeling lately has prevailed. In the case of Pea Beans there lately has been a small improvement. Demand for this line very fair and steady. Arrivals have been running very moderate. On the part of country holders there has been a firm feeling, with no disposition to crowd sales. Other beans quiet, but some business going on and they also have been firm.

Pea Beans—Hand-picked, choice..... \$2.50 @ 2.60
Common..... 2.25 @ 2.35
If poor, lower.
Red Kidneys..... 3.25 @ 3.50
Brown Swedish, long..... 2.50 @ 3.00
The price of choice pea beans is 10c a bushel higher than two weeks before. A year before choice hand-picked pea beans were quoted \$2.15 to \$2.20. Other

varieties are practically unchanged from two weeks before.

HAY—Receipts, 879 tons. Choice prairie hay scarce and firm. All other descriptions of both prairie and timothy hay in fair supply and steady. Demand moderate.

Choice Timothy Hay..... \$16.50 @ 17.50
No. 1 Timothy..... 15.00 @ 16.00
No. 2 Timothy..... 12.50 @ 13.00
Kansas, Iowa and Nebraska Prairie..... 6.00 @ 11.00
Illinois and Wisconsin Prairie..... 7.00 @ 8.00
Choice timothy hay is 50c a ton higher than two weeks before. A year before choice timothy was quoted \$18 to \$19.

STRAW—Rye straw quotable at \$8.50 @ 9. Oat straw at \$6 @ 6.50. Wheat straw \$6 @ 6.50. The price of straw is unchanged from two weeks before. Also it is quoted the same as a year before.

BROOM CORN—Sales are only in a very moderate way. Car lots are dull. Per ton, Illinois Corn..... \$180 @ 190
Western..... 60 @ 90
Damaged less.

The price is the same as quoted two weeks before. However, they will pay more and buyers at country points are bidding more, mainly because of the disposition of the growers to not sell at prices quoted and the fact that a great many growers have gone together and stored their broom corn for their own account. The advance in the price has already made storing a profitable move.

APPLES—Generally speaking, the market was quiet. Outside orders small and trade mainly local.

A good deal of the barrel fruit offered is undersize and ordinary to fair. This rules dull and weak. No. 1, fine, large apples rule steady. They are moderate sale. Shows, Wagners, Spies and Greenings have the preference. No. 2 stock and odd varieties dull.

Not many bulk apples coming, yet all there is demand for.

Western boxes sell in a moderate way. They are abundant. Some of the large Jonathan are overripe. These have to be sold low to peddlers.

Chicago prices range as follows: Baldwins, \$1.75 @ 2; Ben Davis, \$1.50; Winesaps, \$2 @ 2.50; Wagners, \$2 @ 2.25; Kings, \$2.25 @ 2.50; Jonathans, \$3.50 @ 4; Greenings, \$2.25 @ 2.50, etc., all per barrel. Bulk apples per 100 pounds, orchard run, hand-picked, older and culled out, depending on variety, condition, etc., run from 50c to 70c. Lower grades at 30c to 40c per hundred pounds.

Western Box Apples—Delicious, \$2 @ 2.25; Jonathans, \$1 @ 1.50; Grimes Golden, \$1 @ 1.40; Spitzenburg, \$1.50 @ 1.75, etc.

To Bring Seller and Buyer Together

There is an enormous demand in every part of the country, amongst farmers and people in towns and cities who are readers of this paper, for farm products that are grown in other parts of the country. Therefore, as an additional help to members of the Farmers Society of Equity, we have established this service or any person who will become a member by now paying the entrance fee of \$2.50, may report his crops to sell or what he wants to buy, to the National Clearing House, F. S. E. and get this service FREE.

Rules
To save unnecessary correspondence, the quantity, variety, grade, condition as regards packaging or bulk, and price wanted should be given. If an article that may be marketed by parcel post, a delivered price should be named. Prospective buyers can state what they want and may name the price they will pay. **TERMS**—They may be as agreed upon. Mail shipments should be cash with order. Honest transactions are imposed on every person who uses this department, and when writing.

THE NATIONAL CLEARING HOUSE, FARMERS SOCIETY OF EQUITY, INDIANAPOLIS, INDIANA.

FOR SALE

KAFIR CORN AND FETERITA—Pure, clean and fine, for seed purposes. R. S. Godfrey, Parma, Okla.

BUILDING MATERIAL—Houses, barns, bungalows, cottages, garages, etc. All material supplied ready-cut to be erected. Best and cheapest. Write for catalog No. 610 before you buy. North American Construction Co., 611 Aladdin Ave., Bay City, Mich.

OLD CORN AND OATS—F. O. B. Kempton, Ind. Corn, 50c bushels, price 75 cents per bushel of 70 pounds in ear or 50 pounds shelled. Will fill out car with oats at 46 cents per bushel of 32 pounds. Frank Ordell, Philo, Ill.

APPLES—500 bushels of Nos. 1 and 2. Varieties are Stark's, Baldwins, Golden Russets, Greenings, Wagners. Price \$2 per barrel. Glen Young, R. F. D. 3, Shelby, Mich.

POPCORN—First-class rice popcorn, 3 cents a pound in ear, in lots of 10 bushels or more. Fleete Gephart, R. 3, Miamisburg, O.

APPLES—Have a car of Baldwin and Northern Spy apples, barreled stock. Also upland grown Michigan potatoes. Melvin Seeley, Bangor, Mich.

POTATOES AND HAY—C. L. Deemer, R. 1, Summer-ville, Pa.

UP-TO-DATE FARMING

17th Year

December First, 1914

Number 23

FRANK BOYER

Does This Remind You?

The Mission of this paper is to give farmers a balanced education---as much on marketing as on producing---and to help them to get more money for their crops

Mr. Edison's
Wonderful
New Instrument

NEW!

Master
Instrument

Edison's Latest Invention

Mr. Edison's
Pet and Hobby

WRITE today for our new Edison catalog—the catalog that tells you all about the wonderful new model Edison with Mr. Edison's new diamond point reproducer—the new parlor grand style. It will also tell you about our new Edison offer! Now read:

Free Loan—

We will send you the new model Edison Phonograph and your choice of all the brand new records on an absolutely free loan. We want you to hear all the waltzes, two steps, vaudevilles, minstrels, grand operas, the old sacred hymns, every kind of comic and popular music, also your choice of the highest grade concerts and operas, as rendered by the world's greatest artists. Entertain your family and friends. Give plays and concerts right in your own parlor. Hear the songs, solos, duets and quartettes, the pealing organs, the brass bands, the symphony orchestras, the choirs of Europe's great cathedrals, the piano and violin concerts, virtuoso—all these we want you to hear free as reproduced on the new Edison.

Then, when you are through with the outfit, you may send it back at our expense.

Remember, not a penny down—no deposit—no guarantee—no C. O. D. to us—no obligations to buy—a full free trial in your own home—direct from us—direct to you. Returnable at our expense or payable (if you want to keep it) at the actual rock-bottom price direct from us.

The Reason:

Why should we make such an ultra-liberal offer? Why should we go to all this expense and trouble just so you can have all these free concerts? Well, we'll tell you: we are tremendously proud of this magnificent new instrument. When you get it in your town we know everybody will say that nothing like it has ever been heard—so wonderful, so grand, so beautiful, such a king of entertainers—so we are pretty sure that at least some one, if not you, then somebody else, will want to buy one of these new style Edisons, especially as they are being offered now at the most astounding rock-bottom price and on easy terms as low as a few dollars a month. But even if no one buys, there is no obligation and we'll be just as glad anyway that we sent you the new Edison on our free trial; for that is our way of advertising quickly everywhere the wonderful superiority of the new Edison.

among all his wonderful inventions is his phonograph. He worked for years striving to produce the most perfect phonograph. At last he has produced this new model. Think of it; over 25 years of work on all these epoch-making inventions—then his pet and hobby perfected!

A Happy Home

Happiness is life—and real happiness is found only in a real home. And by a real home I do not mean a house with a yard or farm around it. Oh, no! A real home is the place where the happy and united family gather together for mutual enjoyment and recreation. And the Edison makes this possible, for it stands supreme as the greatest home entertainer. It will mean more than entertainment and merriment, more than an hour of amusement—yes, it will mean genuine pleasure of the lasting sort—helpful entertainment and culture of the most beneficial kind. It will mean the family united—a new home.

Such a variety of entertainment! Hear the latest up-to-date song hits of the big cities. Laugh until the tears stream down your face and your sides ache from laughing at the funniest of funny minstrel shows. Hear the grand old church hymns, the majestic choirs sing the famous anthems just as they sing them in the cathedrals of Europe. Hear the pealing organs, the crashing brass bands, the waltzes, the two-steps, the solos, duets and quartettes. You will sit awestricken at the wonderful grand operas as sung by the world's greatest singers. You will be moved by the tender, sweet harmony of quartettes singing those old melodies that you have heard all your life. Take your choice of any kind of entertainment. All will be yours with the Edison in your home. Send the coupon today.

Dear Reader:— Listen to Me!

YOU may believe every word I say. If you will, the time you spend in reading this advertisement will be the most profitable period of your life. I can put you in the soap business where you can easily make \$150.00 per month. Any bright man or woman can make more money working for me than in any other way. I have hundreds of agents making \$2,000.00 a year. I have always been in the agency business, myself, and I know it from A to Z. I will teach you how to make sales and make you successful. I have made money in the agency business, and many of the agents I have taught have made their pile and retired.

I now have a much better proposition than ever before—one that makes my agents more money, and I like it better myself. The reason my agents have been so successful is that I do not handle junk, tinware or cheap John goods of any kind that never lead to repeat orders. I do not pay my agents with premiums, but they get hard cash and soon have money in the bank. It is repeat orders that make money in any business. Go into any home on Monday morning and you will find them washing; go to the neighbors and you will find they are washing too. It is the same thing all over the country. The demand for soap is unlimited, and repeat orders never cease. Now, what does this all mean? It means that someone is getting the enormous profit from your territory which should be yours.

There is big money in the soap business and I give my agents the big end of the profit—a profit so large that I hesitate to state in this public manner what it is, but will be glad to advise you confidentially when you write me. Suffice it to say for the present that you will be satisfied. I can give you a chance to make such a big profit that you will be more than satisfied with your income and willing to stay with me year after year and be one of my loyal representatives. I personally teach every agent how to make money and make it fast. My plan has been a great success, and I will give it to you FREE. Now, I want to say to every man or woman who is anxious to make money and better their condition, write me. Don't lose a moment's time, but write me at once, and address your letter to **JOHN B. HECOX**, General Manager of the Wolverine Soap Company, 306 Water Street, Portland, Michigan.

Mention Up-to-Date Farming

California 40 Acre Special

Write for description of our 40-ACRE SPECIAL, No. 51, growing walnuts, oranges, almonds, prunes, alfalfa. What We Want You to Know and Why

Being a Few Words on Particular Matters

When Even Truth Deceives the Unwary

When the nor'westers with a saw-teeth edge on them come whistling and shrieking across the prairies, over the hills and through the hollows, driving us with frosted ears, tingling fingers and red noses to the cozy corner between the kitchen stove and the wood box, we pick up a paper and read with accelerated interest the advertisements of the land companies selling fortune foundations in the sunny south, at so much per foundation. It "sounds good," as the man said after listening to his table neighbor eat soup, but have a care. Those statements may be true, but yet not be all of the truth, and what is not told is probably of more importance than what is. A half-truth is frequently more deceptive than a falsehood. Have a care. There are some things worse than nor'westers with saw-teeth edges, and we always have the cozy corner and the wood box.

The Importance of Cotton

Not all farmers, even in the cotton belt, realize the place held by cotton in the commercial world. Cotton, raw and manufactured, comprises more than one-fourth of all our exports to foreign countries. A very large proportion of the cotton manufactures exported from this country consists of cloths, sent during the fiscal year 1914 chiefly to the following countries and sections: To China, 89,000,000 yards; the Philippine Islands, 86,000,000; the Central American republics, 36,000,000; Cuba, 24,000,000; Haiti, 23,000,000; Canada, 21,000,000; Aden, 18,000,000; British West Indies, 15,000,000; India, 14,000,000; Santo Domingo, 11,000,000, and Chile, 10,000,000. Europe as a whole took 7,000,000 yards; South America, 41,000,000; Oceania, 95,000,000; Asia, 125,000,000; Africa, 9,000,000, and North America, 138,000,000. Germany's cotton mills have, until the war, taken 800,000,000 pounds of raw cotton from the United States, fully four-fifths of all the cotton used in German factories coming from the United States. The United States consul at Breslau states that, despite the war, American cotton can be shipped to Germany via Denmark and the Netherlands, and that up until October 1 at least the mills and factories had been running full time, presumably on supplies obtained before the outbreak of the war. But at the present time little cotton is moving, and consequently business in the south suffers accordingly.

An Appeal to the Christ-Spirit

The greatest war the world has ever known is devastating Europe. Many thousands have already perished and thousands more are dying of their wounds. The continent has become a great slaughter house. All through Belgium, France and Germany, Russia, Austria and Serbia, the war has left communities filled with silent sufferers, whose fathers, brothers, husbands and sons will return no more. Who can adequately picture the miseries that have been wrought in the homes of the humble? Every day the cable brings stories of their wretchedness—women and little children and feeble old folks sitting amid the smoking embers of their dwellings, or tramping the country roads, terror-smitten, hungry, shelterless, sleeping in woods and hedges—waifs of the war. The Christian Herald, the great American Christian weekly, of New York city, is now organizing relief work for the widows and orphans of the war in Europe. Efficient committees will have charge of the work among the silent sufferers in the different countries. Every dime and every dollar contributed to the fund will be used undiminished for supplying food, shelter, clothing and other necessities for these unfortunates. We urge every one who reads this to have a personal share in this work. And in sending your gift, let it be accompanied by an earnest prayer that God in his great mercy will shorten Europe's time of trial and that enduring peace may follow.

Creamery Promoters in West Virginia

Creameries are good instruments for the development of any agricultural community, where there are enough cows to support such an enterprise, but to go into a section where there is practically no interest along dairy lines, organize a stock company and open a creamery is reprehensible. The history of several such cases recently enacted in West Virginia is that a man will enter a prosperous community, claiming to be a practical dairyman, affiliates himself with two or three of the most influential and prosperous farmers and shows them the advantages a creamery affords. These men will then go with him to see some of the neighbors, and interest is agitated to such an extent that before the hard-working farmers realize what they are doing they have signed their names to a contract which will bind them for one or two shares of stock at \$100 each. The creamery will open with no cream routes established and not a sufficient number of cows to supply the cream required. As a result the plant will shut down after operating from sixty days to six months and the farmer has his money locked up in something that will not realize 25 cents on the dollar. However, this is not the worst of it. Any prospects that the section might have had of becoming a dairy section have been paralyzed. Again, the prices charged for the creamery machinery is from 25 to 50 per cent in excess of what it should be bought for from a reliable creamery supply company, and even then the plant is not always completely equipped. It requires about 400 good cows to support a creamery.

A specialist can be obtained from the dairy division of the state agricultural college who will determine the proper machinery necessary and will give an accurate estimate as to the cost. No contracts should be signed with any creamery promoters until after an expert from the Department has looked over the proposition to determine whether a creamery can be profitably established. By acting upon this advice, which costs the farmer nothing, serious losses may be avoided and more efficient creameries established.

The biggest dollar's worth you ever got in your life.

Thirty-one hundred and eighty pages of clear, precise, up-to-date farm information for one dollar! Just as a plain, raw commercial bargain in reading matter, this takes the cake. You get your money back for any unexpired portion of your subscription, and out of 800,000 only twelve asked for a refund last year. 1 out of 66,666. \$1 for 5 full years is the price. Send A Dollar Bill today.

"The Type That Tells"

There are Real Reasons why the ROYAL

stands first in quality typing. There is the new Royal way of sending direct force from the fingertips to the type—at every powerful hammerstroke of its accelerating type-bars of carbon steel!

And there is a rigid carriage that meets the millions of blows of the type—the "business end of the typewriter."

The Royal way is "better business," for its beautiful presswork adds the forceful stamp of quality to every letter you sign.

Purcell High-Grade Pianos

Direct from Factory to Home

FREE TRIAL

No Money Down 2 to 3 Years' Time to Pay—NO INTEREST

PURCELL PIANOS need no introduction to musicians or musical people, as they are to be found in the leading schools and colleges all over the United States, and are in thousands of homes of well known musicians.

The Purcell instruments have been on the market for a number of years, and have been largely purchased by professional musicians and by schools, which are by far the most exacting of all buyers of pianos.

It is the same in selling pianos as well as many other articles; if the producer deals direct with the consumer, the great saving is obvious. Suppose the farmer could in some way ship his products direct to the consumer in the large cities, instead of first selling to a local buyer, who in turn sells them to the commission agent or wholesale firm in the cities, who sell to the retailer, and finally the retailer to the consumer. Isn't it a fact that the user must pay at least one-third more for this product than he would if he could purchase direct from the producer, for as you know, the wholesaler, and retailer, too, each must pay his expense of handling and have profit besides? My plan in selling pianos direct eliminates all go-between expense.

WHAT PROMINENT MUSICIANS THINK OF THE PURCELL PIANOS

C.A. HAVENS
"I wish to express my entire satisfaction with the Purcell Pianos."

JOEL MOSSBERG
"A perfect accompaniment to the Voice."

LOUISE DRIGGS UPTON
"Best Support to the Voice"

EMIL ANDERSEN
"The tone of the Purcell is clear, sweet and of great volume."

ANNA SWANSON
"The Purcell Piano is most satisfactory to me in every respect."

A. ALFRED HOLMES
"The Purcell Piano meets my requirements in every respect."

G. ADOLPHUS STAHL
"Tone and Action is that which is only found in the Best Grades."

Don't Consider Any Piano Until You Get My Offer and FREE BOOK

which explains all about Purcell High-Grade Pianos, showing natural color of wood. Fill in the coupon below and mail today and you will receive this beautiful book by return mail postpaid.

\$100 to \$200

By My Plan can be saved on a good piano by my direct way of selling. My terms of payment are the most liberal offered by any firm. I employ no agents to call and bother you. Be your own judge and— You May Select Your Own Terms.

Read These Letters:

I. S. Purcell, 339 S. Wabash Ave., Chicago

Dear Sir: We purchased Purcell Pianos for our School after careful examination of a number of different makes. The tone quality of the Purcell Pianos is especially good and the action is very responsive. The design and finish is all that could be desired. We use the Purcell Pianos exclusively and heartily recommend them to anyone desiring a first class piano.

Wishing you a continued success, I am

Very truly yours,

MENDELSSOHN CONSERVATORY OF MUSIC
Chicago, Ill.

I. S. Purcell, Chicago, Illinois

Dear Sir: The piano arrived last Tuesday, and am pleased to state that it surpasses my anticipation. It is rich in tone and satisfactory in every way. I requested several teachers and professionals to give me their opinion and they are unanimous in declaring it to be an excellent instrument.

Thanking you most sincerely for your kindness, I am

Respectfully,

SISTERS DE NOTRE DAME

Balanced Rations

Signs of the Times

"On a clear and frosty morning, when the snow is soft and white,
Ere the sun has wiped the dainty foot-prints out,
One can see the tracks of rabbits who went calling through the night
On their neighbors in the forest round about."
—F. J.

An object lesson—see the cartoon.

The tenant problem will be always with us.

Russia will have Turkey for Thanksgiving next year—perhaps.

Some farmers would rather have rheumatism than a new idea.

The motor truck may be thoroughly tired, yet it never becomes weary.

If it wasn't for the suckers, all the grafters would soon starve to death.

By the time we get over Thanksgiving we'll be ready for Christmas.

The knowledge we need may be easy to get, once we know where and how to get it.

The farmer who follows the line of least resistance quite naturally runs down hill.

Creamery owners and managers are organizing state associations. Good for them!

The fellow who is an expert at killing time never makes a killing at anything else.

Now let the ghost walk—if it is the community spirit. Yet some people are afraid of "ghosts."

There never was an improvement proposed but what some one said "It won't work." But it did.

There are just two classes of fools, those who believe everything and those who don't believe anything.

Throw out the rotten ears from the corn for market. The new system of grading will make it pay to do so.

Yes, surely, farmers can become master workmen. Given the desire, all the rest will be added in due season.

Whether or not farming is a business, or merely a means of existence, depends almost entirely on the man behind the plow.

America's apple crop amounts to 50,000,000 barrels. Great pie timber. Great evenings ahead, if the popcorn crop is equally good.

What pleaseth well the editor of this paper? A new subscriber. What maketh his heart glad? A renewal. Both are always welcome.

Big meetings in Omaha this month. Farmers are coming to the front. They feel a bit awkward in the spotlight at first, but they'll like it when used to it.

The farmer whose implements have only the blue sky for a shelter will have to make some changes in his farming operations before he will be able to obtain cheap credit.

"By their fruits ye shall know them." A really prosperous farming community will have good roads, good schools, a telephone system, and a wide-awake farmers' club. If you want all these, get the last first and the rest will follow quickly.

Try it Yourself

FEEDING OUTDOORS, AND WHAT OUR CARTOONIST THINKS OF IT

What Others Say and What We Think of It

"The man who offers you something for nothing is a fake."—California Farmer. So is the "something" he offers you.

"I believe in pie for old and young, at least one meal a day the year around."—Southern Farm Journal. That is a creed that suits us, unanimous.

"The highway of good roads legislation is too full of political chuck holes."—The Country Gentleman. Better run the steam roller over 'em a few times.

"Hard thinking always results in easier ways."—Co-operative Manager and Farmer. Yes, usually; but it depends somewhat on which way your thoughts run.

"Co-operation is neighborliness, brotherhood, fellowship and Christianity put to work."—The Progressive Farmer. A long sermon in one short sentence.

"The European war made so much noise we couldn't hear the opening of the Panama Canal."—Farm and Fireside. Never mind, it's only another case of "silence is golden."

"Too many farmers are prone to think that low yields and high prices are the most profitable."—The Price-Current Grain Reporter. Well, sir, are you prepared to say that larger production and low prices are the most profitable—to the farmer?

"Our great trouble has been that the railways have not tried often enough or hard enough to get their case before the public."—Railway Age Gazette. Surely this must refer to the days before the Interstate Commerce Commission reduced rates.

"Any institution that will bring the people of the country neighborhoods together to entertain and be entertained by each other is certainly worth while."—Southern Farm Journal. Wherefore the everlasting success and popularity of the Sunday school picnic.

"All good Americans should be thankful that they live in a land where the people decide their own destiny."—The National Farmer and Stockman. And if the good American people neglect to exercise their decisive powers, there's always obliging politicians on hand to do the deciding for them.

"Many a boy's nature has been soured against the farm by the discovery that, though he 'owns' a calf, a colt or a pig, the animal really belongs to his father when ready for market."—Farm and Fireside. In far too many cases the farmer, and not farming, is the cause of the boy leaving the farm.

"The high cost of living has been discussed from every point of view and there is only one conclusion that we can reach from the discussion, and that is the fact that the farmer is not to blame."—The Farmers Guide. Now, having found a starting point, it ought to be easy to find the real cause of the trouble, by process of elimination.

Size vs. Income

A CAREFUL STUDY of government experts in regard to the profits made by a large number of farmers in different parts of the United States shows that the size of the farm business is one of the most important factors controlling the farmer's income. The problem of how large an investment is needed in order to carry on a certain type of farming to advantage is of the utmost importance. The amount of this investment will vary according to the type of farming and to the region selected.

In a survey of over 100 farms in an irrigated district in Utah only three farm owners with less than \$10,000 total capital received a labor income of more than \$1,000 for their year's work.

By labor income is meant what remains of the net income after deducting 6 per cent for invested capital and working capital—in other words, what the farmer himself receives for his year's work and supervision.

In a group of thirty-five of these men, who had small farms an average capital of \$5,345, the average labor income was \$235. One out of every five received nothing for his labor and made less than 5 per cent in-

terest on his farm investment. With high-priced land this amount of capital gave him too small an area to utilize to advantage. If land were cheaper, so that a much larger area could be obtained with this same amount of money, then \$10,000 might be a sufficient investment to give the farmer a substantial income.

In the central states, where corn, wheat and oats are the prevailing crops, and where land is from \$150 to \$250 an acre, \$10,000 would be entirely too small an investment to yield the owner a good income, for the reason that forty to fifty acres, the total amount of land he could possibly buy with this amount of money, would not utilize his teams, machinery or labor to the fullest advantage.

On the other hand the number of acres is not always a true measure, as a big business can be conducted on a small area. Twenty acres of truck and small fruits may equal a 200-acre farm devoted to grain, hay, cattle and hogs. It is the type of farming that determines the number of acres necessary for efficient operation. Many persons have made the mistake of buying too high-priced land for successful general farming. In other words, they paid truck-farming prices for land which, on account of market relations, should be used only for grain and general farming.

EDITORIAL

Another Effect of Monopoly

THE ELEMENTS of fertility are an important matter in all farming countries. Even in comparatively new and unprecedently fertile America the farmers spend millions of dollars annually for fertilizers. The three most essential elements are nitrogen, potash and phosphorus. The atmosphere has an abundance of nitrogen, and it may be drawn therefrom and left in the soil by the peculiar growth and properties of leguminous plants. Potash is found in a more or less usable degree in ashes where the harder varieties of wood have been burned, but the lack of quantity and the rare opportunity to obtain such ashes make that source of supply entirely undependable. Other sources of potash have been discovered in this country and elsewhere, but they have never been sufficiently developed to make them available. The main source, therefore, is the various potash mines, the richest of which in all the world are in Germany, and to the German mines the world has looked largely for its supply. Of course the great war in which Germany is engaged has greatly disarranged business, and has, in fact, resulted in developments that are somewhat of a surprise to people in general. It seems that the German mine owners have not only monopolized the trade in potash, but that they have conspired to prevent the development of potash elsewhere. Hence every American farmer who has bought fertilizers of which potash was an element has contributed to this German monopoly in prices alarmingly exacting. We quote from a Washington City communica-

tion published recently in a leading farm paper of the United States:

The German potash monopoly is owned by a corporation as big and powerful as Standard Oil. Its profits and dividends have been enormous, and because of the small cost of mining the German deposits this monopoly has been able to fix potash prices for the world, and prevent competition. This monopoly has agencies throughout the world, and sells either to fertilizer manufacturers or direct to consumers. The average price it has been charging has been about \$40 a ton. So, when American business men have proposed manufacturing potash from the native rocks or from seaweed, the German monopoly has served notice on them that if they started anything like competition the monopoly would reduce the price to cost if necessary, and ruin them. And because the cost of making potash from either kelp or feldspar is higher than the cost of mining and importing the German salts, the monopoly has been able to prevent any production of potash in this country, and has collected a price from American manufacturers and farmers that has yielded the German monopolists profits of something like 700 or 800 per cent.

The above is no criticism of the German government. It is merely an illustration of "big business," and shows how easy it is to victimize the unorganized masses who till the soil. If the war so terribly to be deplored impairs the power of this unscrupulous monopoly, it will have been beneficial to that extent at least. No doubt sources of potash will now be developed in the United States. Phosphorus is found in this country in wonderful beds of animal bones in Florida and, we believe, elsewhere, and in grinding phosphate rocks mined in various portions of the country. But the phosphate supply is by no means excessive. It therefore behooves farmers to maintain the fertility of their soil in every possible natural way.

Farmers and Bankers

FARMERS create wealth, and after the wealth so created is converted into money bankers accept it on deposit and loan it to those who need it, on what is understood to be safe security and at a charge for the use of it to pay the banker for the service. That interest rate does not go to those who created the wealth and to whom the money belongs.

The farmers are essential to the existence of the human race, and practically all business is founded upon what they do. The bankers merely serve as a business convenience; they do not create anything, nor do they add anything to the world's wealth or progress. They are simply a go-between, with one hand extended to those who have more money than they wish to use and the other to those who need money badly enough to pay the banker for its use. We repeat, the bank is nothing more than a business convenience.

But one of our daily exchanges, a prominent party paper, by the way, has discovered what it admits to be a new use for bankers. It is that the banker is called upon to interest himself in the affairs of the farmer. It is not assumed that the banker knows more about farming than the farmer, but he is to teach the farmer, at the solicitation of the National Implement and Vehicle Association, "to diversify his crops, especially in the South; to advocate seed selection and intensive cultivation; to encourage stock raising

in order to preserve soil fertility; and to create a demand among farmers for the early opening of federal reserve banks." On this subject the same paper tells us the Farm Mortgage Bankers' Association of America recently adopted resolutions pledging co-operation with Congress in legislation on rural credits. The interests behind these things will show themselves if looked for with any degree of care. These institutions would be glad if they had a better means of getting control of the homes of the people.

But first of all, the new use thus found for the bankers is "to discourage farmers from speculating on future grain prices!" Farmers do not speculate on future grain prices, and never did. They do not buy to sell again. They are learning, however, to make their own prices as everybody else does. The method is simple, and can not interfere even with the bankers' business, nor with that of the implement makers. It is merely to agree on a price and refuse to sell until that price is offered. The implement and other manufacturers do that, and so do the bankers as to their rates. It leads to a more extended and persistent search for demand and a better supply of the needs of the people—cuts out excessive charges for distribution, and actually gives consumers cheaper supplies. But those who grab their profits without earning them may be expected to create all sorts of devices to hinder this true agricultural advancement.

The Land Problem in America

WHY IS IT that there there are serfs in Russia and peasants in almost all the other countries of the old world? It is because the few own the land and the masses must live upon it on the owners' terms. It has long been

taught even to our school children that the great trouble with the common people in Ireland is that the land is owned and inherited by the lords and nobility and there is no chance for the lower class, the common people, to own enough for a burying place. The result is that the working farmers in

Ireland have the scantiest of homes, and often are compelled to take the smaller of their domestic animals into their homes with them. This is not an inherent quality of the Irish people, for they do not do so when they come to America, where people have more room. Some of our best citizens and most successful farmers are Irish, and some of our most beautiful homes are owned by people that originally came from Ireland.

But there is no danger of anything of that kind in the United States, is there? Think a moment. We may have in store some surprises for you. A monopolistic few own and control our great business interests, don't they? Transportation, telegraph and telephone, mining largely, and also manufacturing; buying and selling farm products and also selling farm necessities, as well as the actual necessities of all the people—these are not sold as supplies in an open market, but in a market controlled by the few that own them, and to make their control more absolute each class combines with every other and thus deals with the users and consumers as the Russians do with the serfs and the lords with the peasants.

But, you say, that does not apply to land in America. Hold on. There are now a great many tenant farmers in this country, aren't there? And the number is increasing every year. But, you say again, families multiply, people increase, but the land remains the same. Very true, but we have some surprises as to the ownership of Amer-

ican land. It is asserted and not contradicted that one-seventh of all the land in California is possessed by two ownerships, and that three men own 4,200,000 acres of the land of Florida! A witness recently testified before a House committee that one man owned 3,000,000 acres in Texas. Now think of the inordinate tracts owned by individuals, corporations and companies elsewhere, and there is a problem presented even in America. We have no reference to farm workers who own large farms, but to those who accumulate lands as a means of power, of getting wealth, of making those who have no land, but need homes, subservient to them.

It is but a step from this question to the much-discussed proposition of rural or farm loans. The money is annually gathered in by the wealth absorbers of the country, and when they put it again in circulation they wish to tie it to the only permanent wealth there is, the land, the farms and homes of the people. One-third of the farms of the country, so it is said, are mortgaged now, but those mortgages are only individual security for the money loaned, and are not in good shape to be made instruments of speculation. It is now proposed to group them in various ways and make them bond liens to go on the market, and in the end become absorbents of the land titles. We want farmers to have every opportunity, every consideration, true equity in all things, but we want the land titles of the United States protected, and the land held for the homes of our people.

The Lesson of the Election

PEOPLE with the governing power as have the people of the United States ought to learn something from every general election. It is not so much a question as to who is elected or what political party prevails as it is whether those have been chosen who will most surely succeed in giving the people good government—government that will be to all alike and on the best and most equitable basis of human progress.

The recent election, as have many that have preceded it, proves that what for lack of a better name is called Big Business dominates politics as well as it does common affairs. Questions adversely affecting monopolistic tendencies are never allowed to go by default. Any proposition to take business from the control of the few and restore it to the many who may be engaged in it immediately attracts the attention of the few at the head of Big Business, and it is no trouble for those so engaged to unite in opposition to it whether it affects their immediate line or not. There is a great lesson here for the farmers if they would only see it.

It is also clear that the political parties are dominated by the managers at the top rather than controlled by the masses of the people that do the voting. These bosses set the stakes and the people work to them. The party press is at their beck and call, and works out the plans that come from headquarters. Well, we must agree that that is the only way to succeed, but it often places party papers in an awkward situation, and compels the advocacy of things known to be false and not for the best. The result is that whatever the party favors, the papers of that party support, and whatever the other party or parties indorse the papers of the opposite party oppose. It is not a question as to whether it is good or bad. This is a party extreme which does not make for good government.

A distinctive lesson taught by the recent election is that primary elections cost double what they otherwise, though they make the choice of wise would, are no guarantee that the

best candidates will be given a place on the final ticket. In several well-known cases men were chosen in the primaries who could not have been nominated in representative convention. We regret to say it, but it seems quite apparent that primaries are more easily dominated by schemers, boodlers and bums than are well-ordered conventions. One reason is that busy people, those less easy to control, neglect the primaries, and the independent element of the country has neither moral nor legal right to vote in them.

We note in the recent election, however, an element of independence that is unmistakable. Objectionable candidates that carried primaries overwhelmingly were defeated at the polls, and it is seldom that different candidates on any ticket carried the same party vote, or were elected or defeated by like majorities. This is an encouraging proof that the people voted to an extent at least as they pleased, and it is the best possible guarantee that in future the best candidates will be placed on the tickets and the best officers chosen.

Good Roads and Land Values—The Office of Public Roads has been making extensive studies of the results to the farmers adjoining the improved roads. In nearly every instance the increase in the salable values of the land adjoining has been surprising. Good roads have proven an incentive to rural school consolidation, and by promoting better attendance have improved the schools.

Successful Farming—The office of information, United States Department of Agriculture, recently declared that "from a business standpoint no farm is successful that does not pay interest on total investment, depreciation on equipment, and wages for all labor performed on the farm." This is sound argument, and if any farmer thinks he is a success as a farmer and a business man, let him use the figures of his income in connection with the money value of his farm and its equipment to ascertain if he is making wages on his labor and interest on his money. Such figuring, we opine, would prove a revelation to many of our farmers.

December First Feature Article

Good Roads as Crop Producers

THAT AN improved road will increase vastly the productivity of the area through which it runs has now been satisfactorily demonstrated in Virginia by the United States Department of Agriculture. Conditions in Spotsylvania county were investigated with particular care and the results have proved surprising. In 1909 the county voted \$100,000 to improve 40 miles of roads. Two years after the completion of this work the railroad took away in 12 months from Fredericksburg, the county seat, 71,000 tons of agricultural and forest products hauled over the highways to that town. Before the improvement of the roads this total was only 49,000 tons annually; in other words, the quantity of the county's produce had risen more than 45 per cent. Still more interesting, however, is the increase shown in the quantity of the dairy products. In 1909 these amounted to 114,815 pounds, in 1911 to 273,028 pounds, an increase of practically 140 per cent in two years. In the same time shipments of wheat had increased 59 per cent, tobacco, 31 per cent and lumber and other forest products, 48 per cent.

In addition to this increase in quantity the cost of hauling each ton of produce was materially reduced. In other words the farmers not only produce more but produce more cheaply, for the cost of transportation to market is of course an important factor in the cost of production. From this point of view it is estimated that the \$100,000 spent in improving the roads in Spotsylvania county saved the farmers of that county \$41,000 a year, on the following basis.

Before the roads were improved it was estimated that the average cost of hauling was 20 cents a "ton mile;" after the improvement this fell to 12 cents a "ton mile," or a saving of 8 cents. A saving of 8 cents per mile on 520,000 "ton miles" is \$41,000 a year. The county's investment of \$100,000 in other words returns a dividend of 40 per cent annually.

Because this saving, in cases of this character, does not take the form of cash put directly into the farmers' pocket there is a widespread tendency to believe that it is fictitious profit, while as a matter of fact it is just as real a source of profit as the increase in the price of wheat.

In Dinwiddie county, Virginia, for example, where peanuts is one of the staple crops, the average load for two mules on a main road was about 1,000 pounds before the road was improved. After its improvement the average load was found to be 2,000 pounds and the time consumed in hauling the larger load to market was much reduced. In other words, one man with a wagon and two mules could do more than twice as much work with the improved road than with the unimproved road. This is the explanation of the extraordinary rise in the total output of agricultural products in a country with a good road system.

The road drag is the simplest and least expensive contrivance yet devised for maintaining earth roads. Properly used, the drag gives the needed crown to the road, smooths out ruts and other irregularities, spreads out puddles of water, thereby accelerating the drying of the road, and makes the surface more or less impervious to water. It is safe to say that it is less expensive than any other efficient system of upkeep.

Of more than 2,000,000 miles of public roads in the United States, only about 200,000 miles have been given a hard surface. It is true, of course, that on roads that are entirely unimproved, the drag is practically useless. There is a large mileage, however, that has been partially improved, and it is on roads of this character that the use of the drag is advocated.

In its simplest form, the road drag

SUBSCRIBER W. C. RAMEY, HATFIELD, MO.—A GOOD ROADS ADVOCATE.

consists of an ordinary log split in half and the two halves connected like the uprights of a ladder by means of cross sticks or rungs set in. The log should be about 7 or 8 inches in diameter, and from 6 to 8 feet in length. It is better to have it well-seasoned, hard, tough wood. The two half-round halves of the log form the drag and are usually spaced from 30 to 36 inches apart. The front log is always placed with the split surface of the wood facing forward, but the rear sometimes has its rounded face to the front. This is done in order to increase the smearing action of the drag as it passes over the surface of the road.

The two runners are not placed directly behind each other, but are "offset," as it is called, from 12 to 16 inches. This is done because the drag

is drawn over the road at an angle sufficiently to make the runners free themselves of the material which they scrape. The amount of this angle or "skew" depends, of course, upon the condition of the road. By "offsetting" the runners it is possible to make their ends follow approximately the same line on the road, which they would not do if they were set directly behind each other and the drag drawn at an angle with the road.

In order to provide standing room for the man, it is usual to nail two boards down upon the rungs parallel to the runners. Standing upon these a skillful driver will bear his weight in such a way as to aid materially in the successful operation of the drag.

The drag is drawn by a chain which should be about 8 feet long. This can

be fastened by eye-bolts to each end of the front runner, or one end of the chain can pass through a hole at the discharge end of the front runner, and the other end be looped over the rung at the cutting end of the runner. It is important that the hitching link should be so designed that its position can be changed readily. It is also desirable to provide a metal cutting edge for the front runner. This can be made from a strip of iron or steel, and old wagon tires have frequently proven satisfactory.

The cost of such a drag varies from \$2.00 to perhaps \$10.00 or \$12.00. This practically insignificant outlay will secure an implement that will be of great service to the community for at least three or four years. The fact cannot be overlooked, however, that skill in the use of the drag is indispensable.

The angle that the runners make with the center line of the road, the skew angle, it might be called, is an important factor. For example, if the dragging is done to increase the crown of the road, the drag should be sufficiently skewed to discharge all material as rapidly as it is collected on the runners. On the other hand, the conditions may be such that it is desirable to carry along this material in order to deposit it where there are depressions in the road's surface. An intelligent operator will soon learn many ways of controlling the action of the drag. The length of the hitching chain, the disposition of the operator's weight, the time when the dragging is done, all these exert a marked influence on the result.

As to the time for dragging, a safe rule to follow is to drag the road when the material composing the surface contains sufficient moisture to compact readily, but is not sufficiently wet for traffic to produce mud.

Since the weather plays so important a part, it is not usually possible to arrange continuous employment for teams on the road. It is therefore, desirable, whenever possible, to have the dragging done by persons interested in the road, who will do it in the intervals of other occupations.

In planning the highway system or the main market roads it will be found necessary to omit many roads the improvement of which is greatly desired by abutting land owners. The fact that such property holders must pay a tax for the bond issue is only an apparent injustice, for if the highway system is well planned the entire county will feel the benefits of the improvement. As a rule, main market roads reach the majority of producing areas, and when they are improved all land values tend to increase.

The improvement of market roads results in improved marketing conditions which benefit the city. Most cities are essentially dependent upon the surrounding country for their prosperity and development. The development of suburban property for residence purposes is also dependent upon highway conditions and it is becoming evident yearly that whatever makes for an increase in rural population must be encouraged. Since the introduction of motor traffic, country highways are used to an increasing extent by city residents. In fact, the cost of maintaining many country highways has been greatly increased by the presence of city-owned motor vehicles. The general advance in facilities for doing country business from town headquarters when roads are improved is no inconsiderable factor in the commercial life of the community.

THE FARM *and* ITS PROBLEMS

of Producing and Marketing

Better Crops and How to Get Them

EACH YEAR brings better proof that the farmer or fruit grower who sprays increases the value and size of his crops over those he formerly received. Orchards that have been neglected for years have shown wonderful results after they have been sprayed for only one or two seasons. It has also been proven that field crops, such as potatoes, cabbage, etc., which are always more or less subject to damage by insects and plant diseases, have in many cases been more than doubled when they have been properly protected by spraying.

The fact that, after thorough investigation, every agricultural college and experiment station in the country recommends spraying is ample proof that it pays.

Conditions That Affect Your Crops

Assuming that care has been used in selecting the seed or plants, there are three general conditions that will affect the yield and quality of your crop:

The soil must contain the elements necessary to produce the crop.

The soil must be so prepared and cultivated that it will retain the right amount of moisture.

The growing crops must be free from disease and the attacks of insect pests and weeds.

Up until recent years the farmer's chief efforts have been given to the first two requirements. Crop rotation,

branch and spray down, doing one side of the tree at a time. Should a breeze be blowing take advantage of the same and spray but one side of the tree, going up one row and down another. Do not attempt to spray when a strong wind is blowing. Neither can spraying be successfully done in very cold or freezing weather.

If but one spraying can be given it would be better to do this in early spring before the buds start. Spray all of the tree down to the ground, and do not neglect the trunk, as many do under the mistaken idea that only the limbs and twigs require spraying.

If I Were a Farmer

By Mr. Town D. Weller

IF I WERE A FARMER I'd bring up my boys and girls to follow the farm for a living. Of course, this sounds pretty positive, especially in the light of the fact that boys and girls are crowding to the cities almost as fast as the farm can raise them and get them ready to go. But my boys and my girls would stay on the farm. Of this I'm certain.

It wasn't so many years ago but that I can remember how things appealed to me when I was a boy. I was always interested in anything that offered to get me a little money for my own spending, and consequently hoeing in the garden with no compensation but sunburn on the back of my neck wasn't very interesting. A boy has a natural desire for ownership. It doesn't make much difference what it is he possesses so long as he can call it his own. It may be only a collection of tin tobacco tags or cigar box covers, but so long as it belongs to him he's happy. Now I figure that the way to get a boy interested in the farm is to appeal to his sense of ownership.

Let him see that he is going to get something out of what he is doing. When he gets old enough to go into the field give him an interest in the crop. He'll work all the better and it will be worth something to you to keep his mind centered on the farm instead of roving cityward in anticipation of the time he can be his own boss and earn his own pay envelope.

It's the strangest thing in the world how short-sighted some men are, and I really believe that some farmers' sight doesn't get any farther than the end of their nose when it comes to trying to interest the rising generation in the farm. They can't seem to see how much easier it is for the boy on the farm these days to break away and get into the city. That's why so many are doing it. And the city appears to offer such a field for getting rich quickly. The only way I can see to offset these conditions is to take the boys and girls into partnership just as early as possible and prove to them that farming is a good thing.

I may be a very impractical city man, but I believe I could keep my children on the farm in this way. I would make them sharers in the profits of the undertaking and not mere apprentices who have to serve out their time before they can become their own masters.

Practical Results from Fall-Plowed Ground

THROUGHOUT our section of the country it is an unusual sight to find a field fall-plowed for the coming year's crop. In fact, I had never heard of such a happening, myself, until a few years ago, when I read of it in a farm paper. Later I experimented with the matter, and now I am convinced that fall-plowed ground will produce a far more generous crop than spring plowing.

There are other reasons why the

ground should be worked in the fall: First, fall-plowed soil will conserve the moisture, saving up two years' rainfall for one crop. The last three summer seasons have been extremely dry in this section of the country, and moisture has been a much-needed element. Second, as a means of ridding the soil of grub-worms and obnoxious insects that infest the soil, fall-plowing is a reliable factor. The ground should be plowed late enough just to overturn the homes of the insects when they are safely settled for the winter, and they will not have time to burrow themselves deep enough before the freezing weather comes to insure their safety. Third, when the soil is turned over in the fall, it tends to quickly decay any manure or vegetation that happens to be upon it, and the freezing and thawing of the up-turned ground is of great physical benefit to the soil itself.

Last year I fall-plowed a five-acre tract of ground. In the spring I re-broke it, cutting nine inches deep each time, and this spring it was planted to corn. We have had an extremely dry season here, but I raised number one corn on this tract. My other corn was a complete failure, and will not even make any forage to speak of.

Every time, I advocate fall-plowed ground. Even the gardens and truck patches should be fall-worked, which will permit of earlier planting than usual next spring.—H. H. Smith, McLeansboro, Ill.

Swat the Chinch Bug

According to the United States Department of Agriculture, the chinch bug is most effectively destroyed in winter quarters. Burn the dry grass, stubble, leaves and rubbish along the fence rows, woods, and wherever it occurs to furnish shelter for the insect. Do this before cold weather begins in real earnest. Exposure to cold will eradicate the pests. If grass remains green it should be pastured.

It is most advisable to get rid of the chinch bugs before they enter the young wheat in early spring. Once there they can not be easily exterminated. Most of the bugs spend the winter in thick bunches of clump-forming grasses in waste places, pastures and meadows, along roadsides, hedge rows and railroad rights of way. Burning may kill them, and what are not destroyed by fire will be frozen to death if their protection is taken away.

Fighting the chinch bug should be a neighborhood affair, another instance where co-operative effort pays.

Anything but Modern

He—I like handy, simple things the best. She—Just like you. I see you are never satisfied with anything that's in use now-a-days.

What It Is to Produce

He—Are you willing to share my lot, Julia, dear? Julia—That depends upon what has been planted on it. Have you sown much wild oats?

That's the Only Chance

Mr. Sadly—It really seems to be true that the good die young. Mr. Badly—Of course. If they die at all they must die young, for when they get old they are not good.

The Proof

"Now, Sambo, tell me the truth. Are you honest? I can't hire you unless you are."

Sambo—I guess I shore is, boss. I've been took up three times for stealin' and they never did prove it on me.

Effect of Neutrality

"How did those boys get into the fight?" "Jim and Tom were fighting and the other boys were neutral, and they had to fight to keep each other neutral."

Saw a Difference

Judge—The law presumes you are innocent until you are proven guilty.

Prisoner—My goodness! The state's attorney don't know much law, then, does he, judge?

fertilizers and manure are used to enrich the soil, and care is always given to keep the growing crops cultivated. In crops that permit it, cultivation serves the double purpose of keeping the moisture in the soil and preventing dangerous growths of weeds.

Attention to the matter of protecting crops from disease and insects has not been so generally given. In increasing the crop yield, however, as much can be accomplished by proper treatment for disease and insect pests as by proper fertilization and cultivation.

The spraying season for the crop of 1915 may begin now. The winter treatment would be intended to clear the trees of scale insects. Trees must be dormant, and should be thoroughly pruned of all dead wood before spraying. Use the concentrated lime sulphur, one part of manufactured solution to ten parts of water. Do not spray immediately after a rain or while the trees are still wet, and try not to spray just preceding a rain. The spray should be thoroughly dry on the trees before a rain comes, giving it a chance to adhere to the bark thoroughly. An ideal spray day is a bright, quiet one when the air is dry and cool. Spray thoroughly. There is a wonderful amount of spray material and time and labor and money wasted because people neglect thoroughness. I doubt if one-tenth of the people who spray do so correctly. Begin at the topmost

A Guarantee that Protects

UP-TO-DATE's guarantee of advertisers has stood between our readers and loss for years—ever since the paper was established. It makes it safe for you to buy from our advertisers. We want you to put your trust in our guarantee and have faith in our advertisers.

It pays to trade with our advertisers through your dealer or direct.

Our Advertisers Are Guaranteed

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

The Next Time You See THIS in Your Hog-Lot Send for THIS

SEND NO MONEY

When your hogs rub against fence posts, buildings, trees, etc., look out for lice. It's a pretty good sign these blood-sucking parasites are at work in your herd. If neglected they will multiply by the thousands—soon infest the whole herd—keep your animals thin—stunt their growth—sap their vitality and invite cholera and other contagious diseases on to your farm. Dips are helpful but expensive—often dangerous and always troublesome. Why not let your hogs rid themselves of lice, mange and other skin diseases in the natural way. Let them rub against a *Rowe New Idea Rubbing Post* 30 days at my risk. I'll furnish the Posts and the Oil and pay the freight. The trial won't cost you a cent. You simply watch results and pay if pleased.

Rowe's New Idea Rubbing Posts

are simpler, safer, more durable and more economical than any other—use any kind of oil, crude or medicated. Have no valves, nothing to get out of order, work in all kinds of weather the year round. Dirt can't clog them as it does valve and cylinder machines. Rain can't wash out oil. No oil wasted. Every drop is applied as needed right on the itch when the hog rubs. Pigs of all sizes and ages can rub on these posts and keep vermin-free and healthy. Three rubbing bars to each Post. One Post accommodates 30 hogs.

Try Them 30 Days FREE—Pay if Pleased

Just write and tell me how many Posts you want to try 30 days at my risk. I'll furnish the Machines, Oil, everything and even pay the freight to prove my claims. Send no money. Order direct from this advertisement or if you prefer write for big illustrated folder today.

Our Country Contributors

NOTICE TO READERS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used as follows: \$3.00 for the best articles \$2.00 for the second, and \$1.00 for the third best. All others, 50 cents each.

A Hired Man's Story

(Awarded First Prize of \$3)

I WAS 29 years of age when the turning point came in my life. I had worked as a farm hand both by the day and month and had spent several winters working in the woods and at other odd jobs. I had been born and raised on a farm, had a liking to farm work and after working here and there as mentioned I realized more than ever the possibilities in agriculture. It was about 1890 when I invested the wages that I had saved since becoming my own boss in about 100 acres of land. The next year I found a "cook" and we formed a partnership for life. We lived that summer in a vacant house located about a quarter of a mile from my farm. But little of our land was cleared of the brush.

During the winter after we were married we secured a position cooking in the woods for a lumbering crew of from twenty-five to thirty men. Wife did the cooking and I was the flunkey. When spring came we landed back on our little farm with something like \$200 in money. After the spring work was finished we built a house with what we had earned during the preceding winter. We were now full-fledged farmers, having twelve chickens, two cows, several pigs and two horses. The pigs yielded the best results, and a few years later we specialized in hogs, keeping at times as high as forty at once. But this was the time of cheap pork, the average price being from 2 to 5 cents a pound. The very best we ever got was 5 cents, and then we thought we had a bonanza. The chickens and cows did well, but at this time both eggs and butter were cheap, so that our profit was very small. Our field crops consisted of hay, oats, wheat, corn and potatoes.

A few years later I felt that I could use more land to good advantage, so I made an eighty-acre addition to what already was mine.

The old straw sheds were getting poor about this time, and as we kept more stock than formerly we needed extra room, so they were replaced with a large barn for both hay and cattle. The barn served its purpose well until 1912, when it was too small for the number of stock I then had. It was remodeled into a basement building nearly 50 by 50 feet.

On account of the dry weather during the last several seasons we had a shortage of pasture for our milch cows. This last summer I built a solid concrete silo 12 feet in diameter and about 35 feet high.

My barn is now equipped with a litter carrier. I have all the necessary farm machinery. Uncle Sam brings my mail each day. Have a telephone installed in the house and have been my own boss ever since I first bought the farm in 1890, and that certainly has been worth a whole lot.—J. A., Wisconsin.

Community Co-operation Needed

(Awarded Second Prize of \$2)

WHILE on a trip west in 1912 I was greatly impressed with the way the farmers were organized and marketed their products. A thought came to me that this was what was needed in our own community, where hundreds of bushels

of apples were rotting in the orchards and no sale for them, while at different places I visited apples were selling at from 5 cents to eight cents per pound and not enough to supply the demand.

When I came home I talked organization to some of the farmers. They seemed to be favorably impressed with the idea, but no one takes hold to do anything. What is needed most is a leader, one who will make things go, for without a leader not much can be accomplished.

This has been a remarkably good year for the farmers here as for bountiful crops, but without co-operation and organization they never can hope to be successful.

I remember reading in UP-TO-DATE FARMING twelve years or more ago that the Farmers Society of Equity was being agitated. I did not think then that organization was needed, but I see now that it takes some of us so long to awaken to what is for the best, but seeing thousands of bushels of fine fruit going to waste, while so many people are in need of it and the farmers need the money, as has been the case this year, we realize we have been sleeping and should be awakened.

Give us good organized societies and hearty co-operation, together with good

roads to market our products, and we can give our boys and girls an agricultural education so that when they take our place they will be better prepared to do their task than we of today.—Alice Martin, Elkins, W. Va.

The Daughter on the Farm

(Awarded Third Prize of \$1)

BLESSED above all others is the lot of the daughter on the farm. Yet too often she fails to appreciate her blessings and make use of her opportunities.

The ambitious farm girl is apt to think her talent is wasted in the country and long to try her wings in the city. This is a great mistake. No life can be more deadening or monotonous than that of the thousands of working girls in our large cities. Living in chilly hall bedrooms, underfed, underpaid, with no social life, they eke out a mere existence. In her home community the farm girl is an honored member of society with her own niche to fill in the family, social and church life. In the city she is only a drop in the bucket, friendless and alone.

She looks with envy on the wages paid the working girl in the city. This

is only a fallacy. Owing to the high cost of living, in too many cases the wages are insufficient for decent living.

The farm girl is monarch of all she surveys. The farm affords her not only countless opportunities for beauty, pleasure and health, but for money making also. Bee keeping, raising thoroughbred poultry, cultivating flowers and vegetables, making first-class preserves and jellies, canning fruit and vegetables, marketing farm products by parcel post, are all money-making vocations for the farm girl. Let her take pride in her work. Let her make her poultry prize winners, her flowers first-class, her jellies the very best. Then, instead of being a mere cog in a machine, as is her sister in the city, she will have that pride and joy that comes to those who create.—Miss Miriam Shafer, Cogan Station, Pa.

A Community Success

OURS is a one-crop country, and that crop is cotton. Consequently our farmers for the most part only have a money income about three months in the year, and often not much money then. In the winter of 1909 a few studious men began work on the problem of inducing the farmers to take up some other line of farming in addition to cotton, with a view to having a longer marketing season and not have all the eggs in one basket.

After much deliberation and discussion it was decided to attempt to foster a co-operative movement for vegetable growing. A leader was selected to make a house-to-house canvass of the community, and secure a list of all the farmers who would agree to plant vegetables, and the acreage each would devote to this work; also the kind of vegetables to be grown. This leader took figures with him to show how by growing in large quantities, ready markets could be found, transportation costs lessened, and a cannery could be built to take care of the products which could not be sold profitably in the fresh state.

The plan worked out successfully. A good acreage was planted to beans, peas, beets, sweet potatoes, sweet corn, cantaloupes, watermelons and tomatoes. These were shipped by the co-operative plan. An expert was employed to show how to sort, grade and pack for best results. The culls were canned, and when late in the season the markets were dull, all the remainder of the vegetables suitable for canning were canned.

The result was that farmers made money on shipping early vegetables, had canned goods for sale at any time, and had a supply of canned goods for home use, which saved much on grocery bills. Cotton, after all, is not the only money crop for the south.—Maggie Wilson, Pauls Valley, Oklahoma.

The Inquiring Mind

Willie (to papa, who was busy reading the paper)—Papa, do they get whalebone out of whales?

Papa—Yes, my son.
A moment more of thought, and then: "Papa, if we were in Cork would we be Corkers?"

No answer.
Another spell of thinking.
"Papa, are boys that shoot crackers cracker-jacks?"

Still no answer, and, discouraged, Willie turned to his mother:

"Ma, women used to wear hoops, didn't they?"

"Yes, my son."

"Were they like the war whoops the Indian squaws used to have?"

Papa almost yelled: "Willie, it is time for you to go to bed!"

With a discouraged look Willie started, but just as he went through the door he turned and asked hopefully: "Is this house built on sleepers so we can sleep in it?"

To Escape the Aftermath

"Why did your uncle marry the widow of a man who died in the penitentiary?"
"He thought she wouldn't throw up her former husband to him."

The Cost of a Telephone Call

DID you ever think how much it costs to give you the telephone right-of-way anywhere, at all times?

Your telephone instrument, which consists of 130 different parts, is only the entrance way to your share of the vast equipment necessary in making a call.

Your line is connected with the great Bell highways, reaching every state in the union—with its poles, copper wire, cross arms and insulators in the country; its underground conduits, manholes, cable vaults and cables in the cities.

You have the use of switchboards costing upwards of \$100,000,000. You enjoy the benefits of countless inventions which make possible universal telephone talk.

Your service is safeguarded by large forces of men building, testing and repairing lines. You command at all times the prompt attention of one or more operators.

How can such a costly service be provided at rates so low that all can afford it?

Only by its use upon a share-and-share-alike basis by millions of subscribers, and by the most careful economy in construction and operation. A plant so vast gives opportunity for ruinous extravagance; and judicious economy is as essential to its success as is the co-operative use of the facilities provided.

That the Bell System combines the maximum of usefulness and economy is proved by the fact that in no other land and under no other management has the telephone become such a servant of the masses.

LIVE STOCK and DAIRY

Producing and Marketing

Factors in Cattle Feeding

FROM four-fifths to nine-tenths of the beef cattle marketed from the corn belt are cattle that were not raised on the farms where they were fattened, nor in the same locality, but were purchased as stockers or feeders. Fattening cattle has passed largely from the hands of the general farmers to those of professional cattle feeders.

In not a few instances the cattle feeders who made a specialty of the business have abandoned it on account of the high cost of feeders, high price of grain, high price of land, and the uncertainty of the price of cattle.

The undeveloped state of beef cattle

production in proportion to population and area justifies the expectation of an ultimate extension and development of cattle raising and feeding, and when the cattle raising and feeding farmers learn that beef production is a business much the same as the manufacture of boots and shoes—i. e., that the profit depends as much on adjusting the supply to the demand at a profit to the producer, and get together to put the business on a business basis, the extension and development of the cattle raising and feeding industry will advance fully equal to the demands that may be put upon it.

Corn-fed beef cattle will doubtless continue in demand by a class of trade in which the grass beef of the western ranges can not compete. The grazing lands of the west may be expected to furnish a partial supply of stockers and feeders to the corn belt for many years to come. However, an increasing proportion and eventually a large proportion of the cattle to be finished in the corn belt must be reared there.

Improved farming methods, the introduction of silage, the more complete utilization of roughage and increased attention to manure as a means to maintain soil fertility will do much to increase the number of beef cattle produced in the corn belt.

railroad journey is bound to prove trying on your animals and your disappointment will be great when you get your returns and realize the extent of your shrink. The blame for this is with the shipper wholly—is something the commission house can not avoid unless the shipper weighs his stock up light before loading. In loading stock into cars it is always well to exercise care in the distribution of the various kinds of animals throughout the floor space of the car. Build a good and substantial partition between each class of stock, being careful that your partitions are such that hogs will not be permitted to get under cattle—a frequent cause of the death of a hog or two in transit. Also see that all bulls in cars are securely tied so that the chance of injury to other cattle in the car is reduced to a minimum. We would also caution shippers not to be abusive to animals when unloading them from wagons or into cars. A great many animals are constantly arriving at the various stock yards which show evidence of inhuman treatment. Oftentimes this affects their selling price and it should always be borne in mind that a dumb animal is quite as sensitive to pain as a human being.

4. It permits a larger use of good starter.

There are also other advantages not to be overlooked. Thick cream leaves more skimmed milk on the farm for feeding purposes, and it costs less for transportation.

This is a subject the patrons and managers of creameries should give most considerate attention.

Mention Up-to-Date Farming

Thin Cream or Thick

ACCORDING to the testimony of Professor J. D. Jarvis, dairy expert, thin cream is chiefly responsible for the abnormal loss of butter fat, and the low quality of butter, hence the low prices paid to their patrons by many creameries. Where whole milk is delivered to the creamery there is not such loss, because it is skimmed closely by the separators at the creamery, giving a thick-bodied cream. But the farmer found it desirable to use the hand separator at home, and sending only the cream to the creamery, and not realizing the value of skimming a heavy cream they have negotiated a loss by taking a thin cream from the milk.

Heavy cream means more and better butter, for four reasons:

1. It does not sour as quickly as thin cream.
2. Being smaller in volume, it can be given better care and is more readily handled.
3. It can be pasteurized with less loss of butter fat in the buttermilk.

Don't Neglect the Pigs

IT IS too often the case that any place that will keep him within bounds is thought good enough for the pig. His habit of rooting tends to keep alive the idea that it is not necessary to be particular about the cleanliness of the pig's living room. This is bad for the animal's favorable growth and bad for the owner's profits. Clean, wholesome house room is as desirable for pigs as for any other animals. The best results in raising them can be obtained only by the exercise of alert carefulness. Because they are hardy they are apt to be neglected. The owner should watch daily to see if they eat with a relish. Their condition should be observed to note if the hair looks smooth and bright, and if they are free from vermin. The pens should frequently be cleaned and disinfected.

To keep the digestion good they ought to have some charcoal. The best is made from burning corn cobs. For this purpose use may be made of a pit like a cistern, about six feet in diameter and about the same depth, laid up in stone. Start a fire at the bottom and fill with corn cobs, and as it comes to a bright glow add more cobs until the pit is full. Then pour in salt water in which some powdered copperas has been dissolved and cover the pit as nearly airtight as possible. The result will be the best kind of charcoal which the pigs will relish.—J. W. B.

Shipping Live Stock

By an Old Commission Man

AS TO SHIPPING LIVE STOCK much can be said, and one of the first things to be impressed upon the readers of this publication is that you are assured of a square deal, no matter whom you ship to. The modern commission house is organized along business lines, and all firms are under heavy bonds to make prompt and truthful returns, and while a trifle more care is perhaps demanded in the sale of the various classes of live stock—that is, each man's stuff must be sold separately—we have yet to learn of a commission firm that has failed or refused to give each individual consignment the attention it merits.

Much, or too much rather, can not be said about the preparation of your shipments prior to marketing. It is a fallacy to start your stock out with a heavy fill, for the long and trying

Built Up To A High Standard Not Down To A Price

The New Galloway SANITARY Cream Separator

Is made so good in my factory that I will send it anywhere in the United States without an expert to set it up, to any inexperienced user for a 90-day free trial, to test against any make or kind, that even sells for twice as much and let the user be the judge. It's the most modern, the most sanitary, the most scientific, the cleanest skimmer, the most beautiful in design of any cream separator made today and I have seen them all.

Travel 20,000 Miles

look over every factory in the United States and all the foreign countries—you won't find its superior at any price. Made in our own factory from the finest material, on the best automatic machinery, by skilled workmen, in tremendous quantities, all parts alike, interchangeable and standard, and sold to you for less money than dealers and jobbers can buy machines not as good in carload lots for spot cash.

Get My 1915 Catalog and Cow

Book Free
It's so good that no dairyman who owns 2 or 100 cows can afford to be without it. All I ask you to do is first get my proposition before you decide to purchase any cream separator of any make, kind or at any price. Just drop me a postal. Address: Wm. Galloway, Pres., Wm. RAW OR COOKED
Most of the food you eat is cooked—why—because cooking is partial digestion. When you want to fatten, condition or improve animals—the stock on your farm—you must do the same thing—feed food that will quickly digest or is partly digested and free of germs.
Cooking Kills All Germs
Cooking kills all germs, prevents hog cholera, and all such diseases in animals. The cooker for this work is the HEESSEN—which, because of its peculiar construction, is quicker—stronger—and better. Has the largest fire door—indestructible cast iron kettle—in a cold-adapted steel jacket, both of which will last forever. It is adapted to burn either wood or coal, and the price is about one-half that of cookers which are actually of equal capacity.
This cooker made us famous—Thousands in use and we have testimonial after testimonial from prominent users.
Write for our Free Booklet "The Undigested Toxins" telling how to feed to avoid disease—worth money to you.

THE POULTRY YARD

Producing and Marketing

The Question of Kerosene as a Poultry Remedy

By Archie E. Vandervort,
Sidney Centre, N. Y.

DOCTORING poultry is an unprofitable business, and doubly so if one indulges in expensive remedies. The remedies used in the poultry yard should be simple, inexpensive and heady at hand.

Fortunately every one has them in kerosene oil and lime with the addition of olive oil, sulphur and lard. I am moved to touch upon this subject through recent warnings in popular journals against the use of both coal oil and lime. A caution in regard to the careless use of all remedies is never out of place. Most people dearly love to dose something and the poor fowl makes such an easy victim it may be stuffed or doused too effectually for its health, and I fail to remember a case where the doctoring is not overdone.

Yet many years' experience and observation have proved to me that kerosene, even in careless hands, is about as harmless as anything used in the poultry yard. One should have too much gumption to pour a spoonful of undiluted kerosene down a fowl's throat. Still it is often done and the poor bird lives to tell the cruel story. In the article referred to on the dangers of kerosene its blistering qualities are dwelt upon and incidents given of this result upon both man and fowl, all of which is very true if the kerosene is applied freely and the air excluded by bandages or feathers, but not otherwise.

For sore throat and many kindred complaints in people, kerosene is effective, and for the itching and inflammation of chilblains it often acts like magic, but if either the throat or feet were bandaged with it blistering would follow. The writer is acquainted with an old Texas stockman whose only remedy for forty years for colds induced by the extreme exposure of his calling (shipping horses, sleeping in cabooses, etc.) has been kerosene as an outward application and two or three drops on a lump of sugar taken internally.

For fowls with a wheezing in the throat and stopped-up nostrils nothing is better. A teaspoonful of mixed olive oil and kerosene, in the proportion of about two-thirds of the former to one-third of the latter, given to the fowl and the nostrils well sprayed with a like mixture, will afford almost instant relief, also cure incipient colds and thus prevent an outbreak of roup. The same course in roup will prove as successful as any of the more elaborate and expensive treatments and remedies. In the article before mentioned a case is related of doctoring for scaly legs by dipping the fowls' legs in kerosene and setting it back on the perch with the result that the fowl's breast was blistered. Very likely. The feathers would exclude air and cause blistering, which wiping off the legs or exposing them a few minutes to the air would have prevented. In any case kerosene is too drying in its effects to use for scaly legs. A salve made of fresh lard and sulphur, with a little carbolic acid added, is the better remedy. With head and body lice in either mature fowls or chicks, where grease is so generally recommended, the proper thing is kerosene, but the fowls should not be dipped or soaked in it.

A clean, soft cloth should be dampened with the kerosene and rubbed over the affected parts with the lay of the feathers. It destroys the insects, cleans the feathers and saves no bad results, while grease musses up the fowls and often kills the chicks. To repeat: Doctoring fowls is mighty unprofitable business for the poultryman, and prevention should be his watchword—strong stock, proper feeding and housing, cleanliness. When sickness does occur in the flock his remedies should be the simple ones indicated—and the hatchet.

Among the Poultry

AS IT IS the custom with poultry keepers to cull out all undesirable fowls at this season, and to arrange for the number to be kept over, it follows that owners should have been observant enough to know the characteristics of their fowls, unless large numbers are kept—lest, in order to make room for the younger pullets, older hens be sacrificed which would really have been the most profitable. One of the undesirable qualities in hens is a desire to sit after laying a few eggs. This is caused generally by too much fat and is most common in the Asiatic breeds. Second, those that are ill-formed should be discarded, as this characteristic descends to progeny, and discard all really old hens, but a hen is not to be set aside as useless as long as she furnishes her quota of eggs. Many hens will be found to be laying as well at four years as at two.

Poultry should be well along in the molting process now and some almost through, having begun in August or possibly in July. Such hens will make good winter layers. It is safe to say if poultry does not finish molting by the time cold weather sets in they will be likely to postpone laying until spring, but such ones will prove early spring layers and will continue laying all summer, which will be full compensation for the winter inactivity, provided food and space can be spared. As with the late molting ones, so with the late pullets. Pullets hatched in March will molt in November or possibly in December, just the time eggs are bringing good prices, and there will be no eggs from them until the feather-removing process is over. Those that were hatched in April will be the ones to depend upon for eggs during winter. Leghorns lay perhaps the earliest of the breeds commonly grown. They have been known to lay at five months. The larger breeds begin to lay at eight to ten months.

Food-containing oils, such as linseed meal, mixed with grain food, oats, wheat, etc., will hasten the molting process to some degree. Egg-producing foods should not be fed at this time, but only such as is needed to keep up the system during this drain upon it. Poultry should be well cared for during this critical process, given clean, dry quarters and fed liberally. For hens that have quit laying try a change of food. Give crushed bone and meat scraps and corn soaked in lime water and afterward dried. This aids digestion and assists in egg formation. Give this only twice a week.

—A. C. McPherson.

Poultry Marketing

What is to be done so that the farmer can assure himself that the proper course is being adopted in handling poultry and eggs so that he may get the larger profits? The way will shortly be opened to the farmer to improve his conditions very considerably. The American Poultry Association is preparing a book for the use of farmers and hucksters and dealers and packers and commission merchants that will offer instruction on the important points of marketing poultry and eggs so that much of the loss that now comes to the farmer may be avoided. Many farmers are disgusted when they ship a case of eggs to a dealer because the returns they get are not what they expected. There are breakages and bad eggs to be deducted. When the eggs get to the hands of the dealer there are a considerable number discarded, and those which are

good and those which are not so good are separated. If they had all been good—if they had all been highest grade, the farmer should have received more money for them. Many farmers feel they have been cheated by the buyer of eggs when he complains of poor quality. In their minds they feel that the eggs they shipped from the farm were first class, yet some little things may have occurred while the eggs were in the farmers' possession that changed the condition of the eggs altogether.

Lowest Prices Ever Made on World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing

As Long as Building Stands Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end. Its cost per square is the lowest ever made. It has no upkeep cost. Always beautiful in appearance. Reducing cost of fire insurance.

EDWARDS Exclusive Tightcote Process

Makes Rust-Proof Roofing. The zinc spelter becomes practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingle, Grip-Lock Roofing, Pressed Standing Seam or Roll Roofing, Ceiling, Siding, etc., is dipped in a bath of molten zinc, one at a time after the metal has been stamped and resquared. The edges are galvanized as heavily as the steel. Not the space of a pin-point on the steel is exposed to the weather.

How To Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with your finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking.

EDWARDS Patent Interlocking Device

Prevents Warring, Buckling or Breaking. Protects Nail Holes. Roof never warps, buckles or breaks—nails are driven through the under layer not exposed to weather—cannot rust. No special tools or experience needed to lay EDWARDS Galvanized Steel Roofing; anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles

Cost Less, Outwear 3 Ordinary Roofs and are your joy and pride forever. No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs.

GARAGE \$49.50

Lowest prices ever made on Ready-Made Fire-Proof Steel Garages. Set up any place. Postal brings illustrated 64-page catalog free.

Santa Rosa Plantation Company
Room 311, 208 N. 5th Ave. Chicago, Ill.

the body—with the feet elevated nearly level with the hips. This position rests the spine, the whole body relaxes and a sense of restfulness takes possession. Closing the eyes while thus resting is a great help, as it leaves the mind free from suggestion and rests the eyes, which often sadly need these rest periods.

If one is anxious and worried, or too nervous to remain quiet with eyes closed, try reading a few pages of a good, interesting book. This diverts the mind, gives food for thought and relaxes the body at the same time, for if the thoughts are diverted into a pleasant channel the tension of the body is lifted, the nerves quiet down and the whole system is benefited.

Many times when overtired or over-anxious ten or fifteen minutes spent out of doors in the fresh, invigorating air with the blue of the sky above and the green of the grass beneath is of incalculable value. Even in these wintry days, with the far vista now possible of snow-covered hills or broad expanse of prairie, it does one's very soul good to get out and battle with the wind and storm for a few minutes or even longer, and helps to make lighter work of the pile of mending and darning, cooking and baking and the other multitudinous duties of the housewife.

These are but a few simple suggestions, but any one of them, if duly followed, may prevent a nervous breakdown and incidentally assist in making a happy home.

HOUSEHOLD HELPS

WHITE curtains may be made a beautiful ecru tint by following these directions: Dissolve tumeric powder, one tablespoonful to a gallon of water. After the white curtains have been thoroughly cleansed, boil in this solution for a few minutes.

NEVER let a mirror be hung where the sun's rays fall upon it. The light and heat produce a chemical disintegration of the quicksilver at the back, which injures the reflective power and makes the glass dull.

BORAX generously sprinkled about the stove and in the corners of a kitchen infested by cockroaches will rid it of the pests in a short time. It is well, however, to occasionally use the borax again to prevent their reappearance.

I WONDER how many cooks know that when boiling meat—corned beef, chicken, or in fact meat of any kind—a tablespoonful of vinegar to a large piece, placed in the water when first put over the fire, will make it deliciously tender. There will be positively no taste of the vinegar in the meat when cooked.

TO MEND broken china, into a thick solution of gum arabic stir plaster of paris until the mixture assumes the consistency of cream. Apply with a brush to the broken edges of china and join together. The whiteness of the cement adds to its value.

TO WHITEN linen or cotton put into every ten gallons of wash water one large handful of borax, or put into the boil water before heating one tablespoonful of turpentine, boiling the fabric in this.

TO PRESERVE the color of black stockings, add a teaspoonful of good vinegar to the last rinsing water, and do not iron them at all, as a hot iron takes out the color.

ONE tablespoonful of kerosene added to each boiler of water will lessen labor as well as whiten your clothes when washing.

TESTED RECIPES

MOLASSES NUT CANDY—Mix one cupful of brown sugar, one cupful of molasses, one tablespoonful of vinegar and one ounce of melted butter. Boil until the mixture hardens in cold water, then add a teaspoonful of baking soda and a cupful of walnut meats. Pour into buttered tins and when partially cool mark off into squares.

RED KIDNEY BEAN SALAD—Boil one cup of red kidney beans in salt water until tender; drain and add one cup of English walnuts broken up, six minced olives, and one cup of finely cut celery. Mix well and serve with mayonnaise dressing.

NUT CRACKLE—Cover the bottom of a greased shallow pan thickly with mixed nuts, such as almonds, pecans, peanuts and English walnuts. Put one pound of granulated sugar into a saucepan over the fire and stir until it is melted, being careful not to allow it to burn. Pour at once over the nuts and stand it aside to cool. When cold break into pieces. This is a very popular sweet.

CHOCOLATE CARAMELS—To one pint of rich milk add three pounds of light brown sugar and one-half pound of butter. Let the mixture come to a boil, then add one-half pound of scraped chocolate. Let it boil until it becomes quite thick, stirring it all the time. It is best to mix the chocolate with a cup of boiling milk before adding it to the whole. When done flavor with vanilla, pour into buttered pans and cut before it is quite cold.

An Equity Success in Wyoming

In December, 1913, a number of farmers near the town of Pine Bluff, Wyo., established a local clearing house of the Farmers Society of Equity with an initial membership of fifteen. These few members expressed their interest and determination by going to work to build up the local association and new members were brought in steadily.

The neighboring vicinity of Albin became interested and in March, 1914, a local was organized at that point and this also has continued to grow and prosper. The Pine Bluff local now has a membership of 102 and the Albin local has forty-one members on the list.

The members first began shipping grain by shoveling it into cars, a very slow, laborious method, but the advantage in dollars and cents was so apparent to the farmers after giving the Equity system a fair trial that a short time afterward a day was set and the announcement made for a meeting to consider the purchase and operation of a co-operative elevator.

At this meeting there was a good attendance and after careful consideration it was decided to purchase a new elevator of 30,000 bushels capacity that was being offered for sale in order to settle up a business. They thereby demonstrated sound business qual-

Santa Claus is Coming

Santa Claus wants every little boy and girl in the United States to have one of these wonderful Christmas stockings when he comes to leave his Christmas presents. As a special holiday treat for our readers, and particularly the children, we are going to give one of these wonderful stockings.

The biggest, the brightest, the roomiest stocking Santa Claus ever had to fill. It is 35 inches long. It is six times as long as the illustration shown here and four times as wide. This stocking is all made in beautiful colors. Santa has on a pretty red and black cap. The bricks in the chimney are of a dark red color. The room in which the little girl is dreaming about Santa is blue and white and the two pretty reindeer which pull Santa's sleigh look like real ones. The stocking is lithographed on good heavy cloth, and is so big that Santa can put most anything in it, even a baseball bat, an air rifle, a pair of skates, a doll, chunks of candy and lots of other nice things.

This stocking will make Christmas look so much more cheerful and the stocking itself will be a beautiful present.

The children will love to pack and unpack this stocking for weeks after Christmas is over. What a lovely Christmas present this will be. Most as nice as the presents which go into it.

OUR OFFER

Send us 25 cents for a new or renewal subscription to UP-TO-DATE FARMING for 6 months, and we will send you one stocking prepaid. If there are two little boys or girls in your house, each of them should have a stocking; or if you have a neighbor or a relative, or probably have a little niece or nephew or cousin to whom you would like to send a Stocking for Christmas, you can have two or more of these pretty stockings by sending us a six-months trial subscription for each, or two for a full year at 50 cents. In filling out the coupon be sure to state whether you desire one stocking or two or more, and send names and addresses of all subscribers written perfectly plain.

Valuable Rewards for Our Subscribers

On this page are some of the most valuable rewards ever offered by Up-to-Date Farming for renewals, new subscriptions and clubs. Heretofore we have not included wearing apparel in our premiums. But knowing the need of such things in every home, and thus to supply a real need, we offer several articles that can be worn, things that there are never too many of. These articles can not be secured to better advantage anywhere else; besides we will extend your subscription from one to three years with the various offers. Each family surely gets money value in the 24 numbers of Up-to-Date Farming. Thus money now invested in subscriptions returns double value. Each article guaranteed or may be returned and money refunded. These articles will make fine Christmas presents.

House Dress

Sent With Two Years' Subscription for \$1

No housewife ever has too many dresses, and more especially dresses which can be worn while at home—more commonly known as house dresses. This useful article every woman must have—can not get along without. The dress which we will send you is strictly high grade. You will consider it a bargain. Send us \$1 and we will credit you to two years' payment to UP-TO-DATE FARMING and send you this serviceable dress. When ordering state color, length, bust, sleeve length and yoke measurement desired. It is made from the very best gingham, with fast colors, having excellent washing qualities, and will iron easily. Send for it at once and you will be pleased.

House Apron

Sent With One Year's Subscription for 60c

This is probably your first opportunity to get a house apron free. It is a new idea and called the "Bungalow Apron." It is made with 4-in. cuffs and a big pocket, all taped.

The apron (just like cut) is 55 inches long, with bust measurement of 42, 46 and 50 inches, and is in reality an over-dress. It is made from gingham and indigo percales, also Hdygrade cloths, all of excellent colorings and designs. This new design was just recently put on the market. Send us 60 cents and we will extend your subscription for one full year and mail you this useful House Apron by parcel post, prepaid. Send bust measurement, also color desired.

School Girl's Blouse

Sent With 2 Years' Subscription for 95c

You have heard of the Middy Blouse. We know you want one for your daughter, especially if she is going to school. Girls, did you know that this is the very latest and that thousands of girls everywhere will wear them this fall and winter? This blouse, like illustration, is made of white jean, collars are trimmed in blue; or you can have it in all white. Those with blue collars are made of galatea and guaranteed fast colors. We are going to send this to you postpaid and credit you with two full years' subscription all for 95 cents. This blouse is made in any size from 12 to 20. Be sure to state size wanted, and if you desire blue collar or all white. This is a useful piece of wearing apparel.

Men's Black Hose

Three Pairs Sent With a Year's Subscription at 50c

Here, gentlemen, is the very thing you need. Three good pairs of "Guaranteed" black hose, absolutely stainless, fast black, garter edge, long ribbed top, best quality of domestic cotton yarn; will give you excellent wear. This is an article that meets the need of every man. Send us 50 cents for a year's subscription to UP-TO-DATE FARMING and we will send you three pairs of these "Guaranteed" hose free. Don't fail to mention size desired.

Seven-piece Berry Set

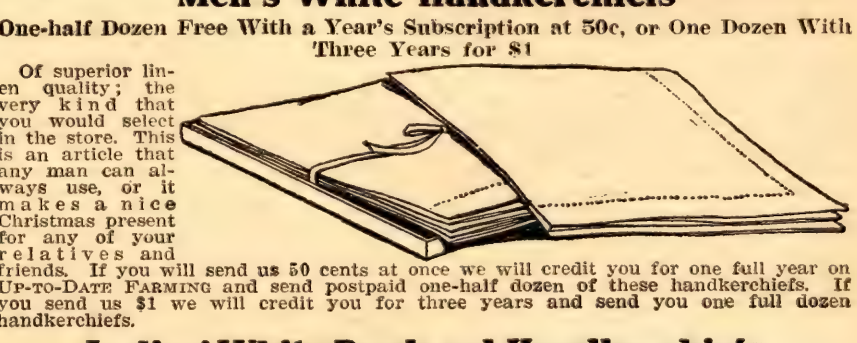

Sent With Three Subscriptions for \$1

Consisting of one large berry dish and six small dishes. It is one of the most serviceable and unique combinations that you can obtain. Can be used for many things besides berries. The decorations consist of a rich velvety underglaze blue border, covered with a pure coin gold wreath design with coin gold edge line. The center is a crown derby design. It is impossible in this illustration to give the rich colorings of the design. This is indeed a great bargain. We are going to send you this beautiful seven-piece berry set and three full years to UP-TO-DATE FARMING all for \$1.

Men's White Handkerchiefs

One-half Dozen Free With a Year's Subscription at 50c, or One Dozen With Three Years for \$1

Of superior linen quality; the very kind that you would select in the store. This is an article that any man can always use, or it makes a nice Christmas present for any of your relatives and friends. If you will send us 50 cents at once we will credit you for one full year on UP-TO-DATE FARMING and send postpaid one-half dozen of these handkerchiefs. If you send us \$1 we will credit you for three years and send you one full dozen handkerchiefs.

Ladies' White Bordered Handkerchiefs

Send 50c for One Year and Get One-half Dozen, or Send \$1 for Three Years and Get a Full Dozen

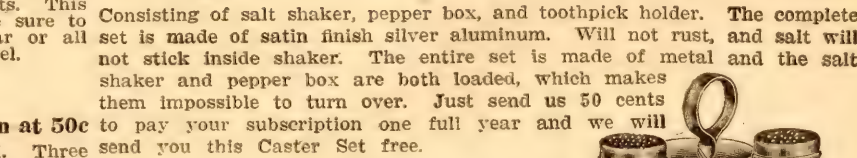

These are plain hemstitched handkerchiefs in popular selling and wearing qualities, with drawn open work hemstitched borders. They have a soft finish of good linen. Send us 50 cents for a year's subscription and we will mail you one-half dozen of these handkerchiefs in a neat box. Or send \$1 for three years and get a dozen. These will make elegant Christmas gifts.

Canvas Gloves

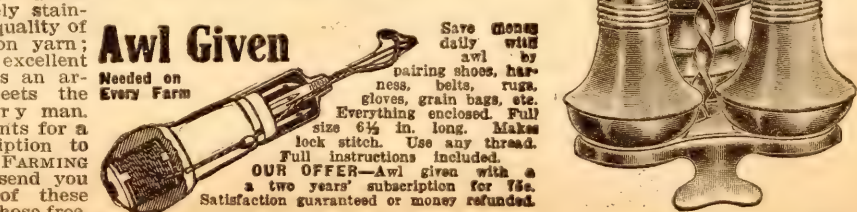

Send 50c for One Year and We Will Send You Four Pairs

Here is the very thing that every man on the farm needs. He will need at least four pairs of canvas gloves this winter. They are made of durable seven-ounce unbleached twill, double stitched, strongly sewed, well finished. We will send you four pairs of these gloves and credit you with a full year's subscription all for 50 cents. State whether you desire large or medium size.

Three-Piece Castor Set

Consisting of salt shaker, pepper box, and toothpick holder. The complete set is made of satin finish silver aluminum. Will not rust, and salt will not stick inside shaker. The entire set is made of metal and the salt shaker and pepper box are both loaded, which makes them impossible to turn over. Just send us 50 cents to pay your subscription one full year and we will send you this Castor Set free.

Awl Given

Needed on Every Farm

Save money daily with awl by pairing shoes, harness, belts, rugs, gloves, grain bags, etc. Everything enclosed. Full size 6 1/2 in. long. Makes lock stitch. Use any thread. Full instructions included. OUR OFFER—Awl given with a two years' subscription for 75c. Satisfaction guaranteed or money refunded.

Up-to-Date Farming, Dept. C, Indianapolis, Ind.

Farmers Organization and Co-operation

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

Too much importance can not be attached to the meetings to be held in Omaha in the week beginning December 7th.

At the Nebraska Farmers' Congress meeting, beginning on the 8th and lasting three days, many of the leaders in agriculture and other industries will address the people. That the sessions of the Congress will be interesting and helpful to all who attend there can be no doubt. A program of the meeting can be obtained of the secretary, W. S. Delano, Lincoln, Neb.

Naturally the Farmers Society of Equity sixth annual convention, beginning on Wednesday, December 9th, will especially interest the readers of this paper who are members of the society. It will be a more important convention than any of its predecessors, therefore it should have a full representation as provided by the by-laws and which provisions are printed in another column of this paper. The meeting place is central in the country, as well as being very central for the organizations of our society. We urge, if any local, county or district clearing house, regular or federated, or state union has not yet arranged for representation that it be attended to at once.

And to round out the week the American Farmers Federation, that was tentatively organized at Kansas City, Kas., last August, will begin its sessions on Thursday the 10th. Thus the week will be filled with meetings that perhaps will represent the different phases of agriculture more thoroughly than any farmers' meeting or series of farmers' meetings ever held before. The Congress will be given to addresses on all agricultural and some related topics. The Equity meeting will largely concern itself with the great problem of marketing, which is the chief object of the society, while at the federation meeting an attempt will be made to build a platform on which all farmers' congresses, societies, organizations, unions and associations can stand shoulder to shoulder to bring about universal unity in the vital matter, to all producers from the soil, of marketing their products.

We have before us a letter from which we quote this:

Three or more farm organizations, with each a different plan of operation and each a different head through which to operate, can never accomplish the problem of marketing farm crops. Each may have merit, but as long as they do not harmonize in all things and in some things, which are vital, they are at variance. Further trying to solve farmers' great problems along such divided and competitive lines is a waste of time and money.

This writer thus points out the weaknesses of present farmers' organizations and concludes that it will be a waste of time and money to continue in the same way. We know he does not condemn any of the organizations but he recognizes that the time has come when they must put themselves in a position to confer more benefit on their members or they will be discarded by the farmers. We quote further from his letter:

Unless something is done by the various organizations to provide better marketing facilities for their members, such as the American Farmers Federation proposes, I claim that we will observe a rapid falling off in the membership, and many subordinate organizations will surrender their charters and quit paying dues. I mean that unless the national organizations can secure for their membership more benefits

than they have been getting, the organizations will not be worth keeping. What we farmers now demand is an organization that will give us service whenever profitable service is needed, and we are willing to pay for such service whatever it costs.

This brings right around to the years of teaching of this paper, that the bane of American agriculture is too many competing, rival and often antagonizing organizations when it comes to the vital end of all productive agriculture—the distributing end. The competition of the different organizations for the markets is as fatal as the competition of the individuals was. Now don't understand that it is necessary to clear the field of the present organizations and build anew. Not at all. Every present organization, we will say, can be used if the right federation plan is adopted, and every present organization will be strengthened if a platform on which all can stand and work for unity in marketing is adopted.

Another party, in commenting on the meetings to be held in Omaha, wrote this:

I am urging many of our best farmers to go to the Omaha meetings. I am hoping for a large attendance of representative producers and that the final result will be a national farmers' federation big enough, liberal enough, scientific enough, simple enough, but comprehensive enough, broad enough, free enough and unselfish enough to appeal to and satisfy all the different national and smaller organizations in the whole United States. We farmers must demand this; and when it is furnished we must further demand that the present officers of the organizations must stand on such platform or we must weed them out. As far as our vital problem of marketing is concerned the jealousies and selfishness displayed by some national and subordinate leaders must not be permitted to stand in our way. We had better sacrifice such leaders than to continue to do business longer under the vicious system that makes every farm operation a gamble. Let us go to Omaha with the determination to end the competition of many organizations, if a practical plan can now be found, and to select leaders who are broad enough and large enough and fair enough to fill the positions that such an organization or federation demands for the whole agricultural business.

So we appeal again to the farmers to go to these meetings. If not a member of any of the organizations or sent as a delegate, go independently. The time has certainly come when farmers must prepare to do more of their own business instead of turning it over to others to do. And the plain signs of the times show that now they can prepare to do their own business. We have seen every year that hundreds of meetings are held by other people in the interest of agriculture and farmers. But if other people can go to meetings to discuss farmers' matters, why can not farmers go themselves?

They can go. Ten thousand farmers can go to the Omaha meetings just as well as not if they make up their minds to do so, and the little money they will need to spend will be the best investment ever made. And when farmers have the right kind of a business organization they can use it and will use it, because it will not make them any more work and need not take them away from home any more than without it. On the contrary they can turn many of the annoying details of business to the business agent that will represent each community.

On to Omaha!

READ UNDERSTANDINGLY

Some of the trials that a publisher has arise from readers not reading carefully and noting and abiding by the exact terms laid down. This is particularly true at this time of the year, which is the renewing and subscribing time, and when some premiums are offered for renewals, subscriptions and clubs. As there are several such offers in this paper we ask each person to read carefully and understand the terms, and order in accordance with them. As an example of

what some people will do we call attention to the line or two at the top of the first page. A similar testimonial about UP-TO-DATE FARMING has been printed there for several issues. Well, the person whose name was given has each time received a number of letters from people who thought they were writing to the publisher of the paper. So we say "read understandingly" and one cause for delay in your orders having attention will be removed and the publisher will be saved much extra work in a busy season.

When the World Sleeps

—a hundred thousand lone night workers, at a thousand different tasks, lighten the long hours and hearten their labors with the fragrant comfort of fresh-rolled "Bull" Durham Cigarettes.

Wanted 100 nursery agents; special inducements; pay weekly. Address Perry Nurseries, Rochester, N. Y.

FARM LANDS

We Call the attention of all farmers and others interested in real farming lands to our choice selection of 20,000 acres of fine smooth prairie lands, located in the southeastern part of the Gulf coast of Texas, at and near the towns of Hampshire and Winnie, Texas. The soil, covered with heavy blue stem and Buffalo grass, is a dark brown loam, with a sufficient amount of sand mixed. Subsoil is clay. These lands are adapted to general farming and are great producers of excellent corn, cotton, ribbon cane, rice, all forage crops, like milo maize, kafir corn, sorghum, and numerous other feed crops, assuring successful stock raising and dairying. These lands, located in the most healthful climate, are now offered for sale at prices ranging from \$30 to \$60 per acre on very convenient terms. Here is the chance for farmers to obtain a better net result from their investment of money and time and work than on lands in the Middle West selling \$150 to \$300 per acre. This is a fact just considering the possibilities of general farming in this famous section, not counting the profits from truck farming and fruit raising both of which are at home in the Hampshire-Winnie country. It is worth your while to look into this. If interested in this bona fide proposition, write at once for free booklet on Hampshire-Winnie to the owners. Theo. F. Koch & Co., 1832 Transportation Bldg., Chicago, Ill.

Last Private Car excursion of 1914 to the Swigart Tract in Mason, Manistee, Lake and Wexford counties, Michigan, leaves Chicago at 11:30 a. m. Tuesday, December 8; round trip fare only \$8.30, rebated on purchase; come on this excursion; spring, with its unending advance in prices, will be here again before you know it; it is a little harder to buy land each succeeding year; 50,000 acres from which to select for general farming, growing of truck, grains, grasses, live stock, dairying and fruit growing; good transportation, lake and rail; all lands near town and railroad stations; close to the markets of Chicago, Milwaukee and Detroit; \$10 to \$35, and much good land at \$18 per acre; \$5 to \$10 per month, or annual terms; write for 72-page illustrated book and large map and tell me if you will join this excursion. George W. Swigart, 12-1250 First National Bank Bldg., Chicago.

60 Acres fine productive virgin soil near Yellow Pine, Ala.; ideal climate, pure water, healthful location; snow unknown, no hot summers; not far from the Gulf; will produce \$25 to \$100 per acre profit yearly, according to the crops; fine stock country, no winter; produces corn, peaches, strawberries (early), oranges, all vegetables in profusion and early, cane, pecans, melons, potatoes, cotton, etc. I have a special price; bound to increase in value account of Panama Canal trade. J. B. Fentony, Indianapolis, Ind.

Virginia Farms for sale, especially adapted to grain, grass, clover, fruits and vegetables, at \$8 to \$20 per acre; mild and beautiful climate; write for descriptive catalogs. Jeffreys, Hester & Co., Chase City, Va.

Two Well improved farms for sale, in high state of cultivation; 576 acres and 391 acres respectively; just south of Lamoni, Iowa, in Missouri. No trades. Am sole owner. Description and prices on application. Address C. A. Springer, Gilman City, Mo.

Farms wanted. We have direct buyers; don't pay commissions; write describing property, naming lowest price; we help buyers locate desirable property free. American Investment Association, 71 Palace Bldg., Minneapolis, Minn.

Free Government Land. Near 500,000 acres in Arkansas now open to homestead entry. Guide book with lists, laws, etc., 25c. Township map of state, 25c additional. L. E. Moore, Little Rock, Arkansas.

Quick Cash for your farm or business, no matter where located; low fees, quick sales; special terms to owners. Write Dept. 4, Co-operative Salesman Co., Lincoln, Neb.

If You seek a place to winter or grow general farm products, vegetables, oranges, etc., get our booklet. Board of Trade, Box E-265, Bartow, Florida.

Wanted To hear of good farm or unimproved land for sale; send description and price. Northwestern Business Agency, Minneapolis, Minn.

California Gems mounted in artistic jewelry; buy direct; free catalog. H. Symonds, Dept. 6, Long Beach, Cal.

Wanted Good farm, well located; give description and price; from owner only. Pollitt, Box 754, Chicago.

Little River Valley lands rich and cheap, on railroad. Robert Sessions, Wintthrop, Ark.

Carolina Farms; all staple crops, truck, fruit. Write Henry T. King, Greenville, N. C.

2000 Ferrets for sale. Write for price list, it's free. Dekleine Bros., Jamestown, Mich. Box 89.

Regarding Renewals

A great deal of unnecessary labor in our subscription department, and time and postage on the part of subscribers, will be saved if everybody will remember that credit for renewals can not always appear on the next paper received. Do not expect expiration date to be changed until the second paper you receive. If credit does not appear on your address label on the second paper you receive after paying it will be time enough to start an investigation.

Don't Sell Your Broom Corn

STORE IT. Buyers of broom corn are working concertedly to get hold of as much of the crop as they possibly can at the lowest price they can squeeze. The crop is not large and the price will be higher. The Farmers Society of Equity has arrangements for storing broom corn by which about as much cash will be advanced on it as soon as loaded in car as the buyers will pay, and the grower can get all advantage of the advance of the market. Tell your neighbors, spread the news. Full instructions on request. See also Markets, page 19. This opportunity is open to all readers.

Who Gets the Cream of the Profits?

Our county clearing house has shipped numbers of cars of hogs and wheat, and has a stock of farming implements, and both are saving our members money. In our own local we are going after the cream problem, as our members have a large milk supply and feel that they are not getting a square deal on their cream.—Enoch Peterson Jr., Mink Creek, Idaho.

A Good Word for Us

I am a member of — (a farmers' organization), but UP-TO-DATE FARMING gives me more co-operative information than our official paper. I have read and valued your paper for many years.—George McFall, Illinois.

Deafness

Mention Up-to-Date Farming

PUZZLE DEPARTMENT

Try Your Skill and You May Win a Prize

The last puzzle was very popular with our readers. Several hundred took part in the contest, and a large number of exceptionally fine letters was received. It was a difficult task to select the winners. But the three following were picked as the three best letter writers of those who had the correct solution:

L. R. Morris, Holton, Ind., first prize, \$3.00.

Mrs. J. W. Brown, Bucklin, Kas., second prize, \$2.00.

S. C. Elliott, Hugoton, Kas., third prize, \$1.00.

Below are the first and second prize letters, which were exceptionally good:

I answered the advertisement of the Mantle Lamp Company, because a good light of some kind is something no farmer can afford to do without, and because it would be almost impossible to buy such a lamp at home. And last, but not least, Up-to-Date Farming stands back of every advertisement and guarantees it to be reliable.—L. R. Morris.

I have answered the W. F. Young advertising, having been attracted to the "Absorbine" ad as a complete description of bone spavin, which we are making an effort to cure on a valuable horse. I have not received the medicine yet, but if it is all the ad claims it to be, we will be amply repaid in curing the horse.—Mrs. J. W. Brown.

Correct answers to the November 1 Puzzle were: (1) Stover Mfg. Co., (2) W. F. Young, (3) Hunter Watch Co., (4) Miller Mfg. Co., (5) Paragon Tailoring Co.

Here is the new puzzle:

OF THIS PAPER you can find out how to make money in the city and country. It is the only paper that gives you the inside story of the money market. It is the only paper that gives you the inside story of the money market. It is the only paper that gives you the inside story of the money market.

our life is made up of many different parts. Some are good, some are bad. Some are happy, some are sad. Some are full of love, some are full of hate. Some are full of hope, some are full of despair. Some are full of faith, some are full of doubt. Some are full of courage, some are full of fear. Some are full of strength, some are full of weakness. Some are full of wisdom, some are full of folly. Some are full of goodness, some are full of evil. Some are full of light, some are full of darkness. Some are full of life, some are full of death. Some are full of joy, some are full of sorrow. Some are full of peace, some are full of war. Some are full of love, some are full of hate. Some are full of hope, some are full of despair. Some are full of faith, some are full of doubt. Some are full of courage, some are full of fear. Some are full of strength, some are full of weakness. Some are full of wisdom, some are full of folly. Some are full of goodness, some are full of evil. Some are full of light, some are full of darkness. Some are full of life, some are full of death. Some are full of joy, some are full of sorrow. Some are full of peace, some are full of war. Some are full of love, some are full of hate. Some are full of hope, some are full of despair. Some are full of faith, some are full of doubt. Some are full of courage, some are full of fear. Some are full of strength, some are full of weakness. Some are full of wisdom, some are full of folly. Some are full of goodness, some are full of evil. Some are full of light, some are full of darkness. Some are full of life, some are full of death. Some are full of joy, some are full of sorrow. Some are full of peace, some are full of war. Some are full of love, some are full of hate. Some are full of hope, some are full of despair. Some are full of faith, some are full of doubt. Some are full of courage, some are full of fear. Some are full of strength, some are full of weakness. Some are full of wisdom, some are full of folly. Some are full of goodness, some are full of evil. Some are full of light, some are full of darkness. Some are full of life, some are full of death. Some are full of joy, some are full of sorrow. Some are full of peace, some are full of war. Some are full of love, some are full of hate. Some are full of hope, some are full of despair. Some are full of faith, some are full of doubt. Some are full of courage, some are full of fear. Some are full of strength, some are full of weakness. Some are full of wisdom, some are full of folly. Some are full of goodness, some are full of evil. Some are full of light, some are full of darkness. Some are full of life, some are full of death. Some are full of joy, some are full of sorrow. Some are full of peace, some are full of war. Some are full of love, some are full of hate. Some are full of hope, some are full of despair. Some are full of faith, some are full of doubt. RAISE BIGGER CROPS

My New No. 8 Low Down Manure Spreader

used now means bigger crops next year. You know this yourself. Manure spreading time is all the time. This new No. 8 Low Down Manure Spreader is Galloway's greatest spreader.

Positively the best spreader on earth. Double chain drive, endless apron; force feed; front wheels cut under load; close hitch; light draft of any low-down machine. Capacity 60-70 bushels. All steel gear, complete with double trees and neck-yoke. Flexible rake; high speed beater pulverizes finely any barnyard material. Steel wheels; gears coupled with channel steel, trussed like a steel bridge. Box rests on rear trucks, 42 inches high. Superior in every respect to new fangled freaks of heavy draft that eat you up for repairs, annoy you and kill your horses.

K. K. Foust, Ashley, Ohio, writes: "Please find draft for spreader received October 6th. Assume you 1 am more than pleased with same. It has proven all you claim and more. By buying of your company, I saved \$21.80 and got just what I was looking for."

My Book "A Stroke of Gold" FREE tells all about handling manure to get the greatest profit. No not buy a spreader of any make at any price until you have dropped a postal asking for this great book worth \$1.00 (costs you nothing) and my BIG SPECIAL SPREADER CATALOG that tells the truth about the spreader business. Mailed free. Get RIGHT on this spreader proposition before you buy.

Wm. Galloway, Pres.

A Merry Christmas for That Boy of Yours!

Your boy's Christmas will be the happiest ever, if you will send him THE BOYS' MAGAZINE. It is a gift that lasts a whole year. THE BOYS' MAGAZINE is chock-full of just the kind of reading you want your boy to have. Clean, inspiring stories by the very best boys' writers. Practical and instructive departments devoted to Electricity, Mechanics,

Athletics, Photography, Carpentry and Stamps and Coins. THE BOYS' MAGAZINE is beautifully illustrated throughout in both black and white and in colors. Each issue has a new handsome cover in colors.

WALTER CAMP is a contributing editor. Mr. Camp is known everywhere as America's highest authority on Athletics. Every boy should read Mr. Camp's ideas of true, manly sportsmanship.

SPECIAL OFFER: For only \$1.00 we will send you THE BOYS' MAGAZINE for a whole year and a copy of the most useful and practical book you ever read, "Fifty Ways for Boys to Earn Money," and this splendid Electric Engine. This engine is a perfect piece of workmanship. It is considerably larger than illustration. Runs at variable speeds, either forward or backward, from 150 to 3,100 revolutions a minute on one dry battery. Both speed and reverse are governed by the controlling lever. Safe, easy to operate. A marvel of mechanical and scientific ingenuity.

Send your subscription to-day, and the electric engine and book will be forwarded at once, all transportation charges prepaid. Satisfaction, or money refunded. The Scott F. Redfield Co., 903 Main St., Smetport, Pa.

(THE BOYS' MAGAZINE at all news-stands, 10c a copy.)

A Card From National Organizer A. Y. Satterfield

I respectfully thank the members for the honors conferred upon me by nominating me to succeed myself as national organizer of the Farmers Society of Equity. I also heartily thank them for the nomination for treasurer, but must say I can not act in either capacity. The only national office I could possibly accept would be on the board of directors, if the members should see fit to elect me to that position. My time is entirely engaged with the Intermountain Clearing House and our fifty or sixty local clearing houses, and I would recommend that the members elect a man who can give his whole attention and time to organizing and superintending organization work—Yours for Equity, A. Y. SATTERFIELD.

Letter From R. M. Tyson of Nebraska

As nothing has been sent you from this district for sometime, I will just send this that you may know we are not dead. Instead we are alive and growing. We are doing business in the same old way and making things hum.

I was out "visiting" last week. Had enthusiastic meetings at Stoddard, Hebron, and Carlton. Our members at all these places are earnestly striving to better their conditions and are meeting with considerable success.

At Stoddard I found them keen to get hold of the business and I am sure they will make some progress in getting new members. While they are not strong numerically, they are strong in will.

Hebron has a large local membership and the meeting the day I was there was at the home of the secretary, H. D. Harding. Members began arriving about 11 o'clock, nor did they come alone or empty-handed. It was an old-fashioned country picnic. There were about eighty people for dinner, for each member took his wife and dinner basket well filled, and such a dinner as it was! Well, I am sorry you were not there. After dinner the remaining stragglers pulled in and there was full attendance at the business meeting. After disposing of all other items they took up the subject of building an elevator and made some progress in raising funds. A committee was appointed to see those not there, and in a short time they will "scoop no more."

That evening found us at Carlton, where another large gathering was on hand to greet us. Carlton has had an elevator since the 1st of July and so has done no scooping this year. They have handled about 100,000 bushels of grain at a profit of nearly \$3,000 to the members. They have a coal yard in connection with the elevator and will be able to show quite a saving on their fuel for the coming year.

At Stoddard I was entertained in the home of Jacob Kerns. At Hebron, Secretary Harding looked after me. Mr. Florey met me there and I enjoyed the hospitality of his home for the evening. At all three places I had the pleasure of talking of the plans of the Equity and was given close attention throughout. I am sure such visits will redound in good to the locals, to the district and to the national headquarters.

At Hebron the city photographer came out and took a photograph of the crowd. If possible will send you one. Also under separate cover am mailing a likeness of myself, so you will know what to look for at Omaha.—Truly yours, R. M. TYSON, District Secretary, Tobias, Neb.

(Editor's Note—We would be delighted to have such letters from all our secretaries and field workers for publication in this department. We are sure that such pleasant and profitable meetings are being held in all parts of the country, but perhaps the secretaries do not realize how interesting the account thereof would be to the entire membership. Let us have more of them.—Ed.)

Encouragement for Everybody

Since we were organized we have done considerable business in the shipping line, but not much in the buying line as yet. In the fall and spring of 1913 and 1914 we shipped twenty-nine cars of spuds, ranging in price from 25c up to 77c, and secured satisfaction in all but one or two cases.

While all spuds were not shipped through the society, the fact that we were in the business enhanced the local price, and in the first case raised it from 20c and 25c up to 49c. And the second shipment, with the exception of one or two cars, brought from 10c to 35c more than the local market was paying.

So we feel that in these two years we have done some good for the farmer. The spirit of the work is strong, and success seems certain to come in the end. The local buyers in this neighborhood are talking strongly against the movement as visionary and impractical, which is but natural for them. Hope this will instill into some weak locals the spirit to go on in the good work.—Your brother in Equity, J. W. EARNES, Secretary, Menan, Idaho.

Helping to Wake 'em Up

I am much interested in your idea of practical co-operation through organization. Our farmers are difficult to arouse. They see no way but to depend on local buyers and are slow to seek any other way. Consequently they keep themselves in a form of slavery, when they should be the most free and independent of all industrial people. I am fully persuaded that farmers must look to organization, federation and co-operation and the establishment of a national system of marketing, as taught by your paper.—A. F. Nichols, Cardiff, Tenn.

If QUALITY and PRICE Count I'll Get YOUR Fall Order for ROOFING!!

I want you and every farmer in the United States to send for my big **FREE** Roofing Book giving expert advice and information on roofing and roofing materials, also 6 large, generous samples for testing purposes. **All Free.**

I Am a Roofing Expert

having devoted 10 years to the selling of roofing. My book tells you how to buy the **best** roofing for the **least** money, gives details on how to lay it economically and tells how I ship orders **quicker** than any other house.

I Ship From 7 Factories

Located at Chicago, Pittsburgh, Scranton, St. Paul, Kansas City, Cincinnati and San Francisco. Your order is shipped from the factory nearest your city consequently saving time. All roofing is of the same grade and quality and you save from 20 to 40 per cent.

Get This Free Catalog

Before you read another word. Make up your mind to sign the coupon and send for my **FREE** Roofing Book and samples. Read carefully the advice and information it contains then

Make These Tests—

The water-test, fire-test, freezing-test, thawing-test, lightning-test and others all explained in the Big Book. Don't take my word for it. Test the roofing yourself and then you will know how I can sell you better quality for less money.

I Sell Every Kind of Prepared Roofing

including Red and Green Slate, Galvo Rubber, Flint, Mica, Marble, Gravel, White Asbestos, Composition, etc., etc. Also Asphalt Shingles, Diamond Point and Square; Roof Coating, Wall Board and other material. My special introductory offer is the most liberal ever made—

Best 1-Ply Roofing 65 cents Per Roll.

My Oriental Asphalt Shingles

More houses were covered with Oriental Red and Green Slate Asphalt Shingles last year than any other material. They're guaranteed rot-proof, acid-proof, fire-proof, lightning-proof, and water-proof. Are easily laid, will not blow off and make a very handsome roof. As cheap as wood shingles, but 100 times better in wearing quality, durability and economy. Do not under any circumstances cover your roof with wood shingles. They are made of cheap white pine and at the most will not last 5 years. Buy Oriental Asphalt Shingles and you will have a material that is

Guaranteed for 20 Years

Yes Sir! a written guarantee covering a period of 20 years. Remember they are as cheap as wood shingles and can be used in many more ways, and keep your house warmer. The basis is made of the finest quality felt, saturated in asphalt and surfaced with permanent, natural colored crushed slate.

Can Be Laid Over Old Roofing

If your roof is now covered with any other kind of roofing, you need not rip it off in order to apply my Oriental Asphalt Shingles. They come in two styles, square or diamond point strip. Sufficient special long nails are furnished so that they can be laid over old roofing. My special introductory price is positively the lowest ever made **\$4.35** per 100 sq. feet

Make Your Old Roof Last 5 Years Longer. If your roof is still in fairly good condition and you do not wish to purchase a new lot of roofing at this time the next best thing to do is coat it with

My Special Roof Coating

Without a doubt, the best roof coating made. It renders your roof—no matter of what material it may be—water-proof, fire-proof, rot-proof and acid-proof. Will adhere to any surface, stops all leaks and is

Guaranteed Permanent

Comes in black, red or green. My catalog tells you how much you will need to cover your roof. Introductory price as low as **45c** per gal.

Mail The Coupon Today

No matter what you want in roofing or roofing materials, whether you buy now or later it will pay you to send for my Big **FREE** Roofing Book and Samples. Just fill in the coupon below and mail it to me now at once!

OUR MARKET REVIEW

Reports of Crops, Markets, Trade, Etc., With Advice

KNOW THE PRICE AND ASK IT

We believe the prices attached to the crops named below are fair and equitable and farmers ought to receive them. They are based on the Chicago market, unless stated to the contrary. When the price is paid in the market is the time to sell, allowing freight and a reasonable handler's margin to make the home price. We believe these prices will be paid before the next crops are ready, purely on demand. How people will and see these for these them, they will paid. But, regardless of the number reading the paper (the circulation is now over 200,000), those of our readers who demand these prices and hold for them, will be very sure to get them, because the world needs all of the crops, and can not get along with only part of them. Those who control may need to hold until the DUMPERS have unloaded, but their time is bound to come when THEIR price will be paid. **HOLD FOR THESE PRICES. SELL AT THESE PRICES WHEN THEY WILL BE PAID AND QUIT SELLING THE HOUR THEY DROP BELOW, THEN THEY WILL GO RIGHT UP AGAIN.** Keep in mind that the more farmers who hold for and ask the prices the sooner they will come, because of reducing the supply in other hands.

A fair price, known by the producers, and that price demanded, will make marketing and prices of farm products as definite as any commodity produced in the country.

Minimum Prices

The following prices are based on conditions as they exist now. Should conditions change materially in a short time, like the end of the European war, it will make revisions necessary. We predict the war will be a long one.

Prices are based on Chicago unless stated to the contrary.

WHEAT—No. 2 red.....	\$1.25
WHEAT—No. 2 hard.....	1.25
WHEAT—No. 1 northern at Minneapolis.....	1.25

	Nov. 14, 1914	Change from two weeks before
WHEAT.....	\$9,826,000	X7,826,000
CORN.....	3,619,000	X514,000
OATS.....	37,938,000	X196,000
BARLEY.....	8,121,000	X875,000

B RADSTREET'S SUMMARY of general trade of the country on November 21 follows:

Improvement. Performance follows promise in some lines. Financial affairs easier. Collections better. Federal bank starts. Exchange resumption. Better feeling at south due to cotton markets reopening and cotton pool formation. Lower prices follow. Cold weather helps retail trade and jobbing business. War orders heavy. Better feeling in iron and steel. Cattle embargoes lifting. Wool trade hurt by war embargoes. Bank clearing rising from bottom. Failures numerous.

The improving business that we have reported the last few weeks continues. Many factories are resuming or taking on more help and lengthening the hours of operation. There is more confidence expressed in financial circles over industries which makes money more plentiful and interest rates lower. The opening of the new banking system on November 20 tended to improve financial matters. This will probably again prove the old saying that the realization is not as dreadful as the fear of it. While many bankers did not like the new system, doubtless the best thing to do was to put it in operation. The weather has been colder, therefore more seasonable and better for trade, while the forehanded farmer has his outdoor work done and is ready to quit field work should rough weather be the rule in future. Prices for cereals have been higher and lower since our last report. The most uncertain element now in wheat price is the size and quality of the Argentine crop, and reports of good weather or bad weather in that country cause fluctuations here. The wheat crop in Australia is so poor that it is practically eliminated as an exporting factor. We look for slightly lower prices in wheat when the Argentine crop begins to move in the later part of December and January, or before such time in anticipation of it, to be followed by higher prices if the European war lasts. The United States having the great bulk of the surplus wheat, and as there is a shortage of bread grain (wheat and rye) in the world, can hold the key to prices. It all depends on what price the farmers who have wheat left and the holders of supply want, and how firmly they hold. It is to

be regretted that the farmers have not in their own granaries the eighty million bushels of visible supply. At 10 cents a bushel it would mean \$8,000,000 more for the growers.

The live stock markets are still much upset over the foot-and-mouth plague. The rigid quarantines have cleared some infected sections, but new cases are frequently found in others. Progress has been made toward stamping it out, but the end, and a return to normal conditions, appear to be considerably in the future. Trade reports reflect a better condition through the south because of the resumption of the various cotton trading exchanges. But the price of cotton is so low (7 1/2 cents for middling in New York on November 22) that the producers can not be in the market to buy heavily notwithstanding that the crop promises to be the largest the country ever produced.

Contrary to our expectations, the visible of wheat shows a further liberal increase since two weeks before. It is now the greatest it has been in many years. The nearest approach to it, previous to this year, was in January, 1912, 70,489,000 bushels. Imports continue large and have aggregated 120,000,000 bushels of the last crop from this country down to November 20. There are also persistent rumors that 50,000,000 bushels more have been bought for export and awaiting carrying vessels. As far as wheat is concerned it is a much desired commodity, and while the supply is large, yet there is prospect of being a scarcity before the next crop comes.

Potato prices are higher, ditto sweet potatoes and beans. Hay is unchanged to a little lower. The printed quotations on broom corn do not truly reflect the market. Many readers of this paper are marketing their broom corn direct under our direction and reaping much benefit. Also a considerable number of cars of apples are being marketed direct to rural communities and both sellers and buyers benefited. Such business can be extended almost indefinitely.

Advice

WHEAT—Hold it for \$1.25, basis of central markets. CORN—Sell old corn, and some new if around 60 cents from the field. If this price can not be obtained we believe it will justify cribbing. OATS—Although higher, we predict still higher prices. POTATOES—Hold liberally and sell at present prices only what can not be securely held. BROOM CORN—Market direct. COTTON—It should be held even though the price is not what it should be for a year. We believe more money can be made by holding this crop than in raising a new one in 1915.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on November 14, 1914, with comparisons, are shown in the following table:

	Change same period last year	Change from a year before	Change from 2 years before
WHEAT.....	X5,242,000	X12,780,000	X22,376,000
CORN.....	-2,691,000	-1,334,000	X966,000
OATS.....	X63,000	X822,000	X1,166,000
BARLEY.....	X66,000	X1,003,000	X1,811,000

The visible supply of wheat in Canada on the same date was 40,590,000 bushels. This is 990,000 bushels less than two weeks before, and is 8,598,000 bushels less than a year before. The visible supply of oats was 4,352,000 bushels on the same date, which is 236,000 bushels less than two weeks before and is 4,914,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on November 21, two weeks before and a year before as follows:

	Nov. 21, 1914	Two weeks before	A year before
Chicago.....	1.15@1.15 1/2	1.15 1/2@1.16	91 @96

Future Grain Prices

Chicago grain futures closed on November 21, 1914, and two weeks before as follows:

WHEAT—December, \$1.15; May, \$1.21 1/2. Two weeks before, \$1.17 1/2 and \$1.24 1/2, respectively.

Winnipeg, Canada—Wheat—December, \$1.16 1/2; May, \$1.22 1/2. Two weeks before, December \$1.19 1/2, and May \$1.24 1/2.

Corn—December, 66 1/2c; May, 70 1/2c. Two weeks before, 70 1/2c and 73 1/2c.

Oats—December, 50 1/2c; May, 53 1/2c. Two weeks before, 50 1/2c and 54 1/2c, respectively.

Chicago Produce Market

Chicago, November 21, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday.....	45	75	65
Tuesday.....	62	45	55
Wednesday.....	35	25	60
Thursday.....	34	30	50
Friday.....	30	30	45
Saturday.....	20	37	50

Total, 6 days..... 226 238 325

Trade quiet, but fully steady at recently advanced prices. Receipts were light, reported at 20 cars, and there was sufficient demand to take care of all desirable offerings at full prices.

Sales reported were: Per bushel, Wisconsin, bulk—2 cars at 45c, 1 car at 47c, 2 cars at 48c, 2 cars at 50c; sacked—1 car showing rot at 45c, 1 car good at 48c, 1 car at 50c, 1 car at 52c. Minnesota—2 cars, 1 sacked, at 48c.

	November 21	Two weeks before	A year before

The Market Place

To Bring Seller and Buyer Together

There is an enormous demand in every part of the country, amongst farmers and people in towns and cities who are readers of this paper, for farm products that are grown in other parts of the country. Therefore, as an additional help to members of the Farmers Society of Equity, we have established this service TO BRING PRODUCERS AND CONSUMERS TOGETHER. Any member or clearing house of the society or any person who will become a member by now paying the entrance fee of \$2.50, may report his crops to sell or what he wants to buy, to the National Clearing House, F. S. E. and get this service FREE.

Rules To save unnecessary correspondence, the quantity, variety, grade, condition as regards packages or bulk, and price wanted should be given. If an article that may be marketed by parcel post, a delivered price should be named. Prospective buyers can state what they want and may name the price they will pay. TERMS—They may be as agreed upon. Mail shipments should always be cash with order. Honest transactions are imposed on every person who uses this department, and dishonesty or trickery will be exposed when reported. Always mention "The Market Place, Up-to-Date Farming," when writing.

THE NATIONAL CLEARING HOUSE, FARMERS SOCIETY OF EQUITY, INDIANAPOLIS, INDIANA. Through the advertisement that you placed for us in the Market Place we have sold some of our alfalfa seed and also had a good many inquiries. I think that it is a great feature, and all the different secretaries should use this space and let their wants be known, and also if they have anything to sell, as through this medium the buyers and sellers will be very quickly brought together.—Yours truly, A. E. Weber, Secretary, Geneva, Neb.

FOR SALE

APPLES—Mixed car of Jonathan, Rome Beauty, Wagner, Winesaps, and Spitz, at 50c per box, f. o. b. Myers Falls, Wash. Special grade. Good, sound apples, no worms; all three grades combined; good color. S. J. Ensminger, Kettle Falls, Wash.

APPLES—500 bushels of Nos. 1 and 2. Varieties are Stark, Baldwin, Golden Russets, Greenings, Wagners. Price \$2 per barrel. Glen Young, R. F. D. 3, Shelby, Mich.

POPCORN—First-class rice popcorn, 3 cents a pound in ear, in lots of 10 bushels or more. Fleete Geipert, R. 3, Miamisburg, O.

APPLES—Have a car of Baldwin and Northern Spy apples, barreled stock. Also upland grown Michigan potatoes. Melvin Seely, Bangor, Mich.

POTATOES AND HAY—C. L. Deemer, R. 1, Sumnerville, Pa.

SWEET POTATOES—Three car loads of good eating stock. J. W. Pitts, Pitts, Okla.

POTATOES—Early Ohio and Triumphs. E. F. Buttkie, Thompson, N. Dak.

Kans. Iowa and Neb. Prairie.....	6.00@14.00	6.00@14.00
Ills. and Wisc. Prairie.....	9.00@10.00	7.00@8.00

	November 21	Two weeks before	A year before
Rye.....	\$9.00@9.50	\$8.50@9.00
Oat.....	5.00@6.50	6.00@6.50
Wheat.....	6.00@6.50	6.00@6.50

BROOM CORN—Business remains quiet. No change noted.

	November 21	Two weeks before	A year before
Illinois, per ton.....	\$80@120	\$80@120	\$150@160
Western.....	80@90	80@90	110@160

While the Chicago quotations on broom corn do not show any change from two weeks before, the price that can be obtained has materially advanced.

EGGS—The receipts at Chicago this year compared with former years follow:

April 1, 1914, to November 21, 1914, 2,788,989 cases.	
April 1, 1913, to November 22, 1913, 2,851,152 cases.	
April 1, 1912, to November 23, 1912, 2,735,961 cases.	
April 1, 1911, to November 25, 1911, 2,588,974 cases.	

A very firm feeling exists for fine fresh eggs, while refrigerator eggs are easy.

Fresh Firsts.....	29 @30
Ordinary Firsts.....	27 @28
Miscellaneous, cases included.....	20 @29 1/2
Cases returned.....	19 1/2@29
Checks, good sound.....	14 @15
Candled higher.....	
Dirty, good.....	17 @18

Candled stock bring higher prices. Refrigerator eggs are easier. The demand is only moderate and the offerings are fairly liberal. April extras, charges paid, salable at 23@23 1/2c. Firsts nominally 21 1/2@22 1/2c, storage paid.

A year before ordinary firsts were quoted at 31@33c, fresh firsts 34@35c a dozen.

APPLES—No new feature appeared. There is, in fact, not much feature to the market. Apples that are No. 1 quality rule steady. They have a fair sale. Common are slow. Peddlers have been able to do little the first few days. It has been too cold. This has made bulk fruit stagnant and there has been some accumulation. Such cars have had to be protected to save them from freezing. Trade in box apples moderate. They are plentiful. Some prices follow:

Baldwins, \$2.00@2.25;	Ben Davis, \$1.50@1.75;	Whitesaps, \$2.50@2.75;	Kings, \$2.50@2.75;	Jonathans, fine, \$3.50@4.00;	Grimes Golden, \$3.00@3.25;	Greenings, \$2.50@2.75;	Northern Spies, \$2.25@2.50.
------------------------	-------------------------	-------------------------	---------------------	-------------------------------	-----------------------------	-------------------------	------------------------------

All per barrel. Some extra fancy bring a shade over these quotations, while common to poor bring less.

COAL FOR ALL

We mine the best domestic coal in Colorado. Satisfaction guaranteed. Write us for prices.

Farmers' Coal Company
Colorado Springs, Colo.

WANTED TO BUY

CORN—In ear lots. C. E. Perry, Secretary, Warrensburg, Mo.

APPLES—Prices on good apples in barrels by the car load. J. M. Fyler, R. 1, Platte, S. D.

APPLES—Good stock that keep well. In bulk or boxes. Quote prices. May be able to sell one or two car loads. A. C. Hecht, R. F. D. 3, Rule, Tex.

POTATOES, APPLES AND CABBAGE—In mixed car loads. Lineberger Bros., Lakeland, Fla.

CORN AND OATS—Also middling bran and gluten. John Dorst, Secretary, Arpin, Wis.

POTATOES—A car or more of screened potatoes. C. C. Briggs, for Des Moines Trades and Labor Union, 2701 Hickman Avenue, Des Moines, Ia.

CLOVER SEED—Quote price. Dell Upton, Leon, W. Va.

HAY, APPLES, POTATOES AND CORN—We wish to buy these in straight or mixed cars and would like to hear from parties who can load on the L. & N. railroad. Would also like to hear from locals in Tennessee that have butter to ship each week. W. B. Vandivier, Secretary, Bay Minette, Ala.

APPLES—One or two carloads of good winter apples. D. Fluth, Orange City, Iowa.

APPLES—Workers' Co-operative Association, Anderson, Ind., wants to buy a car of 500 bushels of apples, any standard kinds except Ben Davis. Will take sound tree run. P. A. Lyons, Secretary.

POULTRY, BUTTER AND EGGS—The Producers

Get Your Cream Separator NOW

\$2 DOWN

Only One Year To Pay

Here is the opportunity you have been waiting for—a chance to get one of these big-capacity, light-running, easy-cleaning, close-skimming New Butterfly Cream Separators without taking the money out of your pocket.

By paying only \$2 down, you can get the biggest machine we make, use it 30 days free, then if you decide to keep it pay us the rest of our low factory-to-farm price (only \$24 and up) in small, easy installments. You can make these payments monthly out of the extra cream profits which the machine will save for you. You buy direct from the manufacturer and save half. You try the machine 30 days on your own farm before you decide to keep it. You get a signed lifetime guarantee. You have the benefit of this great labor-saving machine while it is earning its own cost and more. You don't risk a single penny. We pay the freight both ways if the separator fails to please you. Get your separator NOW at factory prices and on terms so easy you won't feel the cost at all.

New Butterfly Cream Separators

will make you \$10 to \$15 a year more profit from every cow you own. They are handsome, high-grade, durable machines. The most modern and convenient separator you can buy. No other separator costs more to make, has so many patented improvements or gives you as much value for your money. We will prove this on your own farm, or no sale. Thousands are in daily use all over the United States. Read the letter at right.

30 Days' Free Trial
Lifetime Guarantee

Fill out the coupon below—mail it to us right away for free catalog folder. Get our big special offer on the five sizes of machines we make, so you can pick out the one that exactly suits your requirements. We will ship it to you on our easy payment terms of only \$2 down and let you try it 30 days on your own farm. When the 30 days are up, if for any reason you are not pleased—if you don't prefer the New Butterfly to any other separator you ever saw or used—just return the machine to us. We will pay the freight both ways and refund your first payment. You won't be out a single penny.

Every New Butterfly Separator is guaranteed against defects in material and workmanship, regardless of how many years you have used it. No other separator manufacturer will give you this signed lifetime guarantee.

UP-TO-DATE FARMING

17th Year

December Fifteenth 1914

Number 24

FRANK BOWERS

Does This Remind You?

The Mission of this paper is to give farmers a balanced education---as much on marketing as on producing---and to help them to get more money for their crops

All Aboard for the Great World's Fairs

Panama-Pacific International Exposition, San Francisco Panama-California Exposition, San Diego

Up-to-Date Farming intends to send 300 or more subscribers to the two World's Fairs and pay the expense of the trip going and return. You—yes you—may as well be one to go. These are the most attractive and greatest World's Fairs ever held. You may go to one or both. Here is a life-time opportunity

California Calls—You May Realize the Desire of a Lifetime

Millions of people throughout the world are today looking forward to a visit to San Francisco's Golden Gate and San Diego's beautiful city. We are sure practically every subscriber wants to go. We have a plan that will pay your way there and back. No lottery—no chance—no contest. If you want to go there is no reason why you can not at our expense. Many of our readers have arranged already to go by our plan.

The Golden West—The Wonderful Rockies—All in This Trip

Are you counted among those whose great desire has been to travel across the golden west, over the awe-inspiring Rocky Mountains, through the sun-kissed valleys of California, and visit the magic cities of the Pacific coast states? If you have had this desire the opportunity to gratify it is now presented to you almost regardless of your financial condition. Opportunity is knocking at your door now. Are you, then, going to be one of those that UP-TO-DATE FARMING will send to California in 1915, or are you going to stay at home because you will not send the attached coupon and then do the small favors that we will ask of you?

A Fairy-land to Enchant You

The great exposition that will open in San Francisco next February will commemorate the completion of the Panama Canal, which has been the dream of nations for centuries. To do this and to make a lasting impression on the minds of all the people who visit the exposition, and to make the event worthy of the highest place in the annals of history, the combined intelligence and genius of the best artists, architects and artisans of the world will be expressed in the created features of the exposition. There will be portrayed all that the world's famous artists and modern science can do in creating; all that skilled gardeners and the wonderful California climate can do in decorating with flowers, fruit and trees. Crystal palaces, jeweled towers, domes, minarets, courts, colonnades, archways, statuary, pergolas, fountains reflecting rainbows, etc. A repository of all the great accomplishments of nearly all nations in art, literature, and industry down to date will be represented. A fairyland to please and a school to instruct such as was never possible to see and attend before. Its beauty, once seen, must live in memory as long as memory itself endures, and to the receptive mind its educational and helpful features will be worth hundreds of dollars to the individual almost regardless of his business or condition in life.

Visit Mexico

San Diego's Panama-California Exposition is unique in all the World's Fairs of the past. The most beautiful buildings, the most wonderful flowers, fruits, vegetables. Full size farms are shown in cultivation.

A history of California and the west shown in full realization of the times illustrated. Don't miss San Diego. The climate is perpetual summer, but always an absence of excessive heat. It is in the midst of the section of California famous for its flowers, oranges and all semi-tropical features that northern people long to witness. It is 500 miles south of San Francisco. This trip through the most wonderful scenery, the most remarkable agriculture, of fruits, grain, seeds and flowers, and the magic cities, will alone be worth all the cost of the trip. From San Diego it is only a short trip—a few miles—to the borders of Mexico. It will be fine to visit Mexico.

Plan to Visit Both Expositions This Summer—Write Us Today

We can send you to both of these expositions if you make up your mind now that you want to go and send the coupon below. You should not delay in making sure of your reservations. It matters not where you live. When we hear from you we will send our "Pacific Coast Mileage Book," adapted from your place, whether you live in Maine or Colorado or Oregon or Florida.

You May Start on Your Trip Any Day You Select

This offer is backed by a \$150,000 corporation and everything will be carried out as represented. You can go on this trip any time after the fairs open until they close, at our expense. Send the blank below for full details of our plan and the mileage book.

Balanced Rations

Bad Fairies

Of all the bad fairies who meddle with life, The worst are a mischievous elf and his wife. So whatever you're doing, beware of these two; They are "Haven't Got Time" and "I Guess It Will Do."

—St. Nicholas.

We wish you a merry Christmas. a"

With the next issue we begin another year's journey.

It takes a healthy neighborhood to make a doctor look sick.

UP-TO-DATE FARMING will be 18 years old with the coming of the new year.

The cotton farmers are seeking a marketing plan that is "all wool and a yard wide."

A mother's club should accomplish much, for she has worked great reforms with just a switch.

Every long-headed farmer will attend the short course at the state farm college if he can possibly arrange it.

Farmers don't like war, but those who are holding wheat feel conflicting emotions when a peace rumor sends prices down.

Don't waste the wood ashes. They are better than lime on acid soils. Leaving them out in the weather wastes them.

The average farmer isn't bothered half so much to know what to do, as he is how to be able to do what he already knows.

The horse that wears out the breeching faster than the collar has no place in progressive agriculture, and the same principle is applicable to men.

The Wisconsin Agricultural College is teaching all dairy students the operation of a community laundry, to run in connection with the co-operative creameries.

If you want an example of successful community co-operation set yourself about making it. This is another one of the many good things which come about by going ahead with it.

There are many communities which have no rural telephone system, but there are very few but what should have one. Farmers' co-operative telephone companies are uniformly successful.

About the worst foot-and-mouth disease we know is the gossip who runs about talking about the neighbors. People having this species of the disease ought to be quarantined. We don't suppose it would do to shoot 'em.

When planning your next year's crops, don't make the mistake of going in too heavily on a new crop not grown on your farm previously, or a new variety, unless it has proven successful in the neighborhood. Test things out.

With plenty of lard for doughnuts in the jar, plenty of corn in the bin, plenty of tomatoes and apples in the cellar, plenty of chickens in the poultry house, plenty of bacon in the smoke house and plenty of rabbits in the woods, it surely does seem that we should have a merry Christmas.

Building the Corner Stone

AGRICULTURAL ORGANIZATION CAN BE MOST SUBSTANTIAL WHEN PROPERLY ARRANGED

What Others Say and What We Think of It

"It is pretty hard for one who is not on the ground to tell the other fellow what to do."—The Oklahoma Farmer-Stockman. One is up in the air, so to speak.

"It is said that they are holding back 100,000,000 bushels of wheat in Kansas for an advance in price. What's the matter with Kansas?"—The Bee Hive. Evidently wants what belongs to her.

"What we now need is a rural credit system by which the farmers' land, stock, 'agricultural paper' and character may be mobilized."—The Progressive Farmer. That depends on who is to have command of this great mobilized financial force.

"City methods are seldom adapted to rural education, but it's hard to make the city folks understand this."—Orange Judd Farmer. When they see how quick some country boys take up with them they perhaps think their methods are very readily adopted by the ruralites.

"The question of getting farm products from the producer to the consumer at a cost which will do justice to the producer and yet levy no hardship on the consumer is without doubt the largest problem in American agriculture."—The Farmer. You are right. It is also the one given the least attention by all our agricultural authorities.

"Practical co-operation among farmers in this country is a comparatively new thing and rather rare as yet. Almost every other civilized country has made more progress along this line than we."—Southern Farm Journal. And yet, once we get fairly started along the right track we will make more progress in five years than Europe has in fifty. It's a habit with us Americans. But sometimes we're too slow getting started.

"Only the man who is willing to stick to one farm and work out the various systems of crop rotation, to secure and improve good breeds of live stock and stick to his bush through thick and thin, for season after season, can accumulate enough of the world's goods to own land of his own."—The Farmer and Stockman. Exactly so, provided the man and the farm are suited to each other. Misfit farmers can not succeed, and sometimes a change is beneficial to the farm, the tenant and the landlord.

"Usually the country schoolma'am is a young girl who is teaching to qualify for a better position for better pay in the city schools."—Wallace's Farmer. No, not usually, but occasionally. Usually she is teaching to buy a piano or other furnishings for her housekeeping days, which she hopes are soon to come to hand. As the genial old "prof" where we last attended high school said to the seniors on graduation: "Girls should teach school until they get married, to learn how to manage children; but for the sake of the schools, get married as soon as you can." And usually they do.

Quantity and Price

IT IS GRATIFYING to see that the agricultural schools and experiment stations are beginning to note the relation between yield and price of agricultural products. Heretofore this has been entirely ignored. Farmers were taught but one thing and that was how to produce, and they were assured that the more they produced the greater would be the cash returns. They disregarded the fact that extra big crops often brought less money than smaller crops produced in other years; that the price depended upon the surplus, and the greater the surplus the lower the price. We have done our best to get agricultural instructors to teach this truth, and while they were urging increased production and showing how it could be done, that they would also find an increased demand and maintain the price.

Prof. Eugene Davenport of the Illinois Experiment Station seems to have awakened to the importance of that matter, and has issued a circular on "The Relation between Yields and Prices." We have not yet seen the circular, but its title indicates that the schools and experiment stations are beginning to realize that there are two sides to farming.

It matters little how large the crops. The larger the better, provided there

is a demand for the surplus at remunerative prices. The present terrible condition of war in Europe promises to help the United States so far as the demand is concerned. American horses are finding an almost insuppliable market, as are meats, hides, etc. So is grain and many lines of manufactured stuff. The exports during November were \$63,000,000 greater than those of November a year ago. These exports include more than 30,000,000 bushels of wheat, and we note the following special contracts: Three million pairs of soldiers' shoes, \$7,000,000 worth of harness, \$3,000,000 worth of leather, 100,000 fur-lined overcoats, 1,000,000 suits of woolen underclothes, 250,000 woolen sweaters, 500,000 shaving brushes, 100,000 tons of barbed wire, \$2,000,000 worth of machine lathes for making arms and projectiles, \$1,000,000 worth of solid rubber tires for auto trucks, \$3,000,000 worth of autos and tractors, and about \$20,000,000 worth of other war supplies. All this means increased employment for our people and increased demand for farm crops of almost all kinds. Farmers have cause to be encouraged, and we are glad our schools are beginning to study the relation between quantity, demand and price. Give American farmers profitable demand and there need be no fear concerning the quantity.

EDITORIAL

American Farming—What It Does and Needs

IN HIS current annual report Secretary Houston of the Department of Agriculture gives a great deal of important information and discusses many questions of vital concern to the American people.

Among other things, we are told that in this country there are no less than 925,000,000 acres of land suitable for farming, but less than half of it, only about 400,000,000 acres, is in cultivation, and in spite of our boasted population we average only about thirty-one people to the square mile in Nevada to 508 in Rhode Island. So there is room for many more homes in this country. One trouble is that a great deal of the unoccupied land is held in government reserves in the west, which the secretary wishes to be modified in such a way as to make it more available for homes.

It is also stated that while American farmers do not produce as much per acre as most European farmers do, they produce more per individual—from two to six times as much. This is because our farmers cultivate more acres to the individual.

A great change is noted in many lines of production. Dairying, for instance, has risen in a few years from a minor source of rural income to one of great importance, the annual product now being more than one and a half billion pounds of butter, a half billion pounds of condensed milk, and a third of a billion pounds of cheese, the whole having an approximate value of \$600,000,000. The production of orchard fruits exceeds 216,000,000 bushels a year, with a value of more than \$140,000,000. The yearly value of the vegetables produced exceeds \$400,000,000. The production of hay and forage is 100,000,000 tons, and is worth more than \$800,000,000. The poultry product has reached a point equalling half the normal value of the cotton crop.

The wheat crop of 1914 was about 892,000,000 bushels, the greatest ever produced in this country, and the crops of oats, barley, rye, potatoes, tobacco and hay are reported exceptionally large, while the cotton crop is the second largest ever produced. The apple crop, estimated at 259,000,000 bushels, is the greatest ever harvested. The average yield per acre of all the staple crops is estimated at nearly 10 per cent greater than that of last year,

and all except corn, oats and flax seed was greater than the ten-year average.

But in cattle, sheep and hogs there has been a marked decline. Since the last census, 1909, the number of cattle has fallen from 50,000,000 to 41,000,000; sheep from 61,000,000 to 52,000,000; hogs from 63,000,000 to 58,000,000. Much has been said of the stock raised on western grazing lands, but this has never reached its possibilities. It seems that in 1905 there was only one animal to 81 acres, but in 1913 the average was one animal to 51 acres. At this rate, however, the 29,000 stock raisers to whom these lands are rented have 1,600,000 cattle and horses with their calves and colts, and 7,600,000 sheep and goats with their lambs and kids. It is evident that there is great inducement for increased production of live stock on the farms.

There are some points which Secretary Houston makes specially emphatic. One is the marketing of farm products. He says:

A constructive agricultural program must of necessity contemplate distribution as well as production, and, vital and urgent as are the direct problems of production, even more important in a sense and more immediately pressing are the problems of distribution and marketing.

But the secretary looks at this question hopefully, for he says there is now a record of more than 8,500 marketing associations, 2,700 co-operative and farmers' elevators, 2,500 co-operative and farmers' creameries, and more than 1,000 co-operative fruit and produce associations.

Speaking of rural credits, the secretary says:

There seems to be no emergency which requires or justifies government assistance to the farmers directly through the use of the government's cash or the government's credit. The American farmer is sturdy, independent and self-reliant. He is not in the condition of serfdom or semi-serfdom in which were some of the European peoples to whom government aid was extended in one form or another during the last century.

He argues that the Federal reserve act makes paper arising out of agricultural transactions eligible for discount under a longer maturing period than other forms of paper, and also permits national banks not situated in central reserve cities to lend on improved and unincumbered farm lands for any period up to five years. The secretary sees no need of the land bond speculating security schemes.

Young People's Clubs

WE NOTE with pleasure, and also with regret, the seeming interest that is being taken in the formation of clubs for the young people—boys' corn clubs, boys' apple clubs, girls' canning clubs, etc. The departments of agriculture, national and state, and the agricultural schools, colleges and universities, are doing everything in their power to encourage the formation of these clubs. We are more than glad of everything that affords the young people increased opportunities for advancement, and these clubs could be made effective stepping stones leading upward, but unfortunately those who seek their organization see but one side to farming. This boy club organization effort reminds us forcibly of the propositions with which the papers were filled only a short time ago. Almost every monopolistic institution became a missionary in a "heathen" land to teach American farmers how to produce more—to raise not better or more profitable, but greater crops. Large sums of money were appropriated by these institutions to pay for this "mis-

sionary" work among the farmers. But farmers are not fools. They can see a little way at least into the future, and they can read motives and understand effects. They welcomed these apparently liberal offers for the promotion of agriculture, but they kept their eyes open to the fact that there is another side to farming, that the profit is in the selling rather than in the production, and this was the feature the "givers of gifts," the crop-buying interests, did not want studied.

There is not so much said of that "extension" work now as there used to be. The effort has turned to the formation of clubs among the young, and, as we have said, the agricultural schools are directing their efforts in that direction. These clubs are attractive, and they could easily be made effective, but they will not be. Nothing is taught or proposed but production. The more there is produced the more there will be on the market and the greater the opportunity for speculation. The same interests are behind this effort that were behind the other, and the power of money tempts the colleges and the press. A deep thinker who has studied this question as few others have, and who has proven himself an unwavering and unselfish friend of agriculture, writes us:

I am certain that our agricultural institutions are completely subservient to the commercial interests that want the crops increased without limit, but not a thing done that will make the farmers independent in handling them; and in retaining the same

commercial and gambling interests use their influence and power to get state legislatures and our national Congress to increase the money appropriations to the agricultural institutions.

The above quotation was not written for publication, and the fact that we publish it will bring imprecations from both of these classes, but the only way to make effective argument is to speak the truth unflinchingly. There are hidden purposes in so many of these efforts, and farmers are cruelly deceived. First teach the farmers how to make a profitable use of their stuff, how to find a profitable market for the apples and potatoes and other good crops of this year, and then our hat goes into the ring for increased production—for all sorts of extension work and boys' and girls' clubs—for everything that will educate both old and young and make farming more successful, but we can't assist what builds only on the buyers' side. We are right in that, aren't we, farmers?

Favoring and Protecting Farmers

THAT the big institutions control government there can be very little doubt. By "big institutions" we mean those concerns that are organized and co-operate not in the interest of any productive industry, but to work schemes that bring great profits but are of no benefit to the general public. Agriculture is now in many ways the subject of these schemes and plans, because it is about the only great industry that is not already the completely controlled victim of them.

For a few years eyes have been turned toward farming that never looked in that direction before. Great business concerns have offered millions to "help" the farmers. Demonstration trains have tracked the country over, and the agricultural schools have received support from sources to which they never looked before. All these efforts, though, have pointed in one direction—increased production. There must be more stuff for the price makers and option dealers to gamble in, more freight for the railroads to haul, and a greater surplus for dealers to speculate in. The question of price or income to the farmers never entered into the schemes.

A little later came the campaign for rural credits. Farmers must have a better chance to borrow money. Laws must be devised to give them easier terms and lower interest, but when the mask is torn off it is seen that the money lenders wish to create a demand for their surplus and at the same time get a lien for speculative purposes on the farms and homes of the people. The real benefits are to be reaped by those who already have the power to accumulate and control the money and not by the farmers. The farmers are to be the ultimate victims.

And when it comes to protection the farm industries are not in it. All manufacturers must be saved from foreign competition, but the American farmers must be urged in every way to produce more and more and the

doors of the world must be opened so as to freely pour their surplus into our markets. This was done in part by enactments in 1909 when the Republicans were in power, and was completed by the recent Congress with the Democrats in power. It must not be forgotten that President Taft's most strenuous measure was the Canadian reciprocity bill that was enacted by Congress and signed by Mr. Taft, and from the ruinous effects of which we were saved by its rejection by Canada. We mention this to show how insincere the parties are when they throw stones at each other because of tariff legislation, at least so far as farm products are concerned. To show the effect of these measures on the farmers we may remind the reader that within twelve hours after the defeat of reciprocity by Canada the price of American wheat rose 3 cents in Chicago, 6 cents in Minneapolis and 8 cents in Duluth, and barley rose 8 cents. Had Canada ratified the reciprocity measure those prices would have remained down and would have gone lower. Under more recently enacted laws crop products, cattle, hides, meat and other commodities, are coming free across the line to sell side by side with the products of our farms. We fully agree with James M. Pierce when he says editorially in the Iowa Homestead:

I am a firm believer in giving the farmer the protection to which he is justly and rightly entitled, making it impossible for the products of our \$100 and \$200 per acre land to have to submit to competition with the products of lands which sell for a mere song, where labor is cheap and where living conditions are so poor as to be in no manner comparable with ours. I have seen men work in South America for 40 cents a day and women working for 30 cents a day. I have seen cattle by the thousands (in parts of South America) that were in the best of condition without having received a bite of grain from calfhood, the rich wild grasses of the warmer portions of the country making it wholly unnecessary to feed grain of any kind, and land selling at from \$5 to \$10 per acre. Protect our American farmers as they deserve to be protected against such cheap living as may be found in many foreign countries. Safeguard our farmers, and there will be neither outbreaks of the dreaded foot-and-mouth disease nor unfair competition with the cheap labor of other lands. Ignore the farmer's welfare, subject him to unjust discrimination, and the woe and misery and want which will eventually stalk through this fair land of ours could hardly be exaggerated.

Not Always So

Gibby—I tell you, it is no use to try. Nobody can fool my wife.
Nibby—That may be so now, but it wasn't that way before she was married, was it?

That Would Do No Good

Mother—Now, Tommy, don't let me see you throwing any more stones.
Tommy—But what'll I do when the other fellow throws 'em?
Mother—Come and tell me.
Tommy—Tell you! You couldn't hit the barn.

Prepare for More Prosperity

It's coming—all signs point to it—everybody says so. "What?" Why, big prosperity! Higher prices another year than we've ever had. Get ready. Buy the new separator, or incubator, or manure spreader, new seeds—and don't forget the comforts of the home. Before you buy consult the advertising columns of UP-TO-DATE.

Our Advertisers Are Guaranteed

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

December Fifteenth Feature Article

The Farm Kitchen as a Workshop

By Anna Barrows

THE KITCHEN is the workshop of the home, for the greater part of the housework is carried on there. As in any other well-ordered workshop, it is essential that the kitchen be conveniently located with reference to the other rooms and conveniently built, that the necessary equipment be provided and so arranged that the various tasks of the kitchen may be performed thoroughly and rapidly and at the same time with the least expenditure of energy on the part of the housewife, and that suitable provision be made to secure the personal comfort and well-being of the workers.

According to the census of 1910 there are in the United States over 6,000,000 farms. On each of these there is presumably a farmhouse and a kitchen. In each of these 6,000,000 farm kitchens at least one woman is working. It is safe to say that in fully one-third of them the housekeeper has the assistance of relatives or hired helpers. A conservative estimate indicates, therefore, that there are 8,000,000 women working in the farm kitchens of the country, most of them many hours a day.

Improvement in the arrangement of the farm kitchen should, therefore, result in saving the energies of 8,000,000 people and make their work less heavy and more enjoyable. The kitchen has been, and too often is at present, living room, dining room, wash room, laundry, entry from outdoors, and passageway to other parts of the house, as well as cook room. Even in houses where it is possible to use the kitchen for the preparation of food only, it is often far too large and is used for work which might better be done elsewhere.

While the kitchen is the center and workshop of the home, its work also extends more or less to other parts of the house. In planning or building a home, it is of greatest importance that the relation of the kitchen to the other rooms be considered. The kitchen work is most closely associated with the pantry, dining room, and the store room, cellar, or woodshed. These should be located as near and conveniently as possible to the kitchen, so that the journeys which must be made so often between these rooms will be as short as possible, thus saving many steps and a great amount of energy.

Other parts of the house which are closely related to the kitchen, although to a less extent, are the entry, or other place where wraps are left; the toilet, where hands are washed; the living room, and the bed rooms, where children must frequently be cared for. Wherever possible these rooms should be located within easy access of the kitchen.

The pantry should be so located that it is convenient to both kitchen and

PLAN TO SAVE STEPS FOR A WEARY MOTHER

dining room, which means that it must be near or adjacent to both. To meet the latter condition it is often located between the dining room and the kitchen, and is then designed to be used both for preparation of food and for the storage of food, food supplies, china, table linen, etc. If it is narrow in proportion to its length and located lengthwise between the two rooms, it does not very appreciably increase the distance which must be traveled from the kitchen to the dining room.

Space should be provided in the kitchen and within easy access of the pantry and dining room for the work table, sink, stove, and ice box. It is also desirable that provision be made for filling the ice box either from the outside of the house or the entry, so that the person filling it will not be obliged to enter the kitchen. This will save much mopping and cleaning. Refrigerators can be purchased which are fitted with a door on the side or back of the ice chamber, and an opening corresponding to this door may be cut in the wall of the house and the chest filled from outside. This opening should be fitted with a hinged window or door and provided in winter with a heavy screen, so that it can be left open and the ice chest kept cold for the storage of food. When this is done the window frame should be tightly joined to the refrigerator, so that cold air may not come into the kitchen as well.

The doors between the kitchen, dining room and pantry should be made to swing both ways, so that they may easily be opened when both hands are full. Such doors should have a glass panel so that persons approaching the door from opposite directions can see each other and avoid colliding, and they should also be provided with some form of door check so that they will remain wide open when so desired. A hook and staple will answer the purpose.

In determining the size of the kitchen the housekeeper must, first of all, make a decision with regard to the uses to which the kitchen is to be put. If the meals are eaten in the kitchen a larger room is required than if it is used for cooking only. The location and character of the farm, as well as the size of the family, are factors in determining the size of the kitchen, owing to the provision which must be made for storage in many cases.

All surfaces in the kitchen, whether on floor, walls or ceiling, should as far as possible be plain and free from cracks, ridges, and moldings, for such places not only collect dust and dirt and thus increase the difficulty of keeping a room clean, but also may harbor ants, roaches and other pests.

Floor coverings, such as carpets and matings, which hold dust and dirt, are unsuited to the kitchen. Oilcloth is cheap and easily cleaned, but wears out quickly. Linoleum, a material made of cork or wood pulp pressed in linseed oil, although the first cost is large, as compared with oilcloth or paint, is relatively durable, comfortable for the feet, and easily kept clean. A soft brush or dust mop will keep a floor in better condition than a broom and render mopping less frequently necessary.

The housekeeper has to spend many hours a day in the kitchen, and sufficient light and ventilation are necessary not only to conserve her health, but to enable her to perform her work most efficiently. The kitchen should, therefore, have a generous number of windows, which provide both light and ventilation. In general, the higher the windows the more effective they are for providing light and ventilation. The air of the room rises as it becomes heated and to let it escape there should be at least one opening close to the ceiling.

In a room where cooking is done there can hardly be too many windows. Glass transoms over the doors may be made to furnish both light and ventilation in such places.

In planning or remodeling the kitchen, the work table, ice box (or other place for the storage of food supplies), dish cupboard, stove, sink, and set tubs (if any) should be so located that the tasks in the kitchen may be performed most conveniently and with the least expenditure of time and energy, which means they must be near together, but must not interfere with free passage from one to the other. Upon the location of the last three in particular depends to a certain extent that of the chimney and water pipes.

The greater part of the work done in the kitchen is that associated with the processes of preparation and service of the food and of cleaning up. These processes consist in collecting utensils which are to be used at the work table; gathering the supplies

from cellar, pantry or ice box; preliminary operations at table or sink, such as mixing, washing vegetables and fruits or meat, cleaning poultry or fish, etc.; cooking; and disposal of the food on the dining table or else in pantry or ice box for future use. The process of cleaning up involves disposal of surplus food, putting away of equipment not requiring cleaning, collection and disposal of waste and soiled dishes, washing dishes, and the restoring to their proper places of the clean dishes and cleaning utensils.

In performing these various tasks certain distances must be traveled, some of them much oftener than others. For instance, it is necessary to go from the ice box to the cooking table or pantry, from cooking table or pantry to the stove or sink, and in some houses from the pantry to the cooking table very many times. It is evident from this that to shorten the distances traveled the ice box, table, sink and stove should be placed close together and at the same time in close proximity to the dining room and pantry. Where there is no dining room these should be placed together near the pantry in one end of the kitchen, which should be used strictly for the preparation of the food, the other part of the room being reserved for eating.

The size of the family and of the kitchen must determine the size of the sink, but a short sink with ample table and shelf room near it may be more convenient than a long sink. Two smaller sinks, one for the table dishes near the dining room and the other for general use in the kitchen, are very convenient.

The double sinks, with one basin for washing and another for draining dishes, are very convenient, but unfortunately they are relatively expensive. A small sink with a rubber stopper for its escape pipe may be used as a dish pan when two sinks are used.

To sum it all up, in planning a new home or remodeling an old one it should always be borne in mind that the placing of the stove, sink, and work table in such a way as to secure the advantages discussed in the preceding pages will save the housekeeper many steps in the tasks of the kitchen. Time and energy will also be saved if the shelves, cupboards, and drawers are located near the place where the supplies or equipment which they are to contain are to be used, and they will be even more convenient if they are so planned that their contents may be easily and quickly removed or replaced. In selecting the equipment only that which is most convenient and durable should be purchased. As in any well-regulated workshop, all the equipment necessary for the convenience of the worker should be supplied, but that equipment should be installed first of all which will be used most often, and it should be of such a character and so located that it will result in the greatest saving of labor.

THE FARM *and* ITS PROBLEMS

of Producing and Marketing

Success With Spraying

Being Well Prepared Is
Half the Battle Won

SUCCESSFUL spraying depends upon several important things. In the first place be sure to have an equipment that will enable you to get your spraying done in a reasonable length of time. The spraying period, with the exception of the treatment for San Jose scale, lasts but a few days, and the equipment should be sufficient to enable one to cover his orchard in less time than that on account of the fact that bad weather may interfere with the work. For a small orchard of seven or eight acres a hand-power outfit that will give one man all he wants to do at steady pumping will suffice.

On larger orchards a good power equipment should be procured.

Before the time comes for actual spraying have everything ready and properly—the pump taken apart, cleaned, the valves tested and put back together again in perfect condition. If a new outfit is to be secured have it shipped a few weeks before actual spraying time begins, so that a thorough test may be made and the owner become accustomed to handling the tested beforehand. Have the outfit all in order and be sure that it works

grain of any kind. The combined harvester cuts, threshes and sacks the grain in one operation. I have an eighteen-foot combined harvester with a thirty-horsepower motor mounted on same to drive all machinery. Twenty horses are used to pull the machine. I average forty acres per day at the cost of about 85 cents per acre.

Twenty head of horses at 75 cents each per day; distillate for motor, \$2.25 per day; cylinder oil for motor, 50 cents per day; one separator man, \$6 per day; one man to drive horses, \$4 per day; one man to tend header, \$3 per day, and one man to sew sacks, \$4 per day.

This year I harvested 8,500 bushels of winter wheat, 9,000 bushels of blue stem spring wheat and 3,400 bushels of oats, all on my own farm, and did not pay out one cent for labor, as I have horses enough and myself and my boys do all the work.

Farm land is selling here from \$35 to \$55 per acre, according to improvements and location. We raise all kinds of grains, vegetables, fruits and alfalfa. —A. B. Schwab, Harrington, Wash.

Electrically Lighted Farm Homes

machine before spraying time comes. Be sure to have on hand a sufficient amount of material for making all the mixtures, and it is better to have too much of these than to have to stop the machinery while waiting for some one to go to town for a new supply. Be sure that the right formulas are used, and be careful to mix your spraying materials exactly as advised. Spraying is an important business and will justify very careful study and preparation. Secure all the literature possible on the matter from the experiment station of the national Department of Agriculture and from manufacturers of spraying materials and study them thoroughly. Get in correspondence with the horticultural man at your state experiment station and you will find him eager to take an interest in what you are doing and help you to make it a success. Do not lose sight of the fact that spraying is a profitable thing to do, if done right, as has been proven innumerable times. But unless the work is done as it should be, both time and money are liable to be wasted.

THE IMPROVEMENTS of the age are not all for the dwellers in cities. The white lights do not illuminate the streets, parks and homes of the town only. Electricity is fast becoming one of the most popular means of lighting the houses, barns and yards of the farms. The advantages are unmistakable. Convenience, cleanliness, brilliancy, safety, all these and more are in the favor of the best of all artificial lighting systems.

Nowadays inventive ability and commercial ambition makes nearly all things possible. Electric lights were too expensive for the farm home in years gone by. But today it is different. The cost of the equipment and its operation has been very greatly reduced. Moreover, the small gasoline engine has become a household necessity anyhow. All homes should have one, and homes that do have them should have also the electric light system now manufactured for farmers.

Walking along the street of one of our largest cities the other day, I noticed a number of interested people gathered in front of a window. Stopping to see the attraction, I saw a small gasoline engine manufacturing electricity, storing it in batteries, and illuminating sixty incandescent lamps. The mechanism was simple, the results

From the Sickle Into the Sack
I HAVE never seen any letters in UP-TO-DATE FARMING from eastern Washington, so I will tell how I harvest my wheat crop.

I find the combined harvester the cheapest and easiest way to harvest

FROM THE SICKLE TO THE SACK ON THE FARM OF A. B. SCHWAB, HARRINGTON, WASH.

were perfect. Thousands of farm homes have installed electric lighting outfits. Thousands more will do so. It adds to the pleasure of living and makes country life more attractive. And the best is none too good, you know.

This paper, as all our old readers know, is constantly preaching the value of co-operation. Here is a good opportunity to profit by it. If three or four farmers near the same town can arrange to install electric light systems at about the same time, let them get together. They will have an attractive proposition to make to a dealer, and can effect a saving by ordering together from the same firm.

Not a Bit of Danger

"Mr. Neal, do you think I could safely ask your daughter to marry me?"
"I am sure you could without the least bit of danger, for she told me yesterday she would not marry you if you were the last man on earth."

Lowest Prices Ever Made on World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing, Lasts as Long as Building Stands
Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end. Its cost per square is the lowest ever made. It has no upkeep cost. Always beautiful in appearance. Reducing cost of fire insurance.

EDWARDS Exclusive Tightcote Process

Makes Rust-Proof Roofing. The zinc spelter becomes practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingle, Grip-Lock Roofing, Pressed Standing Seam or Roll Roofing, Ceiling, Siding, etc., is dipped in a bath of molten zinc, one at a time after the metal has been stamped and resquared. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to the weather.

How To Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with your finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking, Protects Nail Holes. Roof never warps, buckles or breaks—nails are driven through the under layer not exposed to weather—cannot rust. No special tools or experience needed to lay EDWARDS Galvanized Steel Roofing; anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles

Cost Less, Outwear 3 Ordinary Roofs and are your joy and pride forever. No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Steel Roofing exactly suited to your needs.

GARAGE \$49.50

Lowest prices ever made on Ready-Made Fire-Proof Steel Garages. Set up any place. Postal brings illustrated 64-page catalog free.

FREIGHT PREPAID Lowest Factory Prices

Greatest roofing proposition ever made. We sell direct to you and save you all in-between dealers' profits.

FREE Roofing Book

No matter what your building is, we simply ask the right to prove to you that our prices are lowest ever made for World's Best Roofing. Postal or coupon brings free Roofing Book No. 1291.

The Edwards Mfg. Co.
1241-1291 Pike St.
Cincinnati, Ohio

Note construction of Edwards Patent Interlocking Device—no nail holes exposed to the weather.

RAISE BIGGER CROPS

My New No. 8 Low-Down Manure Spreader used now means bigger crops next year. You know this yourself. Manure spreading time is all the time. This new No. 8 Low-Down Manure Spreader is Galloway's greatest spreader.

Positively the best spreader on earth. Double chain drive, endless apron, force feed, front wheels cut under load; close hitch, lightest draft of any low-down machine. Capacity 60-70 bushels. All steel gear, complete with double-trees and neck-yoke. Flexible rake, high speed beater pulverizes finely any barnyard material. Steel wheels, gears coupled with channel steel, trussed like a steel bridge. Box rests on rear trucks, 42 inches high. Superior in every respect to new fangled freaks of heavy draft that eat you up for repairs, annoy you and kill your horses.

K. K. Frost, Ashley, Ohio, writes: "Please find draft for spreader received October 26th. Assume you I am more than pleased with same. It has proven all you claim and more. By buying of your company, I saved \$21.80 and got just what I was looking after."

My Book "A Steak of Gold" FREE
tells all about handling manure to get the greatest profit. Do not buy a spreader of any make at any price until you have dropped a postal asking for this great book worth \$1.00 (costs you nothing) and my BIG SPECIAL SPREADER CATALOG that tells the truth about the spreader business. Mailed free. Get RIGHT on this spreader proposition before you buy.

Wm. Galloway, Pres.
Wm. Galloway Co.

California 40 Acre Special

Write for description of our 40-ACRE SPECIAL, No. 51 growing walnuts, oranges, almonds, prunes, alfalfa. We are subdividing a large tract and furnish all nursery trees, seed, water well and irrigating equipment, implements. We have some of the finest farm land in California, where a good man is bound to make money.

Our Service is Prompt, businesslike, efficient. Bank references. DUDLEY MOULTON, Horticulturist, San Francisco

Our Country Contributors

NOTICE TO READERS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used as follows: \$3.00 for the best articles \$2.00 for the second, and \$1.00 for the third best. All others, 50 cents each.

The Transformation of a School District

(Awarded First Prize of \$3)

IF THE FARMERS are wide awake, energetic and co-operative we find a community of happy, prosperous people: if they are lethargic, discouraged and selfish, we find a community of poor conditions.

I went into just such a community to teach school. The school yard was overgrown with weeds and bushes, the house was in bad repair, window lights broken, door sagging, desks broken, and the house a total stranger to paint.

The only community organization was a nameless one of the boys from six upward, who met each Sunday morning at the crossroads near the schoolhouse to play marbles, pitch horseshoes and, it was whispered by some, shoot craps. Of course these meetings were not conducted as Sunday sessions of a Sunday school club should be, and many were the "cuss fights" and "fist fights" that enlivened them. But as they were the liveliest things in the community I did not blame the boys for attending them.

It has always been my experience that if a boy has nowhere else to go he goes to the bad, or at least he starts, and if there isn't something to get him started on some other road he usually reaches his destination.

When I said something like the above to about a dozen of my patrons who were working the road (the only place I could get them together) most of them thought me a fool. But a few of them evidently believed I was talking sense. I walked home with one of the men who agreed with me. I asked his help, and by making suggestions and partly revealing a plan got him to suggest a community improvement league. We organized the next Saturday night. There were only three present, so every one was made an officer of some importance in the first organization in that community since the Grange had died there thirty years ago. I almost exploded with enthusiasm getting that league launched. You see it took a lot of enthusiasm to make up for the small membership.

The next Saturday night there were five more men and about a dozen women. And then we started in to improve a little. I had armed myself with about 100 farm bulletins from Washington that treated of everything from the sowing of the wheat to the making of the flour into bread. I had a number of household journals and children's papers. We distributed these and then each member was asked to pick out some article that would be interesting to the people of the community. They were to read this article at the next meeting and make comments, and then it would be discussed by the members. We also pledged ourselves that wherever and whenever possible we would try out any experiment that seemed to promise help.

Now I can't tell you every step we took in improving that community, but "We shore did do some improving," as one of our members put it.

The big boys came and cleaned off the school yard and sowed it in grass. We got the county to furnish the paint and we applied it. And when they saw what a glorious transformation a little paint made in that old schoolhouse, and after the special committee on "beautifying the home" found how cheaply they could get good paint by ordering it by wholesale, almost everybody went in on that order and the bright, fresh, pretty houses and other buildings made it look like a different community. And then, of course, everybody had to clean up to make other things match the house.

We got fifty volumes for our library that winter. The young people became interested in some good literature, but most of all in farm literature, which is the best literature for rural communities. We discussed what we read at school and at the league meetings. The farmers have now organized a union that markets farm products, as well as teaching how to produce them.

Now I do not claim to have done this. Organization did it, and the living conditions of that community are 100 per cent better.—Jack Rowland.

Making Land Do Double Duty

(Awarded Second Prize of \$2)

LATE last fall I plowed a field manured it with barnyard manure. On April 11 I harrowed and planted it in Irish Cobbler potatoes, drilling commercial fertilizer in the rows. Just as the potatoes were breaking through the ground I harrowed the patch with a spike-tooth harrow to kill the small weeds and to loosen the crust. The cultivator was started in a few days and after that the potatoes were cultivated every ten days until they were ready for market.

We began digging about the first of July. Owing to the dry weather the potatoes were few, but very large, and sold readily.

After the potatoes were dug we plowed the ground and planted early corn, which yielded an excellent quality of fodder until frost came, although it was not tall on account of drought.

Following are the costs and returns from the plot:

24 bu. potatoes at \$2.....\$ 48.00

18 bu. potatoes at \$1.80..... 32.40
8 bu. potatoes at \$1.60..... 12.80
19 bu. potatoes at \$1.25..... 23.75
10 bu. potatoes, small, at \$1.. 10.00

Total\$126.95
Fertilizers\$15.75
Labor 19.50

Total cost..... 35.25

Net gain from potatoes....\$ 91.70
Corn fodder.....\$7.00
Labor 3.00

Net gain from corn fodder. 4.00

Net gain from $\frac{3}{4}$ -acre plot.\$ 95.70
—F. E. S., Pennsylvania.

Second Crop Profits

(Awarded Third Prize of \$1)

FOR YEARS I had grown celery and endive in my garden for home use only. About a year ago I noticed that some of the farmers in this locality were selling these products on the market, and after a little investigation I decided to give them a trial as a market crop. In early summer I sowed seed in beds, to be transplanted later, after early vegetables were off the ground, for I was going to make two crops grow where but one grew before.

As soon as early peas and beans ceased bearing I prepared the ground for celery. Deep trenches were made and rich yard manure placed therein. The celery plants were transplanted at the beginning of a rainy time, and were well started.

The endive was planted later, on the land where onions, early cabbage and potatoes had just been harvested. The endive was set one foot apart. These developed into fine heads by the middle of September and both it and the earliest celery were sent to market. Endive sold at two or three heads for 10 cents, according to size; celery 5 and 6 cents a stalk. By October 15 I found I had no need of trying to sell to private families in small quantities, for several hotel buyers, having tried my plants, asked to be furnished twice a week regularly with generous amounts. This saved me much time and trouble. My customers seemed greatly pleased with home-grown celery, as little is raised in this vicinity.

One month's sales from these greens alone netted me \$62, with my supply just half exhausted. Remembering this is a second crop for my truck patch, I feel well paid for my efforts.

The hotel buyers have also asked to be furnished regularly with parsley, which they use for garnishing meats as well as flavoring. By this sale my pretty parsley bed shall not droop with the frost, as a temporary covering will keep it green until late fall.—W. H., Pennsylvania.

He Was Innocent

"Tommy, quit pulling that cat's tail."
"I'm only holding its tail, papa. The cat's doing all the pulling."

To Be on the Safe Side

He—Do you think you love me well enough to be my wife?
She—Yes, George, I do.
He—Thank you. I will now know where to come if I can't find anybody that suits me better.

Not Brought Out in the Same Way

"Papa, where does the cow get the milk?" asked little Willie after he had been thoughtfully watching his father milk the patient cow.
"Where do you get your tears, Willie?" asked his father in reply.
"Did you spank the cow, papa?" asked Willie.

Working for Pa

Pa—Jimmy, what on earth are you doing with my watch in the water?
Jimmy—I heard you tell mama you'd have to have it cleaned.

A Good Habit

that makes your day a joy and adds a relish to your work—carry a plug of Piper Heidsieck with you, and as often as you get tobacco-hungry cut yourself a slice of "PIPER" to chew. This is the all-satisfying way to use tobacco and enjoy it.

PIPER Heidsieck
CHEWING TOBACCO (CHAMPAGNE FLAVOR)

has solved for many a busy farmer the needs of a handy, ever-convenient, most delicious and healthful tobacco. Slips into your hip pocket and is ready in a twinkling.

When you chew "PIPER," you are getting the full pleasant taste of superb tobacco—the best leaves of the choicest ripe Kentucky Burley—with the rich, winey tang of the famous "PIPER champagne flavor." Begin with "PIPER" today.

Buy "PIPER" by the Box and you'll always have a supply handy. For your convenience we pack "PIPER" in 2-lb. boxes of 36 separate foil-wrapped 5c Pocket Plugs; also in 2-lb. boxes of 18 ten-cent cuts.

FREE Send 10c and your tobacco dealer's name, and we'll mail you prepaid, anywhere in U.S., a full-size 10c cut of "PIPER" in a handsome leather pouch FREE. The tobacco, pouch and mailing expenses cost us 20c, and we gladly spend the money to get you to try "PIPER."

Sold by dealers everywhere, in all size cuts from 5c up.

LIVE STOCK and DAIRY

Producing and Marketing

Live Stock and Soil Fertility

By H. A. Bereman

THE most stupendous problem soils that permanent agriculture today is the conservation of before the American people ture may be established in a land where the average yield per acre of corn and wheat is less than it was fifty years ago, and this with virgin soil and numerous agencies looking toward greater production. Its urgency is plain, although few farmers have undertaken definite systems of soil treatment that will compel the land to increase its yearly bounty. Many have

been lulled into indifference by the advice to the effect that "keeping live stock will maintain the fertility of our soils." It is possible that those who make this recommendation have not fully weighed the lessons of history and the facts of science.

By men who understand breeding and feeding, and who possess keen business sense, the raising of thoroughbred stock is sometimes a very profitable enterprise. The production of beef, pork, milk and wool for the open market is more often fraught with loss when all the costs are computed.

There are three factors which every farmer will do well to think over very carefully before embarking upon the keeping of live stock with the idea that it will increase or even maintain the soil's productive power.

The first of these is that any widespread increase in the production of farm animals would be followed by a lowering of prices, accompanied by a corresponding rise in the value of feed until it would no longer pay to feed grain to market animals. That such a condition exists at the present moment is evident to all who read the signs of the times.

The second consideration is that live stock is not doing its duty to the soil which sustains it, because of the enormous waste of manures. One need only make himself familiar with the facts throughout the middle west to be convinced that including the liquid manure, which is rarely saved for economic use on western farms, counting what other manures are never used at all, what is thrown into streams or burned, what is leached by rains and fire-fanged in dry piles—there is more manure wasted than is applied to the land. How can any one urge live stock as a soil conservator in the face of such thriftless practices?

The third and least understood factor is that if every ounce of manure be applied to the land, live stock alone can never maintain, much less increase, the fertility of the soil.

As to the validity of this statement the following challenge is issued: No land was even made rich by manure from animals fed only with crops grown on that land.

It is well to remember that a large proportion of the food consumed by animals is required for their bodily maintenance and never finds its way to any market, nor back to any sort of fertilizer, but is dissipated in the process of living and moving about.

The sooner farmers realize the fact, which never has been disproved, that live stock alone can not conserve the soil's richness, the sooner will they be able to meet the present exigency in an intelligent and practicable way.

It is admitted that lands have been made productive under forms of live stock husbandry where quantities of feed were purchased and the resultant manures concentrated upon a limited acreage. Certain acres upon a farm have been enriched by manures made from crops grown on other parts of the farm. Those soils in China which still remain fertile, and the oft-quoted high average acre yields of Europe, are made possible by additions of fertilizing material from without, combined with an almost absolute wastelessness.

In some investigations made by the Department of Agriculture of results under various types of farming (Bulletin No. 41) it was found that on 700 farms in the best sections of Indiana, Illinois and Iowa the yield per acre of corn, oats and wheat was slightly higher on live stock farms than on grain farms. The increase, which is so small as to be negligible, can be accounted for partly by the fact that a mountain of effort has been made to induce farmers to feed live stock and save manures, while scarcely any effort

has been made to educate them to adopt intelligent systems of grain farming.

Meat, milk and wool are not made from nothing. When live stock products are sold they remove from the soil definite and considerable amounts of plant food. The continued removal of these essential plant-food elements from the soil creates a reduction in productive power followed by abandoned farms, less food per capita, low standards of living and finally famine. This is not hysteria, but history, as any one may know by investigating conditions in India and elsewhere in Asia, where every year a million humans die from lack of food.

Soil conservation is the biggest material problem before the American people today, and it will grow more acute every year it is left unsolved. It can not be solved by feeding live stock unless in some way not now apparent live stock can be made so profitable that a portion of the earnings can be spent for forms of fertilizers which are needed in most soils and which are lacking in animal manures.

Worms Kill Thousands of Hogs

THE COMMON HOG WORM is found in greater or less degree in nearly all hogs, and many authorities in the swine industry have given it as their opinion that worms kill as many hogs as cholera, and cause greater financial losses, as they prevent the best development of vast numbers all over the country. Thousands of dollars worth of feed fed to hogs is not converted into pork on account of these parasites. Every swine raiser should realize the danger of worms and fight them vigorously and constantly. It requires constant care to insure the freedom of a herd from this pest, but the owner can not afford to give less.

The symptoms of worms in hogs are not infrequently mistaken for signs of cholera by those not thoroughly familiar with them. A herd badly infested with worms lose appetite and refuse their food, may be given to either diarrhoea or constipation, fever, coughing, and convulsions. They show dullness of the eye, the eyelids frequently sticking together. In young

pigs the back becomes weak, and sometimes control of the hind parts is entirely lost.

Hogs gather up newly hatched worms or ready-to-hatch eggs while feeding, and naturally distribute them wherever they run. Consequently strict preventative measures should be used constantly. Where herds are infested they should be given clean, sanitary quarters, and if possible removed in their usual runs until the worms are practically all dispelled by treatment, and then moved to a new location and remedies given regularly. Keep salt, charcoal, wood ashes, cinders or coal slack where the herd may have access to them at all times.

Not only is it essential that hogs should have all their vitality to produce economically the maximum gains, but hogs in a condition of perfect thrift are far less liable to contract any disease. In particular does the effective use of serum and virus used in the treatment of hog cholera depend upon having the hogs in a thrifty condition, and in perfect health. Animals badly infested with worms should not be vaccinated for cholera, for the chances would be against them.

Keep the herd free from worms by regularly giving a preventative remedy. It will prove to be a plan that is doubly profitable.

Canadian Wheat to Feed the World

The war's fearful devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and there is an unusual demand for Canadian wheat. Canada's invitation to every industrious American is therefore especially attractive. She wants farmers to make money and happy, prosperous homes for themselves while helping her to raise immense wheat crops.

You can get a Homestead of 160 acres FREE and Other lands can be bought at remarkably low prices. Think of the money you can make with wheat at its present high prices, where for some time it is liable to continue. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to the acre. Wonderful crops also of Oats, Barley and Flax.

Mixed farming is fully as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required either for beef or dairy purposes. Good schools, markets convenient, climate excellent.

Military service is not compulsory in Canada, but there is an extra demand for farm labor to replace the many young men who have volunteered for the war.

The Government this year is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Superintendent Immigration, Ottawa, Canada, or

Molds Fatal to Poultry

By H. L. Kempster

Moldy litter in poultry houses and moldy feed are the cause of a large number of deaths among poultry, and particularly among chicks. These molds taken into the body of the fowl cause a disease known as aspergillosis. The disease is as fatal as the name sounds. Our scientists have neglected to find a shorter name for the disease, but among poultrymen chicks affected with the trouble are commonly spoken of as "lungers." Many times the dis-

ease is mistaken for white diarrhea. The Missouri College of Agriculture, in its investigations of poultry diseases, notes the following characteristic symptoms: The chick stands around in a drowsy manner and shows little desire to eat. The wings hang down, the breath is rapid and a white diarrhea is present.

An affected chick will be found to have soft yellow growths from the size of a pin head to that of a pea, mainly in the lungs, but sometimes in the intestines and mesentery. These growths, clogging the air passages of the lungs, are directly responsible for the death of affected birds.

In mature fowls there are two forms of the disease. The mucous membrane lining the air sacs and tubes may be covered with a membranous formation which is soft and yellowish and has an offensive odor, or the post-mortem will reveal white or yellowish modules imbedded in the tissues of the lungs.

Early symptoms are that the bird is inactive, sleepy and if forced to run will fall from exhaustion. Breathing is rapid, appetite is diminished and more or less catarrh is present.

There is no cure for the trouble, but since it is caused by eating moldy feed or by being permitted access to moldy litter, it can be entirely prevented by not compelling fowls to eat moldy food and by keeping them away from moldy litter.

This is just one of the many poultry troubles that can be entirely avoided by feeding nothing but fresh, clean feed and keeping the pens and yards free from filth and molds.

The Cause and Cure of Roup

RECENTLY read an article on roup in which the writer says that the open door is the cause of colds and roup troubles.

Poultry keepers are very anxious to get their flocks into warm homes on the approach of cold weather, and to avoid drafts, etc.

While this advice is good in a way, I believe it does not get at the real causes, and may lead without some qualifications to those very troubles which are sought to be avoided. In my experience I believe that it is a mistake to believe that cold air is a cause of colds. Roup was practically an unknown disease when fowls roosted in trees or under the open wagon shed, and came in with the tight hen-houses. I have never had many cases of roup in my flocks, excepting one winter when I kept the hens in the tightest house I ever had. The house was double boarded and lined with tar paper, lots of glass in front and very

poor ventilation. I had the house a little overcrowded, but was calculating on lots of winter eggs, but instead I got a good run of roup and no eggs.

So, then, in my experience the two main causes of roup and kindred afflictions are the lowering of the vitality of the bird by improper feeding or otherwise, and impure, damp air of a tight henhouse. Plenty of ventilation is the remedy for both dampness and impurity, for they are both in the exhalations of the fowls.

Drafts are incidentally a cause when these conditions of warmth, dampness and impurity exist, and only then. An open door is one of the best means of ventilating a poultry house during the day, and a partly raised window or muslin front at night if the house is so tight as to have no cracks. I aim always to have the back (or north) and sides of a house tight, while the front may have a few cracks in it just as well as not. The scratching shed or house with an open door, with plenty of dry litter for the fowls to exercise in, is the greatest preventative of colds and roup.

If one is so unfortunate as to have roup appear in his flock, prompt measures should be taken to check its spread and stamp it out. The affected birds must be separated from the well ones, and if not too far advanced in the stages of this disease may be successfully treated by some of the local remedies recommended for the cure of roup. The houses should be thoroughly cleaned and disinfected, and kept dry and supplied with plenty of fresh air. Ten to twenty drops of tincture of iron in a quart of water should also be given. A change of diet is also advised, and if care and watchfulness are exercised the epidemic can be stopped. In the worst cases, however, it is far better to kill the affected birds and bury or burn them, for the disease is very contagious. This will sometimes save the disease going through the whole flock if taken care of at its first appearance.—Archib E. Vandervoort, Sidney Centre, N. Y.

A Point in Their Favor

"Is your car a good one?" asked the prospective purchaser.
"Indeed it is," replied the salesman.
"There are more of them stolen than of any other make."

He'd Wish He Hadn't

O. K. SEED STORE, Indianapolis, Ind.

ing the finely grated meat of the cocoanut. Boil ten minutes longer, stirring constantly or it will burn. Pour in buttered tins and cut in squares. Do not be discouraged if this does not harden at once, forty-eight hours being the usual time.

PEANUT TAFFY—One pint New Orleans molasses, two pounds brown sugar, one-half pint of water, three pints of peanuts. Boil the molasses, sugar and water until a little dropped in ice water will harden quickly. Shell the peanuts and spread on buttered tins; pour the taffy over them and put in a cool place to harden.

PEPPERMINT DROPS—Two cupfuls of granulated sugar, one-half cupful of water, eight drops of peppermint. Place the sugar and water in a saucepan on the range and stir until the sugar is dissolved. After it begins to boil do not stir again, but remove the spoon and let it boil just eight minutes. Set the dish aside, add the peppermint and stir briskly; then drop from a spoon on paraffin paper or buttered platter.

MAPLE PANOCHE—To make maple panocha, which is a very delicious Christmas sweet, grate one pound of maple sugar, add one cupful of milk, stir over the fire until the sugar is dissolved and then boil until the syrup forms a soft ball when dropped in cold water. Take from the fire, stir for a moment until it begins to thicken, then add hastily half a pint of pecan meats and turn the mixture into a square greased tin. When partly cold mark into small squares with greased knife.

Splendid Christmas Recipes

ROAST DUCK—Clean the bird carefully, reserving the liver, heart and cleaned gizzard. Wash the bird on the outside thoroughly. Scrub with a vegetable brush and warm water and scrape with a dull knife until perfectly clean. Mix two cups of bread crumbs with one cup of cracker crumbs. Pour boiling water over these, then drain it off immediately. Cook two slices of onion in three tablespoons of butter until soft, but not brown; add the crumbs and season highly with black pepper, salt and a teaspoon of sage. Add three-fourths cup of milk; heat and fill the body and crop cavities, sew up the skin and truss the fowl. Place the liver in an envelope of dressing under the duck. Bake two hours, reducing the heat the last half hour. A fat duck requires little basting. When done, remove from the pan, pour off all the fat and add one cup of boiling water; thicken with one teaspoon of flour mixed with a little cold water. Cook twelve minutes, then add the chopped gizzard and heart, which have been cooked two hours in salted water.

DRESSING FOR THE CHRISTMAS TURKEY—For the stuffing of the Christmas turkey, duck or goose is something very delicious. Pare and slice thin five good-sized apples, sprinkling them with fine cracker crumbs as you do so, to keep them white. Pour boiling water over a pound of white prunes, and when they are swollen remove the stones. Seed half a cup of raisins and add them with half a cup of cracker crumbs and a teaspoon of sugar. Lastly, put in a beaten egg and a quarter of a teaspoon of salt. Mix well and stuff the bird, leaving room for swelling.

CHRISTMAS FRUIT COOKIES—Beat half a cup of butter to a cream; gradually beat in one cup of sugar, then beat in half a cup of raisins, chopped fine, and gradually add three tablespoons of milk. Stir together two cups of flour, one-fourth teaspoonful of soda, one-fourth teaspoonful each of ground cloves and grated nutmeg, and half a teaspoonful of ground cinnamon. Add the flour mixture to the first mixture and as much more flour as is needed to make a stiff dough. Roll a portion into a sheet and cut into rounds. Bake one, and if it spreads too much in baking add more flour until the mixture holds its shape.

FRUIT GINGER CAKE—Cream one teacupful of butter, add one teacupful of brown sugar and beat until light and creamy. Dissolve two teaspoonfuls of soda in a little hot water and add to one teacupful of sour cream. Mix the cream with one teacupful of molasses. Beat the yolks of four eggs until light and the whites to a stiff froth, then mix the yolks and whites. Add the eggs and molasses to the butter and sugar; stir in one teaspoonful of salt, two tablespoonfuls of ground ginger, four teacupfuls of sifted flour, one teacupful of seeded raisins, one teacupful of currants and one teacupful of chopped figs. Mix thoroughly and turn into two shallow greased pans and bake for about thirty minutes in a moderate oven.

LEMON CREAM—Into one and one-half cupfuls of boiling water stir two tablespoonfuls of corn starch wet with water and the juice of one large lemon. Add the beaten yolks of three eggs and one cup of sugar. Boil this five minutes, then stir in the whites beaten stiff. Pour into small glasses or cups and serve cold with whipped cream on the top of each glass.

READ!

"SAL-VET is certainly a great medicine. I have been feeding it all winter so far and since I started, my stock are better than ever before."

ALBERT MEANS,
Walthill, Nebr.

"Have been feeding SAL-VET to some of my horses which were very thin and in a run-down condition. They have now picked up in flesh and spirits in spite of the heavy work incident to this time of year."

ELI FURLAND,
Artesian, S. D.

"The more I use SAL-VET the better I find it. My sheep and hogs were never so thrifty and healthy as now. We butchered this week and did not find a single worm, while our neighbors' hogs are wormy and dying. I have been recommending SAL-VET to them and they are now ready to use it too."

WESLEY CHAMBERS,
Bussey, Iowa

No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked SAL-VET packages. Shipments for 60 days' trial are based on 1 lb. of SAL-VET for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular sized packages.

From a photograph of Mr. C. E. Brooks, inventor of the Appliance, who cured himself and whose experience has since benefited thousands. If ruptured, write today to Marshall, Michigan.

The Truth About Rupture

The Wonderful Success of the Brooks Appliance Has Caused Many Irresponsible Parties to Seek to Imitate It.

Do Not Be Tricked by These "Fly-by-Night" Advertisers Who Offer Such Wonderful "Guarantees," But Who Have No Responsibility to Back Up Their Promises.

The Brooks Appliance Has Been Manufactured and Sold By Us for More Than 30 Years.

Our Customers Include Thousands of Physicians, Many Noted Men and Women. **OUR LARGEST SINGLE CUSTOMER IS THE U. S. GOVERNMENT.** Our Business Is Conducted Along the Same High Plane of Business Integrity as That of the Largest Banks and Mercantile Houses. There Are No "Ifs and Ands" When You Deal With Brooks, and the Appliance Is

SENT ON TRIAL TO PROVE IT!

The London (England) Home of the Brooks Rupture Appliance Co. Corner Kingsway and Portugal St.

The Home of the Brooks Rupture Appliance Co. at Marshall, Mich., U. S. A. Owned and entirely occupied by the Brooks Company. 15,000 sq. ft. of floor space. Largest establishment of its kind in the world.

The Amsterdam (Holland) Home of the Brooks Rupture Appliance Co. At No. 4 Pleisstraat.

The Most Universally Endorsed Appliance for the Retention and Cure of Rupture in the World.

The Brooks Appliance is the result of 30 years' experience and stands today as the most perfect device ever invented for the relief and cure of all forms of rupture. It brings instant relief, and in an astonishing percentage of cases, accomplishes an ABSOLUTE and PERMANENT CURE.

There are no "salves," no "harness," no "paraffin"—no lies.

The Brooks Appliance is never sold in drug stores, nor in any other way than by mail, direct from the maker, and every Appliance is especially built for the case for which it is intended.

It is small and pliable, and can not be detected through the clothing. Can be washed without injury, is ventilated and a real pleasure to wear. One of these Appliances will make life better worth the living for every ruptured man, woman or child.

It is sent on trial and you are the judge whether our claims are true or not.

Fill out the FREE COUPON today and mail it at once, whether you try this Appliance or not. It will bring you much valuable information and should prove the first step toward your final and complete cure.

Endorsement from Surgeon-General of U. S. Army

Let us send you a fac-simile endorsement from the Surgeon-General of the U. S. Army. We have sold hundreds of Appliances to the Government for use in Army Hospitals.

The Surgeon-General says: "In each case the Appliance was satisfactory."

Southern Physician Cures Himself

In writing to you sometime since, endorsing your Appliance, I was conscientious in giving, as I believed, its just deserts, but since, I am even more agreeably pleased to state in addition thereto a "supplement"—a positive cure. Had engaged a surgeon to operate on me about 1st of February inst., but no recurrence of trouble for the past four months assures me my trouble is over and no knife needed. I have (and deem this necessary in all cases) been strict in observing all careful directions and am happy in the enjoyment of its fruits, for the trouble was a serious one and now I am as well as I ever was. Thanking you for courtesies and your invaluable appliance, I am, believe, me,

Most gratefully yours,
(Address) W. W. Hill, M. D., D. D. S.
Washington, Ga.

Kentucky Physician Says—"I Cannot Overestimate Its Value"

Frankfort, Ky.

Brooks Rupture Appliance Co.,
Marshall, Mich.

Gentlemen: I have for several years used your Rupture Appliance to the exclusion of all others with perfect satisfaction. It has not failed to give relief in any case in which I have used it. It is especially to be relied on in old chronic cases—in old persons, especially laboring men. I can not overestimate its value to my patients. Every old chronic case that I have applied it to has sent another sufferer to me for one.

Sincerely yours,
U. V. Williams, M. D.

Cured at the Age of 76

Mr. C. E. Brooks, Marshall, Mich.

Dear Sir: I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
High Point, N. C. SAM HOOVER.

REMEMBER

I send my Appliance on trial, to prove what I say is true. You are to be the judge. Fill out free coupon and mail today. No salves—no harness—no plasters—no lies—no false or misleading promises.

Through His Nerves

A Duelist is Conquered by an unskilled Antagonist

By Willard Malbie

IT IS NOW more than half a century since a family of Americans named Wentworth made a tour abroad. Vivien Wentworth was then a lovely girl of nineteen. She had been brought up in seclusion and had therefore not received much attention from young men. The visiting of new and to her strange countries at a time when few Americans went to Europe naturally produced upon her a marked impression. Being of an artistic temperament, she enjoyed especially the works of art to be found in Europe, and while in Rome had a special advantage in being shown through the marvelous collection of art treasures in the Vatican by a young French artist named Armand Trudeau.

This young man was especially fitted by nature to captivate a young girl of romantic ideals. He was handsome, with large, dreamy eyes, a high forehead and an olive complexion. He gave great promise as an artist and wrote very clever verses. He soon won his way into Vivien's affections, though he was opposed by her parents, who did not wish her to marry a foreigner.

So the matter stood when Egbert Kenworthy, an American of an entirely different type from Trudeau, appeared in Rome and made the acquaintance of the Wentworths. While Trudeau's face might have served for a model of St. Sebastian, Kenworthy's would have made an admirable David. He was the son of a New York banker and was taking a trip through Europe as an outing previous to entering his father's counting-room.

Kenworthy did not know that an attachment had already sprung up between Miss Wentworth and Trudeau. He was given every encouragement by the parents of the girl he wished to win, and not long after his meeting with Vivien he proposed to her. She accepted him, but with a frank avowal that she preferred Trudeau. Kenworthy at once withdrew his attentions and left Rome. Then Vivien's parents, being convinced that her heart was fixed upon the artist, consented to the match, and the couple became engaged.

The warm season in Italy was now approaching and it was decided by the Wentworths to go to Paris and accept an invitation to visit Trudeau's family at their chateau not far distant from the capital. Trudeau was to accompany them. They found his relatives to be eminently refined and were greatly pleased with the intended connection.

But the marriage was destined not to take place.

At that time there was in Paris Jules Chartier, one of those duellists of the earlier part of the nineteenth century each of whom tried to make a longer list of victims according to the code duello than any of his predecessors.

A painting of Trudeau's was hung in the salon. One day when the artist was present chatting with friends who were admiring his work Chartier stopped before it and began to ridicule it. Trudeau flushed and made a remark ironical to the critic's knowledge of art. Chartier lightly slapped The artist on the cheek.

It seems strange that a system which pretends to justify murder should ever have prevailed. The insult, which was given publicly, forced Trudeau to challenge the man who had slapped him or be forever tabooed by his associates. He had no skill whatever with any weapon and the affair must result in his being vanquished and probably killed. He knew that he must suffer death and wished to bid a last farewell to his fiancée. But this was not permitted. She might take measures to prevent his fighting and thus disgrace him.

The morning after the insult Trudeau and Chartier met in the Bois de Boulogne and the latter added one more name to the list of men he had killed. Trudeau's death was a great shock to Vivien Wentworth. Her parents took her away from Paris at once to Switzerland, for the mountain air was considered best for the stricken girl.

In September, Kenworthy reached Paris on his way to America. There he happened to hear that a young artist named Trudeau had been killed in a duel. He gathered all the information possible concerning the affair and it was plain to him that his rival, or, rather, the man who had prevented him from winning Vivien Wentworth's love, had been murdered. Furthermore, he was told that Chartier was invulnerable. He was an expert with every weapon, from the dirk to the claymore, from the derringer to the rifle.

"No one," said Kenworthy's informant, "can hope to conquer Chartier except through his nerve. It is the certainty that his skill will protect him and enable him to kill his opponent that keeps him cutting notches on the cane which bears the number of his victims. Nevertheless he has splendid nerve and, this being the only possible avenue through which to attack him, he is liable to die a natural death in his bed."

Kenworthy dwelt on this statement a long while—a man with splendid nerve, whom an enemy could hope to attack only through that nerve. How might the nerve be attacked? He learned that Chartier, like most Frenchmen, had been born a Roman Catholic, though he had never been to mass or confession since his boyhood. Kenworthy went to a priest and submitted a plan for bringing Chartier back into the fold, but, if this were not practicable, to prevent his committing any more murders.

The priest sought the duelist and tried to convince him of the heinousness of his

crimes. Chartier was unmoved. After expounding upon him all the persuasive eloquence he possessed without avail the priest said to him:

"Be it so. I leave you to your fate, for no man who practices deliberate murder as you do can come to any good end. Beware and repent before it is too late. If you do not, God's wrath will surely smite you."

For the first time during the interview Chartier winced. The father left him without another word, and the duelist sat for some time lost in thought. Then he took up the cane on which he kept the record of his victims. There were twenty notches. He cut one more, saying to himself:

"I will make good this last notch, then I will retire on my laurels."

That evening Chartier dined alone at a cafe where he was used to taking his meals. A young man entered the cafe and took a seat at a table where he faced the duelist, fixing a calm, resolute look upon him. Chartier endured it for a time, then said in the usual icy tone he used in beginning an affair:

"Monsieur, I appear to interest you."

"You certainly do, since I represent your victims," said the man in broken French.

Chartier started.

"I am commissioned by your last victim, Armand Trudeau, to avenge him," continued the stranger.

Recovering himself sufficiently to retain his outward coolness, Chartier said: "I do not wish to be disturbed at my dinner. Please let me have your card and a friend of mine will call on you."

"What for, monsieur?"

"To arrange a meeting between us."

"There is no necessity to arrange a meeting. I will meet you on the ground where you killed Armand Trudeau at 6 tomorrow morning. You shall have your friends with you and choose the weapons you prefer. As for me, I need no human assistance."

Chartier looked at the man in wonder. He would have no seconds, would leave the choice of weapons to his enemy. What did it mean? He nodded an assent and went on with his dinner. The stranger continued to stare at him. Finally when Chartier raised a glass of wine to his lips his hand trembled. As soon as he had finished his dinner, making an effort to appear unconcerned, he arose from the table.

"Adieu till tomorrow, monsieur?"

In the morning Chartier arrived with his seconds bearing rapiers. While he was waiting for his antagonist a carriage drove up and his enemy alighted. There was on his face a look of cool resolution, indicating that he had no fear whatever for the result. Being given a rapier and his enemy another, the two faced each other and the encounter began.

The stranger showed himself only a fair fencer. He kept his eye on that of his antagonist, as is customary with fencers, and it produced an effect. Chartier astonished his seconds by his weak thrusts, his almost unsuccessful defense. Under the influence of his antagonist's eye he grew weaker, more defenseless, till at last the stranger, taking advantage of his mental condition, ran him through the heart.

A year passed before Vivien Wentworth met the man who had avenged her. Shortly before their meeting she heard who killed Chartier and sent for him.

It was a singular meeting between the bereaved girl and the man who avenged her. Kenworthy stood waiting for her to speak. Several times she essayed to do so, but either she could not frame in words what she felt in her heart or her tongue refused to utter them. At last she held out her hand to him, and at the same time all she felt was expressed in her features with far more intensity than words could have given it. Kenworthy sprang forward and seized her yielding form in his arms.

No Need to Tell Them

Preacher's Wife—Wake up, John, there are burglars in the house.

Preacher (yawning sleepily) — Never mind, Mary, they'll soon learn there's nothing here.

It Cured Him

"When I was a boy I once got a hard whipping for telling the truth."

"That explains things. You never did it again, did you?"

Wanted Him Too

"When I left my old home the people wanted me to come back."

"That's nothing to brag about. When I left home they wanted me so bad they sent the sheriff to bring me back."

An Accomplished Seamstress

"Carrie Nation must have been a great tailor."

"What do you mean?"

"Didn't she make all the Kansas saloon keepers' clothes (close)?"

Works to Benefit Mankind

"Edison says we sleep too much."

"Maybe we used to, but he has invented so many ringing and jingling things that I don't see how we can now."

OUR MARKET REVIEW

Reports of Crops, Markets, Trade, Etc., With Advice

KNOW THE PRICE AND ASK IT

We believe the prices attached to the crops named below are fair and equitable and farmers ought to receive them. They are based on the Chicago market, unless stated to the contrary. When the price is paid in the market is the time to sell, allowing freight and a reasonable handler's margin off of the central market to make the home price. We believe these prices will be paid before the next crops are ready, based purely on demand. How people will and see these for these them, they will be quickly paid. But, regardless of the number reading the paper (the circulation is now over 200,000), those of our readers who demand these prices and hold for them, will be very sure to get them, because the world needs all of the crops, and can not get along with only part of them. Those who control may need to hold until the DUMPERS have unloaded, but their time is bound to come when THEIR price will be paid. **HOLD FOR THESE PRICES. SELL AT THESE PRICES WHEN THEY WILL BE PAID AND QUIT SELLING THE HOUR THEY DROP BELOW, THEN THEY WILL GO RIGHT UP AGAIN.** Keep in mind that the more farmers who hold for and ask the prices the sooner they will come, because of reducing the supply in other hands.

A fair price, known by the producers, and that price demanded, will make marketing and prices of farm products as definite as any commodity produced in the country.

Minimum Prices

The following prices are based on conditions as they exist now. Should conditions change materially in a short time, like the end of the European war, it will make revisions necessary. We predict the war will be a long one.

Prices are based on Chicago unless stated to the contrary.

WHEAT—No. 2 red.....	\$1.25
WHEAT—No. 2 hard.....	1.25
WHEAT—No. 1 northern at Minne-	1.25
apolis.....	
CORN—No. 2 white (new crop after	.75
cribbled).....

BEANS—Choice hand-picked pea, bu.	2.75
POTATOES—Choice round white.....	.75
BROOM CORN—Good to choice..	\$100@150

IN ITS SUMMARY of general business conditions of the country, as of December 5, Bradstreet's says: Irregular. Financial machinery being restored. Exchanges resuming. Money easier. War orders and grain purchases help industries and swell export trade, despite scarce and high ocean freights. Domestic trade lags. Retail affected by mild weather. Southern buying and collections hurt by low-priced cotton. Cold weather needed east, west and north. Wheat exports close to record. Winter wheat needs rain. Clearings larger, but well below last year. Building slow.

Improvement in business has continued, but it is far from what it ought to be in this country of wonderful resources, and considering the social, economic and political conditions in much of the balance of the world. We believe greater confidence in the future and gradually more improvement in business will be the rule.

The weather has again turned unseasonably warm, but rains have fallen over a considerable part of the country, which relieved growing crops. The shortage of rainfall for the year, except in the northern part of the county, is alarming, as streams are low, with many wells dry and winter coming on. Unless soaking rains are general yet before winter closes in, farmers will suffer much from lack of water for stock.

The visible supply of all cereals is greater than two weeks before, but only by a shade. The price of cash wheat is $\frac{1}{4}$ to 2c higher, corn 2½c and oats about 2½c lower than two weeks before. Exports of all grain, particularly of wheat, continue large. Receipts of wheat are falling off some, but the time is near when Argentina will begin to supply part of the foreign trade. We believe the exporting capacity of our southern competitor has been forecasted and such effect as it will have on the price of wheat has been discounted. We therefore look for well-maintained prices and eventually higher prices for wheat.

Live stock prices reached very low levels. With considerable relief already furnished by lifting the quarantines against some of the big markets, we naturally should expect some improvement in values. But we caution our readers against trying to be the first to sell, as the markets will in all probability be glutted for some days. Hold until the first rush is over, if you can. The outlook is for a broader cotton market and some betterment in prices. Potato prices

are lower. This is quite common in December, when people don't buy so many potatoes, but give attention to things more pertaining to the holidays.

Advice

WHEAT—Hold it for \$1.25, basis of central markets. **CORN**—If cribbed, hold for higher prices. If from field, sell around 60 cents. **OATS**—We look for higher prices. **POTATOES**—Hold from market this month. **BROOM CORN**—Hold. If you must sell, let us help you to sell direct. **COTTON**—Hold.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on November 28, 1914, with comparisons, are shown in the following table:

	Nov. 28, 1914	Change from two weeks before	Change same period last year	Change from a year before	Change from 2 years before
WHEAT.....	\$1,910,000	X1,217,000	X 103,000	X13,994,000	X18,644,000
CORN.....	4,307,000	X 688,000	X 1,105,000	X 460,000	X 834,000
OATS.....	28,636,000	X 698,000	X 1,661,000	X 3,193,000	X25,680,000
BARLEY.....	8,563,000	X 451,000	X 909,000	X 536,000	X 2,494,000

The visible supply of wheat in Canada on the same date was 36,102,000 bushels. This is 4,488,000 bushels less than two weeks before, and is 12,000,000 bushels less than a year before. The visible supply of oats was 4,119,000 bushels on the same date, which is 233,000 bushels less than two weeks before and is 6,671,000 bushels less than a year before.

Chicago grain futures closed on December 4, 1914, and two weeks before as follows:
Wheat—December, \$1.16½; May, \$1.21½. Two weeks before, \$1.15 and \$1.21½ respectively.
Winnipeg, Canada—December, \$1.16½; May, \$1.22½. Two weeks before, \$1.16½ and \$1.22½ respectively.
Corn—December, 63½c; May, 69c. Two weeks before, 66½c and 70½c respectively.
Oats—December, 47½c; May, 52½c. Two weeks before, 50½c and 52½c respectively.

Chicago Produce Market

Chicago, December 3, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address "The Market Place," care of Up-to-Date Farming, Indianapolis, Ind.

POTATOES—Arrivals by cars with comparisons follow:	This week	Last week	Last year
Monday.....	75	55	59
Tuesday.....	44	39	30
Wednesday.....	44	39	30
Thursday.....	38	30	28
Total, 4 days.....	215	141	133

Market was slow and prices were without important change. Having stocked up liberally Wednesday, buyers were inclined to go slow today and the demand lacked breadth. Receipts were smaller, but ample.
Sales reported were: Per bushel—Wisconsin, bulk, 2 cars at 32c, 3 cars at 35c, 3 cars at 37c, 2 cars at 38c, 1 car at 40c, 2 cars at 43c; sacked—2 cars showing dry rot at 37c. Minnesota—Sacked, showing frost, 2 cars at 36c.

	December 3	Two weeks before	A year before
Wisconsin, white.....	30@43c	38@52c	65@73c
Wisconsin, red.....	30@35c	38@52c	65@73c
Minn., white and rus. 35@41c		40@52c	65@70c
Michigan, white.....	35@41c	45@52c	65@70c

NEW POTATOES—Only small offerings as yet appear. Demand also is limited.
Barrels, Bermuda, red.....\$9.00
Hampers, Louisiana, red.....2.25@2.50
Florida, white, not fine.....2.00

SWEET POTATOES—All common are dull and easy. No. 2 stock of any kind has to be sold low. Choice goods moderate sale, but nothing large to trade. In some cases a shade easier prices quoted. Those handling Marylands say they find some soft among them.

	December 3	Two weeks before	A year before
Barrels, Virginia.....	\$3.00	\$2.75@.85
Illinois.....	2.50@3.00	1.40@1.50	1.00@1.10
Hampers, Jersey.....	1.25	1.10@1.15	.75@.85
Maryland.....	1.00	1.25	.65

Illinois.....	.50@1.00	.75@.80	.25@.50

*No. 1. †No. 2.

BEANS—No change since late marking down the price of pea beans. No anxiety to trade. It is just fair and covers all kinds.

	December 3	Two weeks before	A year before
Pea Beans, hand-picked, choice.....	\$2.55	\$2.70@2.90	\$2.15
Common.....	2.35@2.50	2.55@2.65	1.75@2.00
Red Kidneys.....	3.25@3.50	3.25@3.50	2.80
Brown Swedish, long.....	2.75@3.25	2.50@3.00	1.75@2.00
Brown Swedish, round.....	2.75@3.25	2.50@3.00	2.00@2.25

HAY—Receipts, 701 tons. Supply liberal of both timothy and prairie hay and demand only fair. Market quiet.

	December 2	Two weeks before	A year before
Ch. Timothy.....	\$17.00@17.50	\$17.00@19.00	\$18.00@19.00
No. 1 Timothy.....	15.00@15.50	15.00@16.00	17.00@17.50
No. 2 Timothy.....	12.00@13.00	12.50@13.00	14.00@15.00
Kans., Iowa and Neb. Prairie.....	6.00@14.00	6.00@14.00	13.50@14.50
Ills. and Wisc. Prairie.....	9.00@10.00	9.00@10.00	7.50@9.00

	December 3	Two weeks before	A year before
Straw.....	\$9.00@9.50	\$9.00@9.50	\$8.00@8.50
Oat.....	6.00@6.50	6.00@6.50	7.00@7.50
Wheat.....	6.00@6.50	6.00@6.50	6.50@7.00

BROOM CORN—There is an ample supply. No special demand for car lots exists. There is an order trade for small lots.

	December 3	Two weeks before	A year before
Illinois.....	\$80@120	\$80@120	\$150@160
Western.....	60@90	60@90	110@160

	Change same period last year	Change from a year before	Change from 2 years before
WHEAT.....	X 103,000	X13,994,000	X18,644,000
CORN.....	X 1,105,000	X 460,000	X 834,000
OATS.....	X 1,661,000	X 3,193,000	X25,680,000
BARLEY.....	X 909,000	X 536,000	X 2,494,000

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Monday.....	4,614	3,811	4,568
Tuesday.....	3,947	4,191	3,481
Wednesday.....	4,828	4,581	2,945
Thursday.....	4,818	2,710
Total.....	17,307	12,583	13,707

*Thanksgiving Day.

Fresh, Firsts..... 28 @29c
Ordinary, Firsts..... 26 @27c
Miscellaneous, cases included..... 20 @29c
Cases returned..... 19½ @28½c
Checks, good sound..... 14 @15c
Cuddled higher.....
Dirties, good..... 15 @16c
Refrigerator eggs are quiet and easy. The demand is light and the offerings are fairly liberal. April extras, charges paid, were quoted 21@21½c. Firsts quoted 20@20½c, storage paid.

APPLES—No change quoted. Volume of business doing is just fair. It is mainly local. Supply is liberal of barrels and boxes. Of bulk apples only occasional cars are now received and they were quoted as good sale. No material change in prices quoted. Some prices of apples are as follows: Baldwin, \$2.20 @2.25; Ben Davis, \$1.50@1.75; Winesaps, \$2.50@2.75; Kings, \$2.50@2.75; Jonathans, \$3.50@4; Grimes Golden, \$3@3.25; Greenings, \$2.50@2.75; Northern Spies, \$2.25 @2.50; all per barrel.

The Market Place

To Bring Seller and Buyer Together

There is an enormous demand in every part of the country, amongst farmers and people in towns and cities who are readers of this paper, for farm products that are grown in other parts of the country. Therefore, as an additional help to members of the Farmers Society of Equity, we have established this service **TO BRING PRODUCERS AND CONSUMERS TOGETHER**. Any member or clearing house of the society or any person who will become a member by now paying the entrance fee of \$2.50, may report his crops to sell or what he wants to buy, to the National Clearing House, F. S. E. and get this service **FREE**.

Rules

To save unnecessary correspondence, the quantity, variety, grade, condition as regards packages or bulk, and price wanted should be given. If an article that may be marketed by parcel post, a delivered price should be named. Prospective buyers can state what they want and may name the price they will pay. **TERMS**—They may be as agreed upon. Mail shipments should always be cash with order. Honest transactions are imposed on every person who uses this department, and dishonesty or trickery will be exposed when reported. Always mention "The Market Place, Up-to-Date Farming," when writing.

SAVED \$120 ON CAR OF POTATOES

Gentlemen: We take pleasure in writing you regarding the wonderful saving we just recently made on a car of potatoes which we ordered through this co-operative system. Our potatoes were purchased from L. H. Brockman, secretary of the Parkers Prairie (Minn.) Clearing House. We saved 20 cents per bushel, amounting to \$120 on the car. We think we will be in the market for three times as many next season. They arrived in good condition and every member was well satisfied with them.—G. W. Barger, Buffalo, Mo.

FOR SALE

Coal for All
We mine the best domestic coal in Colorado. Satisfaction guaranteed. Write us for prices.

Farmers' Coal Company
Colorado Springs, Colo.

ALSIKE CLOVER SEED—12,000 pounds, good; price 14 cents per pound, f. o. b. cars, Tetonia, James R. Hansen, Tetonia, Idaho.

Let Me Tell You How Thousands Of Other Farmers Have Pulled Up Every Stump In Their Fields—and How You Can Do It EASY!

B. A. FULLER

Five Minutes to the Biggest Stump

Let me send you my book to prove it to you. If you have stumpy land or stumps in your fields you're losing big money that rightfully belongs to you. I'll show you how you can turn 40 acres of stumpy land into \$1281.00 profit the very first year and \$750.00 every year after—by doubling the land value and by raising money-crops! The actual photographs and actual letters from hundreds of Hercules owners, as shown in my book, will convince you of the necessity of pulling out the stumps and of the ease with which it is done with the Hercules.

Send in Your Name for My Book and Special Price Proposition

You know how big a nuisance stumps are. You realize how much profit they prevent you from making every year. You know how hard it is to blast them out or grub them. I want to prove to you the superiority of the Hercules over any other known method of getting rid of stumps. And I want to make you a proposition that will be worth while for you to take up. I want you to write me—on the coupon or on a postal. I will tell you how the Hercules has won its way to the top on quality and the service it has rendered. I want to show you letters from far and near—from men who own small farms and big timber-tracts. I want to show you in dollars and cents how much a Hercules means to you and I want to quote you my special price—a price I can only make to the first one or two buyers in each locality.

Pulls an Acre of STUMPS a Day
Guaranteed for 3 Full Years

HERCULES All-Steel Triple Power Stump Puller

Let me tell you a few facts here, about the construction of the Hercules

All-Steel Triple Power

The Hercules is the only all-steel Stump Puller made. It is the only puller that has the single, double and triple power features, giving you three machines in one. There isn't a stump, green tree or hedge grown that the Hercules won't pull out without straining or breaking any castings. It's the only low-down constructed puller that has self-anchoring and stump-anchoring features—the only one with double safety ratchets, that insure the absolute safety of men and team. Let me send you a Hercules on

30 Days' Free Trial

If, at the end of that time, the Hercules isn't everything I have said it is, I want you to send it right back to me, and I'll see that you get every cent of your money back promptly. Thousands and thousands of farmers have ordered on this

plan, and so far less than one out of a thousand have been returned. Besides my thirty-day free trial offer, I absolutely give you the following

3-Year Guarantee

If any casting of your Hercules All-Steel Triple Power Stump Puller breaks, any time within three years, whether the fault is yours or the machine's, I will absolutely replace any such part free of cost to you. There are no conditions to this guarantee whatever. Any casting will be replaced promptly, whether the machine breaks by accident or through any flaw in workmanship or material. Let me say right here, however, every Hercules is tested to terrific strain before it even leaves the factory, so as to guard against any machines being returned, or any parts being returned due to breakage.

The strongest guarantee ever placed on any article for farm use. Made possible only because of the High Quality of Hercules.

Mail Me the Coupon or a Postal

If you write me at once on the coupon below or on a postal, I will reserve one of these machines for you at the special price I am now making, until I hear from you whether or not you are going to buy. Understand, your request for my book is not an order. I simply want to get the book to you at once, so that you can read the remarkable facts about the Hercules All-Steel Triple Power Stump Puller and how it does such splendid work making big profits for owners everywhere. Mail me the coupon or the postal right now before you forget, or take down the name and address and write it as soon as you get a postal card. Address me personally.

NOTICE!

Grand Prize Yellow Strand Wire Rope Used on Hercules Pullers!

It is this Yellow strand wire rope that won first prize at St. Louis Exposition proving twice as good as next best cable. It is this Yellow strand wire rope that has been used by the United States Government at Panama on the real

important work of building the canal. And experts say this Yellow strand rope was one of the big helps that enabled Uncle Sam to complete the canal a whole year before expected. Don't forget—it's the Yellow strand

cable that is showing such wonderful strength—the Yellow strand rope that is beating all others on every test put to it, under all conditions all over the world. And it is the Yellow strand wire rope that is used exclu-

sively on the Hercules Stump Puller—not a green strand, blue strand, white strand or red strand—but a YELLOW strand—don't forget that—and don't let any unscrupulous person or company confuse you.
